We demonstrate a novel technique for time-resolved spectroscopic studies of highly excited ions. The technique uses a laser-produced plasma as a short-pulse, soft-x-ray light source with a high repetition rate. A Nd:YAG laser with a pulse duration of 90 psec, a pulse energy of 70μJ, and repetition rate of 10^4 pulses per second is focused onto a rotating metal target. Soft x rays from the resulting plasma photoionize a gas surrounding the target, and fluorescence from the gas is detected by using a spectrometer and a high-speed photodetector. Using the technique of time-correlated photon counting, we determined the radiative lifetime and collisional quenching rate of the Xe III 5s^{4}5p^6 ^{1}S$_0$ state by observing its fluorescence at 108.9 nm. A time resolution of better than 400 psec was obtained. We also measured relative Auger decay yields of a core hole state in xenon using a higher-energy laser-produced plasma light source at a lower repetition rate.

46450 Efficient two-photon-resonant frequency conversion in mercury: the effects of amplified spontaneous emission. Smith, A.V.; Hadley, G.R.; Esherick, P.; Alford, W.J. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Optics Letters;* **12**: No. 9, 708-710(Sep 1987). Contract AC04-76DP00789.

Numerical modeling of two-photon-resonant sum-frequency mixing in mercury vapor predicts efficiencies >10% for generation of 130.2-nm oxygen resonance light. The modeling indicates that power broadening of the two-photon resonance due to amplified spontaneous emission from the pumped level strongly influences the mixing process. Measurements of the broadening and the efficiencies for difference-frequency mixing are presented as a check of the model calculations.

46451 High brightness ion source: The Penning ringatron. Whealton, J.H.; Stirling, W.L.; Ryan, P.M.; Akerman, M.A.; Becraft, W.R.; Gardner, W.L.; Haselton, H.H.; Rothe, K.E.; Bell, M.A.; Raridon, R.J.; and others. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *AIP (American Institute of Physics) Conference Proceedings;* **158**: No. 1, 404-418(30 Jul 1987). (CONF-8610115—).

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

The design of a high brightness penning ion source is discussed. A cylindrical configuration (RINGATRON) is used. This is shown to improve ion extraction across the magnetic field. It also leads to enhanced production density. Comparisons of the ringatron configuration with the duoplasmatron and the planar penning discharge configuration are made. (AIP)

46452 Transverse-field focussing beam transport experiment. Kwan, J.W.; Ackerman, G.D.; Anderson, O.A.; Chan, C.F.; Cooper, W.S.; Soroka, L.; Steele, W.F. (LBL-22387, Lawrence Berkeley Laboratory, University of California, Berkeley, CA 94720). *AIP (American Institute of Physics) Conference Proceedings;* **158**: No. 1, 507-517(30 Jul 1987). (CONF-8610115—).

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

The Transverse-Field Focussing (TFF) beam transport and accelerator system developed at LBL is useful for negative-ion-based neutral beam injection due to its unique differential pumping and neutron shielding properties. We have tested the first module of our TFF system transporting H^- beams up to 80 keV beam energy. The testing addressed the most crucial physics and engineering issues involved in the principles of a TFF system including beam compression and differential gas pumping. At optimum perveance, the present design will transport 4 A/m of H^- beam at 80 keV beam energy.

46453 Panel session: Transport of negative ion beams. Allison P. (moderator); Holmes, A.J.T.; Lietzke, A.F.; Whealton, J.H.; Wright, L. (LBL-22387, Lawrence Berkeley Laboratory, University of California, Berkeley, CA 94720). *AIP (American Institute of Physics) Conference Proceedings;* **158**: No. 1, 520-533(30 Jul 1987). (CONF-8610115—).

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

Transport of negative ion beams through plasma is reviewed. The effect of space charge on beam stability and beam emittance is discussed. The approaches to the beam transport problem developed at Los Alamos, Berkeley, Oak Ridge and Culham Laboratory are intercompared. (AIP)

46454 Fundamental processes in low energy collisions of alkali anions and atoms. Champion, R.L.; Doverspike, L.D.; Scott, D.M.; Wang, Y. (Department of Physics, College of William and Mary Williamsburg, VA 23185). *AIP (American Institute of Physics) Conference Proceedings;* **158**: No. 1, 536-546(30 Jul 1987). (CONF-8610115—).

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

A summary of observations of collisions of alkali ions with atoms and molecules and collisions of H^- and D^- with alkali atoms is presented. The energy range of the experiments was $5<E<500$ eV. Results on cross sections for collisional electron detachment and charge transfer of negative ions are discussed. (AIP)

46455 High-charge-state plasma neutralizer for an energetic H^- beam. Schlachter, A.S.; Leung, K.N.; Stearns, J.W.; Olson, R.E. (Lawrence Berkeley Laboratory, University of California, Berkeley, CA 94720). *AIP (American Institute of Physics) Conference Proceedings;* **158**: No. 1, 631-642(30 Jul 1987). (CONF-8610115—).

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

A high-charge-state plasma neutralizer for a beam of energetic H^- ions offers the potential of high optimum neutralization efficiency (—85%) relative to a gas target (50—60%), and considerably reduced target thickness. We have calculated cross sections for charge-changing interactions of fast H^- and H^0 in collision with highly charged ions using a semiclassical model for H^-, and the Classical-Trajectory Monte Carlo method plus Born calculations, to obtain correct asymptotic cross sections in the high-energy limit. Charge-state fractions as a function of plasma line density, and f / sup max/$_0$, the maximum H^0 fraction, are calculated using these cross sections; we find that f /sup max/$_0\cong$85% for ion charge states in the range 1+ to 10+, and that target ion line density for f /sup max/$_0$ decreases approximately as the square of the plasma ion charge state. The maximum neutral fraction is also high for a partially ionized plasma. We have built a small multicusp plasma generator to use as a plasma neutralizer; preliminary results show that the plasma contains argon ions with an average charge state between 2+ and 3+ for a steady-state discharge.

46456 Measurement of plasma production and neutralization in gas neutralizers. Maor, D.; Meron, M.; Johnson, B.M.; Jones, K.W.; Agagu, A.; Hu, B. (Brookhaven National Laboratory, Upton, NY 11973). *AIP (American Institute of Physics) Conference Proceedings;* **158**: No. 1, 643-650(30 Jul 1987). (CONF-8610115—).

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

A proposed experiment is described. The aim is to measure cross sections for the charge exchange of H^-, H^0, H^+ projectiles, as well as the cross sections of ion production in the target. Experiments will be performed on many gases to measure differences in neutralization efficiency and plasma production. (AIP)

46457 **Oscillations in photodetachment cross sections for ions in magnetic fields.** Crawford, O.H. (Health and Safety Research Division, Oak Ridge national Laboratory, Oak Ridge, Tennessee 37831-6123). *AIP (American Institute of Physics) Conference Proceedings;* **158**: No. 1, 663-672(30 Jul 1987). (CONF-8610115—).

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

The photodetachment cross section of a charged particle bound in a short range potential is an oscillating function of frequency of incident light, in the presence of a magnetic field. The theory of this effect is described, and calculated cross sections are shown. For photodetachment of electrons from negative atomic ions, this constitutes an additional magnetic field effect beyond the ones associated with fine and hyperfine structure of the ion and atom and with spin of the detached electron.

46458 **Novel high-resolution experimental approach for studying laser photodetachment in a magnetic field.** Krause, H.F. (Oak Ridge National Laboratory, Oak Ridge, TN 37831). *AIP (American Institute of Physics) Conference Proceedings;* **158**: No. 1, 673-681(30 Jul 1987). (CONF-8610115—).

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

The need for new high-resolution photodetachment data is discussed. An E-arrow-right x B-arrow-right photoneutralizer concept that is capable of achieving the resolution required for spectroscopic studies is described. Feasibility of the concept has been evaluated in Monte carlo trajectory studies. The calculations indicate that spectral resolutions in the range 300—30 MHz are achievable in a five-parameter coincidence experiment. These bandwidths are 20 to 200 times narrower than have been achieved heretofore in experiments that used the Penning trap technique. Stray electric fields in the E-arrow-right x B-breve photoneutralizer also are much smaller than those in a trap ($<1/20$). The improved apparatus resolution should allow Landau resonances to be studied at magnetic field strengths well below those used previously.

46459 **Ion-X-ray coincidence measurements in heavy ion collisions.** Graham, W.G.; Bernstein, E.M.; Clark, M.W.; Tanis, J.A.; Berkner, K.H.; Schlachter, A.S.; Stearns, J.W.; Johnson, B.M.; Jones, K.W.; Meron, M. (Ulster Univ., Coleraine, England; Western Michigan Univ., Kalamazoo; Lawrence Berkeley Lab., CA; Brookhaven National Lab., Upton, NY). *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment;* **24/25**: No. 1, 69-73(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

X-ray emission associated with projectile charge-changing events in fast ion-atom collisions can be used to isolate and investigate excitation, ionization and charge transfer, as well as combinations of these processes. The major emphasis to date has been on the study of two-electron processes. Several such processes have been studied in detail. Resonant and nonresonant transfer and excitation (RTE and NTE) occur when electron capture and projectile excitation, with stabilization by X-ray emission, take place together in a single collision. Loss and excitation (LE) occurs when a projectile electron is removed and the ion is excited in a single collision. The cross sections for loss and excitation have been measured for a wide range of highle stripped projectiles over a broad energy range. The results shed light on projectile K X-ray production processes in heavy-ion collisions. The use of ion X-ray coincidence techniques in exploring these and other collision processes will be discussed.

46460 **Ionization and charge transfer in high-energy ion-atom collisions.** Schlachter, A.S.; Berkner, K.H.; Stearns, J.W.; Graham, W.G.; Bernstein, E.M.; Clark, M.W.; Tanis, J.A.; Schmidt-Boecking, H.; Kelbch, S.; Ullrich, J. (Lawrence Berkeley Lab., CA; Ulster Univ., Coleraine, England; Western Michigan Univ., Kalamazoo; Frankfurt Univ., Germany, F.R.). *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment;* **24/25**: No. 1, 219-223(Apr 1987). (CONF-861114—). Contract AC03-76SF00098;AC02-83ER13116.

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

Electron capture and loss by fast highly charged ions in a gas target, and ionization of the target by passage of the fast projectile beam, are fundamental processes in atomic physics. These processes, along with excitation, can be exerimentally studied separately (singles) or together (coincidence). This paper is a review of recent results on singles measurements for electron capture and loss and for target ionization, for velocities which are generally high relative to the active electron, including recent ionization measurements for a nearly relativistiv projectile.

46461 **Simple formula for the energies of doubly excited states.** Lin Chiidong; Watanabe, S. (Argonne National Lab., IL; Observatoire de Paris, France). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 284-287(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

A simple formula for the energy levels of doubly excited states of atoms and multiply charged ions is derived and expressed in terms of a set of new correlation quantum numbers. The accuracy of the formula is checked by comparing with the results from other elaborate calculations. Modification of the formula for doubly excited states of multielectron atoms are also presented.

46462 **Autodetachment spectroscopy of metastable negative ions.** Kvale, T.J.; Alton, G.D.; Compton, R.N.; Thompson, J.S.; Pegg, D.J. (Oak Ridge National Lab., TN; Tennessee Univ., Knoxville). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 325-328(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

This paper is a review of some of our recent measurements on the metastable negative ions, Be^- and He_2^-, using the technique of fast-beam autodetachment spectroscopy.

46463 **Remarks about fields of high intensity.** Teller, E. (Lawrence Livermore National Lab., CA). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 1-2(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

At high field strength any known material will break down by the production of electrons and ions. At a higher field strength, massive production of pairs will occur. This phenomenon is discussed when heavy ions of $\gamma \approx 100$ collide. Even when the heavy ions approach to within one nuclear radius, pair production involving electrons and mesons must be expected. High magnetic fields between the nuclei might be coupled to pairs of magnetic monopoles.

46464 **Atomic physics experiments with stored cooled heavy ion beams.** Datz, S. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 3-10(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

The wide ranging interest in the development of heavy ion synchrotrons with electron beam cooling is evident from the

number of projects presently under way. Although much of the initial motivation for these rings stemmed from nuclear and particle physics, a considerable amount of atomic physics experimentation is planned. This paper surveys some of the new opportunities in atomic physics which may be made available with storage ring systems.

46465 **Electron capture in ion-molecule collisions at intermediate energy.** Kimura, M. (Argonne National Lab., IL; Rice Univ., Houston, TX). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 101-105(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

Recent progress in theoretical studies on charge transfer in ion-molecule collisions at the intermediate energy is reviewed. Distinction between close and distant collisions is crucial to the understanding of charge transfer processes, as it is in many aspects of ion-atom collisions. For a close collision, explicit representation of the whole collision complex is necessary to describe the collision dynamics correctly, while a model potential approach for the molecule is appropriate for a distant collision. It is shown that these two distinct points of view are necessary for reproducing experimental charge transfer cross sections. Some remarks concerning further theoretical study of ion-molecule collisions are also given.

46466 **Evidence for correlated double-electron capture in slow collisions of multicharged ions with He and H_2.** Meyer, F.W.; Havener, C.C.; Phaneuf, R.A.; Swenson, J.K.; Shafroth, S.M.; Stolterfoht, N. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 106-110(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

Also published as report CONF-861114—14–6.

High resolution measurements of the production of $L_1L_{23}X$ Coster-Kronig and LMX-Auger electrons in slow collisions of C^{4+}, N^{5+}, O^{6+}, and O^{7+} with He and H_2 have been performed, using the method of 0° Auger spectroscopy. For the latter three projectiles, strong Coster-Kronig lines are observed, which are attributed to the configurations (core)2pnl, produced by double-electron capture. It is argued that production of these nonequivalent electron configurations must involve electron-electron correlation. From a comparison of the production cross sections for these Coster-Kronig electrons and the LMX-Auger electrons, it is further argued that correlation plays a significant role in two-electron transfer processes.

46467 **Surgery of fast, highly charged ions studied by zero-degree Auger spectroscopy.** Stolterfoht, N.; Miller, P.D.; Krause, H.F.; Yamazaki, Y.; Swenson, J.K.; Bruch, R.; Dittner, P.F.; Pepmiller, P.L.; Datz, S. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 168-172(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

Zero-degree Auger spectra were measured for the projectile in collisions of oxygen and carbon on He with incident charge states of q=2-5 and for energies from 5 to 30 MeV. Since the light target particle He acts selectively on the projectile ion, we refer to the present method as ion sugery. Apart from the one-electron processes of single excitation and single loss, two-electron processes such as transfer excitation and transfer loss are studied.

46468 **Recent studies of simultaneous ionization and charge transfer in helium ion-atom collisions.** DuBois, R.D. (Battelle Pacific Northwest Labs., Richland, WA). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 209-213(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

In our laboratory, we are interested in ionization of atomic and molecular targets induced by light ion impact. Generally these collisions are studied by monitoring the ejected electron spectra with the assumption that each ionizing event leads to a single secondary electron. By measuring the target ionization charge states produced by directly ionizing and charge changing collisions, we have obtained cross sections for direct ionization, pure charge transfer, and charge transfer plus ionization thus making it possible to distinguish how target ionization occurs. It was found that charge transfer plus ionization can sometimes be more probable than pure charge transfer alone. This is important because one mechanism which has until recently been disregarded as a means of producing free electrons is the possibility of capturing an electron from the target and simultaneously ionizing one or more target electrons. For ion impact velocities comparable to, or less than, the outer shell bound electron velocities, we have found that charge transfer plus ionization can be a substantial, if not principal, means of producing free electrons.

46469 **Measured multipole moments of continuum electron transfer angular distributions.** Elston, S.B. (Tennessee Univ., Knoxville; Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 214-218(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

The velocity space distribution of electrons emitted near the forward direction from collisions involving fast, highly stripped oxygen ions with gaseous and solid targets is presented and described in terms of multipole moments of the ejected charge distribution, which permits direct comparison with recent theory. The measurements are produced by employing position-sensitive electron detection to combine emission angle definition with conventional electrostatic spectrometry. Agreement obtained between theory and distributions observed for binary continuum electron loss processes coupled with a similar multipole content observed with solid targets suggests a model of convoy electron production dominated by electron loss from the projectile within the bulk of the target. Further, the connection between multipoles of the projectile electron emission distribution in single collisions and the state of excitation of that projectile excited states may provide the basis for a probe of the state of ions traversing bulk solid mattter.

46470 **Calculations of coincident ionization plus excitation.** Becker, R.L. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 256-260(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

For Li- nd Be-like ions, K X-ray yields, together with detection that the ionic charge has increased, give the cross section for ionization plus excitation (IE), a process which can exhibit electron-electron correlations. Measurements of IE for $_{14}Si^{11+}$ + He stimulated our coupled-channels calculations in the independent-Fermi-particle model (IFPM), which includes Pauli correlations. We discuss how the IFPM expressions, generalized here to include an open shell, differ from those for distinguishable electrons. The sensitivity of σ/sub IE/ to correlations is shown. Recent additional measurements and future ones giving excitation functions for resolved configurations and complementary Auger data will provide even more sensitive tests of collisional correlation theory.

46471 **Angular distributions of very low energy recoil ions.** Gonzalez Lepera, C.E.; Breinig, M.; Burgdoerfer, J.; DeSerio, R.; Elston, S.B.; Gibbons, J.P.; Huelskoetter, H.P.; Liljeby, L.; Short, R.T.; Vane, C.R. (Tennessee Univ., Knoxville; Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 316-320(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

We present the first measurements of the angular distribution of recoil ions near 90° with respect to the incident projectile direction. Beams of 22.5 and 33 MeV chlorine ions (incident charge states q = 4, 5, 8) have been used as hammer beams incident on Ne

atoms. We do not confirm the long standing assumption that these recoil ions are ejected preferentially at angles very near 90° with respect to the primary beam direction, although they do have energies typically less than 5 eV. Recoil ions ejected around 90° have an energy distribution appreciably wider than those ejected at either larger or smaller angles.

46472 **Ion-X-ray coincidence measurements in heavy ion collisions.** Graham, W.G.; Bernstein, E.M.; Clark, M.W.; Tanis, J.A.; Berkner, K.H.; Schlachter, A.S.; Stearns, J.W.; Johnson, B.M.; Jones, K.W.; Meron, M. (Ulster Univ., Coleraine, England; Western Michigan Univ., Kalamazoo; Lawrence Berkeley Lab., CA; Brookhaven National Lab., Upton, NY). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 69-73(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

X-ray emission associated with projectile charge-changing events in fast ion-atom collisions can be used to isolate and investigate excitation, ionization and charge transfer, as well as combinations of these processes. 46474 **Production and neutralization of negative ions and beams.** Alessi, J.G. (ed.). New York, NY; American Institute of Physics (1987). 774p. (CONF-8610115—). Series Editor, AIP Conference Proceedings, American Institute of Physics, 335 E. 45th St., New York, NY 10017 $72.50. File Number TI87014224. Contract AC02-76CH00016.

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

Contained in this book are a collection of papers from the conference proceedings on the production and neutralization of negative ions and beams. Papers are grouped together in the following areas: fundamental processes, source diagnostics, H^- sources, H^- production and beam formation, transport of negative ion beams, production of other negative ions, neutralization, and systems and applications. (LSP)

46475 **Tau electron atoms at RHIC.** Weiss, M.S. (Physics Dept., Lawrence Livermore National Lab., Livermore, CA 94550). pp 769-780 of Phase space approach to nuclear dynamics. Di Toro, M.; Norenberg, W.; Rosina, M.; Stringari, S. Teaneck, NJ; World Scientific Pub. Co. (1985). (CONF-8509227—).

From IAEA topical meeting on phase space approach to nuclear dynamics; Trieste, Italy (30 Sep 1985).

An amusement ancillary to the proposed quark-gluon plasma production hypothesized from a relativistic heavy ion collider (RHIC is a sufficient quantity of tau electrons to potentially admit the study of its exotic atoms. In this paper the given wealth of nuclear phenomena is derived from muonic atoms assume a tau atom is more forthcoming of information due to the lower orbits entirely contained within the nucleus. It is the purpose of this brief note to discuss the production mechanism at a RHIC and to delineate some of the more obvious properties of the tau atom. As in the case of the mu, more exotic phenomena derived from resonance "accidents" with nuclear transitions takes place, but it would be presumptions to discuss them at this time. Given the complete containment in nuclear matter of the tau lepton in its innermost atomic orbits. An experiment performed with such an exotic species results in the measurement of its lifetime.

46476 **(DOE/ER/25009—424) Dynamical grid optimization for Lagrangian hydrodynamics.** Williams, R.D. (California Inst. of Tech., Pasadena (USA)). 1985. Contract FG03-85ER25009. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013499.

Lagrangian hydrodynamics exchanges the difficulty of convective derivatives for the difficulty of a mesh whose vertices move with the fluid. To prevent numerical instability, the mesh must be continually restructured to optimize the condition number of its stiffness matrix. This optimization problem is further complicated because the restructuring itself introduces undesirable numerical diffusion; we must try to find a good mesh with the fewest possible moves. I report the implementation of an algorithm for dynamical optimization of a triangular mesh using three elementary operations, and give various measures of its performance. I also discuss the extension of these methods to distributed memory parallel computers, where a dynamical load-balancer could be introduced as a fourth restructuring operation.

46477 **(LA-UR—87-1627) Dimension densities for turbulent systems with spatially decaying correlation functions.** Mayer-Kress, G.; Kurz, T. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 11p. (CONF-8610281—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87010119.

From Modern approaches to large nonlinear physical systems workshop; Santa Fe, NM, USA (27 Oct 1986).

The introduction of nonlinear, deterministic, and low-dimensional dynamical systems with chaotic solutions led to many conjectures about how these chaotic systems might be related to fluid turbulence. It appears that the time series, produced by a chaotic solution can be as complex as experimentally observed signals from turbulent hydrodynamics. Furthermore, certain transitions from laminar to turbulent flow have their analog in the transition from ordered to chaotic behavior of deterministic chaotic systems. A basic problem in this context is how far methods from nonlinear dynamical systems can be used to describe experimental turbulence. A frequent objection to the approach of using simple dynamical systems as models for turbulence is that these models might reproduce some temporal chaos but would not correspond to real turbulence, for which the spatial structure also is very irregular and chaotic. The dynamics of a turbulent flow are not expected to be spatially coherent and therefore cannot be described by a few global modes. In the following we use the simplest of coupled maps in order to test the applicability of some ideas which should make it possible to estimate the number of degrees of freedom per unit length of a system which is spatially incoherent. This is done by

computing the dimension density of the lattice system through a series of two-point measurements at separated lattice points. Then we compare these results with the spatial decay of the correlation function and also of the mutual information content. We find a qualitative agreement with the expected dependence. For precise quantitative measurements the general problem of accuracy and data limitations appear to become dominant.

46478 **(LA-UR—87-1862) PIC [Particle-in-Cell] and its progeny.** Harlow, F.H. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 17p. (CONF-8704168—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87011794.

From Workshop on particle methods in fluid dynamics and plasma physics; Los Alamos, NM, USA (13 Apr 1987).

The Particle-in-Cell (PIC) method was developed to solve numerically for the strongly contorting dynamics of several materials in two or three space dimensions. Related numerical techniques with Lagrangian marker particles are also discussed in this brief survey. An extensive bibliography lists many of the earlier publications describing these techniques.

46479 **(LA-UR—87-2524) Lattice gas hydrodynamics in two and three dimensions.** Frisch, U.; d'Humieres, D.; Hasslacher, B.; Lallemand, P.; Pomeau, Y.; Rivet, J.P. (Los Alamos National Lab., NM (USA); Observatoire de Nice, 06 (France); SEE CODE- 2271000 Ecole Normale Superieure, 75 - Paris (France). Lab. de Physique). 1986. Contract W-7405-ENG-36. 56p. (CONF-8610281—2). NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87013167.

From Modern approaches to large nonlinear physical systems workshop; Santa Fe, NM, USA (27 Oct 1986).

Hydrodynamical phenomena can be simulated by discrete lattice gas models obeing cellular automata rules (U. Frisch, B. Hasslacher, and Y. Pomeau, Phys. Rev. Lett. 56, 1505, (1986); D. d'Humieres, P. Lallemand, and U. Frisch, Europhys. Lett. 2, 291, (1986)). It is here shown for a class of D-dimensional lattice gas models how the macrodynamical (large-scale) equations for the densities of microscopically conserved quantities can be systematically derived from the underlying exact "microdynamical" Boolean equations. With suitable restrictions on the crystallographic symmetries of the lattice and after proper limits are taken, various standard fluid dynamical equations are obtained, including the incompressible Navier-Stokes equations in two and three dimensions. The transport coefficients appearing in the macrodynamical equations are obtained using variants of fluctuation-dissipation and Boltzmann formalisms adapted to fully discrete situations.

46480 **(LA-UR—87-2554) Phase dynamics: A review and a perspective.** Brand, H.R. (Los Alamos National Lab., NM (USA); Essen Univ. (Gesamthochschule) (Germany, F.R.)). 1987. Contract W-7405-ENG-36. 33p. (CONF-8703165—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013173.

From Workshop on propagative nonequilibrium patterns; Les Houches, France (1 Mar 1987).

The present status of phase dynamics, the analogue of hydrodynamics for large aspect-ratio pattern forming non-equilibrium systems has been reviewed. Low frequency, long wavelength excitations in systems such as the regular patterns which arise in the Taylor instability (a simple fluid in the gap between two concentric cylinders was subjected to a torque by rotating the inner or both cylinders) or the Benard instability (a thin layer of fluid heated from below) has been examined and the question of nonlinear excitations such as solitary waves addressed. The connection between the phenomenological parameters arising in the phase equations and results obtained from amplitude equations valid close to the onset of a specific pattern were investigated. Suggestions for experiments to test further the concept of phase dynamics have also been included.

46481 **(UCRL—96835) Locating parallel numerical tasks in the solution of viscous fluid flows.** Rodrigue, G.; Perkins, A.L. (Lawrence Livermore National Lab., CA (USA); California Univ., Davis (USA)). 14 Jul 1987. Contract W-7405-ENG-48. 20p. (CONF-8706181—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013510.

From 4. Deutsche Forschungs-und Verschesanstalt Fur Fult- und Raumfahart conference; Koln, F.R. Germany (25 Jun 1987).

A parallel processing technique is presented for the two dimensional heat equation. The solution is considered for a small time interval with an initial condition that possesses a sharp gradient.

46482 **Stability and bifurcation of a rotating planar liquid drop.** Lewis, D.; Marsden, J.; Ratiu, T. (Department of Mathematics, University of California, Berkeley, California 94720). *Journal of Mathematical Physics (New York);* **28**: No. 10, 2508-2515(Oct 1987).

The stability and symmetry breaking bifurcation of a planar liquid drop is studied using the energy-Casimir method and singularity theory. It is shown that a rigidly rotating circular drop of radius r with surface tension coefficient tau and angular velocity $\Omega/2$ is stable if $(\Omega/2)^2 < 3\text{tau}/r^3$. A new branch of stable rigidly rotating relative equilibria invariant under rotation through π and reflection across two axes bifurcates from the branch of circular solutions when $(\Omega/2)^2 = 3\text{tau}/r^3$.

46483 **Cusp map in the complex-frequency plane for absolute instabilities.** Kupfer, K.; Bers, A.; Ram, A.K. (Research Laboratory of Electronics and Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physics of Fluids;* **30**: No. 10, 3075-3082(Oct 1987).

It is well known that absolute instabilities can be located by prescribed mappings from the complex-frequency plane to the wavenumber plane through the dispersion relation $D(\omega,k) = 0$. However, in many systems of physical interest the dispersion relation is polynomial in ω while transcendental in k, and the implementation of this mapping procedure is particularly difficult. If one maps consecutive deformations of the Fourier integral path (originally along the real k axis) into the ω plane, points having (partialD/partialk) = 0 are readily detected by the distinctive feature of their local maps. It is shown that a simple topological relationship between these points and the image of the real k axis determines the stability characteristics of the system, without mapping from the ω plane back into the k-plane.

46484 **Long-wave instability of periodic flows at large Reynolds numbers.** Libin, A.; Sivashinsky, G.; Levich, E. (Department of Mathematical Sciences, Tel Aviv University, Ramat Aviv, Tel Aviv 69978, Israel). *Physics of Fluids;* **30**: No. 10, 2984-2986(Oct 1987).

It is shown that simple unidirectional and helical periodic flows are unstable to long-wave perturbations at large Reynolds numbers. Consideration is given to the cases of periodic flow sustained by an applied force and periodic flow freely decaying owing to viscosity.

46485 **Pressure gradient alignment with strain rate and scalar gradient in simulated Navier—Stokes turbulence.** Ashurst, W.T.; Chen, J.; Rogers, M.M. (Combustion Research Facility, Sandia National Laboratory, Livermore, California 94550). *Physics of Fluids;* **30**: No. 10, 3293-3294(Oct 1987).

In a simulated turbulent shear flow the pressure gradient caused by velocity fluctuations alone has increased probability for alignment with the most compressive strain direction, which is similar to passive scalar-gradient behavior. The pressure-gradient component depending on the mean shear indicates no correlation with the strain directions.

46486 **Errors for calculations of strong shocks using an artificial viscosity and an artificial heat flux.** Noh, W.F. (Lawrence Livermore National Laboratory, P.O. Box 808, University of California, Livermore, California 94550). *Journal of Computational Physics;* **72**: No. 1, 78-120(Sep 1987). Contract W-7405-ENG-48.

The artificial viscosity (Q) method of von Neumann and Richtmyer is a tremendously useful numerical technique for following shocks wherever and whenever they appear in the flow. We show that it must be used with some caution, however, as serious Q-induced errors (on the order of 100%) can occur in some strong

shock calculations. We investigate three types of Q errors: 1. Excess Q heating, of which there are two types: (a) excess wall heating on shock formation and (b) shockless Q heating; 2. Q errors when shocks are propagated over a nonuniform mesh; and 3. Q errors in propagating shocks in spherical geometry. As a basis of comparison, we use as our standard the Lagrangian formulation with Q = C²₀rhol²(u/sub x/)². This standard Q is compared with Noh's (Q & H) shock-following method, which employs an artificial heat flux (H) in addition to Q, and with the (non-Q) piecewise-parabolic method (PPM) of Colella and Woodward. Both the (Q & H) method and PPM (particularly when used with an adaptive shock-tracking mesh) give superior results for our test problems. In spherical geometry, Schulz's and Walen's tensor Q formulations of the hydrodynamic equations prove to be more accurate than the standard Q formulation, and when Schulz's formulation is combined with Noh's (Q & H) method, superior results are achieved. Copyright 1987 Academic Press, Inc.

46487 **Fluid modeling of magnetized plasmas.** Brackbill, J. (Los Alamos National Lab., NM). *Space Science Reviews;* **42**: 153-167(1985).

The simplified description given by fluid models of magnetized plasmas makes it possible to simulate large scale problems such as the interaction of the solar wind with the earth's magnetic field. However, the accurate numerical solution of the fluid equations is made more difficult by the singular nature of the flow when magnetic reconnection occurs. During substorms, for example, details of small features of the flow in the magnetotail appear to cause changes in the global solutions. New methods for treating singular problems have been developed. Some of these are reviewed, including adaptive meshes and other tricks taken from fluid calculations. Several illustrative problems are described. 16 references, 6 figures.

46488 **(DOE/ER/40319—1) [Research in elementary particle physics]: Progress report covering the period from August 1, 1986 to July 31, 1987.** (Florida State Univ., Tallahassee (USA). Dept. of Physics). 1987. Contract FG05-87ER40319. 49p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013902.

In this document the High Energy Physics Group reviews its accomplishments and progress during the past year and presents plans for continuing research during the next several years. Reviewed are the experimental programs such as the collider experiments, the particle theory programs such as vector boson production in supersymmetric QCD and miscellaneous program projects. (LSP)

46489 **Aspen Winter Physics Conference, 1st, Aspen, CO, Jan. 6-19, 1985, Proceedings.** Block, M.M. (Northwestern Univ., Evanston, IL). *Annals of the New York Academy of Sciences;* **461**: vp(Mar 1986). (CONF-850146—).

From Aspen winter physics conference; Aspen, CO, USA (14 Jan 1985).

The physics of ultrahigh-energy colliders and of electroweak interactions is explored in reviews and reports of theoretical and experimental investigations. Topics examined include high-energy multijets in hadron-hadron collisions, the top quark, heavy-quark production at the CERN proton-antiproton collider, multiplicities in high-energy interactions, and supergravity and superstrings. Consideration is given to cosmological constraints on particle physics, the LEP and SLC programs, precision measurements of the electroweak mixing angle, neutrino oscillation studies with reactor antineutrinos, proton decay, searches for magnetic monopoles, and electron-positron electroweak experiments.

46490 **(BNL—40139) Some recent results on meson spectroscopy.** Chung, S.U. (Brookhaven National Lab., Upton, NY (USA); Geneva Univ. (Switzerland). Dept. de Physique Nucleaire et Corpusculaire). 1 Jun 1987. Contract AC02-76CH00016. 13p. (CONF-870413—9). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014285.

From 11. international conference on particles and nuclei; Kyoto, Japan (20 Apr 1987).

A comparative survey of established meson states with the predictions of a q anti q (quarkonium) model by Godfrey and Isgur shows that most meson states are well described, from pion to Y(6S). However, a number of states in the light- quark isoscalar sector are not predicted at all in their model, pointing to a need for glueballs, hybrids and multi-quark states to fully account for recently reported meson states. 48 refs.

46491 (BNL—52079, pp 15-24) **Neutrino oscillations at accelerators past results, future prospects.** Vannucci, F. (Universite Paris, France). 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

Are neutrinos massive? This is one of the most fundamental questions still facing physicists, which does not necessitate a new jump in energy. This answer is probably within reach of present machine. Among the various manifestations of massive neutrinos, oscillations are the most sensitive. They already test masses below the 1 eV level. Present results are summarized and future prospects outlined.

46492 (BNL—52079, pp 25-38) **Search for neutrino oscillations.** Astier, P. (LPNHE, Paris, France). 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

The present paper reports on preliminary results from the E 816 experiment at Brookhaven National Laboratory. E 816 is the continuation of a 1984 experiment (PS 191) which was devoted to a neutrino decay search in the CERN PS neutrino beam. No candidate was seen, but a study of neutrino interactions in the calorimeter indicated an anomalous electron production. The statistics was too low and the experiment has been rerun in spring 86 at BNL to look specifically, with an improved detector for nu/sub e/ arising from a low energy nu/sub μ/ beam. The results presented here are preliminary. This report starts with a description of the apparatus, followed by the data analysis. Questions are raised at the end concerning possible interpretations of their results which include many single nu/sub e/ events.

46493 (BNL—52079, pp 39-58) **Search for neutrino oscillations at the AGS with the narrow band beam.** Chi, C.; Kondakis, N.; Lee, W.; Rubin, B.; Seto, R.; Stoughton, C.; Tzanakos, G.; O'Brien, E.; O'Halloran, T.; Reardon, K.; Salman, S. (Columbia Univ., NY). 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

The authors have taken neutrino data with the NBB at BNL, in the summer and fall of 1985, and with the WBB in the spring of 1986. They are in the process of completing the analysis of the NBB data. In this paper they present preliminary results of this analysis. They observe an anomalous appearance of electron neutrinos above the expected background.

46494 (BNL—52079, pp 59-66) **Search for nu/sub μ/ → nu/sub e/ oscillations using the E734 detector.** Murtagh, M.J. 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

No evidence for nu/sub μ/ $\rightarrow$ nu/sub e/ oscillations is observed in an experiment in the wide band beam at Brookhaven National Laboratory using the E734 neutrino detector. The 90% confidence level limits obtained are $\sin^2 2\alpha \leqq 3.4 \times 10^{-3}$ in the large mass difference limit and $\Delta m^2 \sin 2\alpha < 0.43 eV^2$ in the small mass difference limit.

46495 (BNL—52079, pp 67-76) **Neutrino oscillations in BEBC.** Baldo-Ceolin, M. (Dipartimento di Fisica dell'Universita, Padova, Italy). 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

New experimental results on neutrino oscillations from experiments performed at the CERN PS using BEBC are presented. The experimental set up, event selection and data analysis are discussed. The flux of electron neutrinos detected was not in excess of that expected from background. Therefore the present data show no evidence for neutrino oscillation.

46496 (BNL—52079, pp 77-79) **Searches for neutrino oscillations.** Zacek, V. (CERN, Geneva, Switzerland). 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

Two searches for evidence of neutrino oscillation have been performed by the CHARM Collaboration looking for the appearance of nu/sub e/ in nu/sub μ/ beams. In the first one two similar detectors were exposed to the low-energy PS neutrino beam. This experiment was sensitive to small differences of the neutrino masses, and a limit of $\Delta m^2 \leqq 0.19 eV^2$ was obtained at 90% c.l. in the case of complete mixing. A second search was performed at the high-energy SPS neutrino beam. The higher statistics allowed sensitivity to mixing angles as low as sin^2theta = 0.005 (90% c.l.).

46497 (BNL—52079, pp 81-85) **Future long baseline nu/sub μ/ $\rightarrow$ nu/sub e/ oscillation searches at accelerators.** Murtagh, M.J. 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

The additional neutrino flux available when the Booster at the AGS becomes operational will make possible nu/sub μ/ $\rightarrow$ nu/sub e/ oscillation searches at Brookhaven which significantly extend beyond the present limits. Present nu/sub μ/ $\rightarrow$ nu/sub e/ oscillation searches at accelerators are limited by their L/E/sub nu/ range (0.1-1) to $\Delta m^2 \geqq 0.1 eV^2$ and $\sin^2 2\alpha \geqq 5 \times 10^{-3}$. It appears possible with the advent of the Booster to significantly improve the Δm^2 range to perhaps $\Delta m^2 \leqq 0.01 eV^2$ while maintaining reasonable $\sin^2 2\alpha$ coverage. However for a reasonable amount of Booster running ($\approx 10^{20}$ POT) with a modest detector (1 Kton fiducial volume), it will be difficult with distances greater than 10 Km to retain acceptable $\sin^2 2\alpha$ coverage.

46498 (BNL—52079, pp 187-194) **Elastic scattering of muon neutrinos at B.N.L.** Abe, K.; Ahrens, L.A.; Amako, K.; Aronson, S.H.; Beier, E.W.; Callas, J.L.; Cutts, D.; Diwan, M.; Durkin, L.S.; Gibbard, B.G.; Heagy, S.M. 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

In this paper measurement of the purely leptonic reactions: nu/sub μ/e $\rightarrow$ nu/sub μ/e and anti nu/sub μ/e $\rightarrow$ anti nu/sub μ/e, and the semileptonic reactions: nu/sub μ/p $\rightarrow$ nu/sub μ/p are presented and discussed in terms of the standard model. The data also places limits of interest on the magnitudes of a possible neutrino charge radius and a neutrino magnetic moment. The data reported here were taken at the Brookhaven National Laboratory Alternate Gradient Synchrotron (A.G.S.) in a 170 ton, fine-grained target detector.

46499 (BNL—52079, pp 221-230) **Second class current effects in tau lepton decay?.** Derrick, M. (Argonne National Lab., IL). 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—). Contract W-31-109-ENG-38.

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

The establishment of a second class current could be an indication of a so far unexplored Higgs sector and would be a major contribution to physics. Several searches for the effects of second class vector and axial vector currents in tau lepton decay are reviewed. Results from BNL, PEP, DORIS and the ARGUS collaboration are presented. Results to date are inconclusive but several groups are actively pursuing the issue.

46500 (BNL—52079, pp 233-247) **Summary and conclusions.** Merritt, F.S. (Univ. of Chicago, IL). 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

The author reviews some of the results presented at the workshop. He emphasizes systematic errors in the experiments and discusses ways of resolving discrepancies. Results considered include solar neutrino observations, CERN PS experiments and preliminary data from BNL experiments. He concludes with descriptions of two proposed future experiments: tagged neutrino experiments and long base line experiments.

46501 **(CONF-870797—1) Properties of e^+e^- interactions at $\sqrt{s}$ = 50 and 52 GeV.** (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA)). Jul 1987. Contract AS05-80ER10713. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014183.

From International symposium for lepton and photon interactions at high energy; Hamburg, F.R. Germany (27 Jul 1987).

Bhabha scattering and multi-hadronic e^+e^- annihilation events have been observed in the AMY detector at $\sqrt{s}$ = 50 GeV and $\sqrt{s}$ = 52 GeV at the TRISTAN e^+e^- storage ring. Here we report the results of a preliminary analysis of the properties of these events. We present results for the $e^+e^- \rightarrow e^+e^-$, $e^+e^- \rightarrow \gamma\gamma$ and $e^+e^- \rightarrow \mu^+\mu^-$ differential cross sections as well as for R, the ratio of e^+e^- annihilation into hadrons to that for dimuons. In addition we present results on the characteristics of the final state hadrons in the annihilation events.

46502 **(DOE/ER/03130—30) The determination of the weak neutral current coupling constants and limits on the electromagnetic properties of the muon neutrino.** Callas, J.L. (Brown Univ., Providence, RI (USA). Dept. of Physics). May 1987. Contract AC02-76ER03130. 139p. (COO—3130TC-30). NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87014474.

The goal of this thesis is to determine experimentally the cross section for nu/sub μ/e $\rightarrow$ nu/sub μ/e scattering from a sample of over 100 expected nu/sub μ/e $\rightarrow$ nu/sub μ/e events collected by the E734 neutrino detector in BNL wide band neutrino beam. By combining these results with results from an anti-neutrino determination of the cross section for anti nu/sub μ/e $\rightarrow$ anti nu/sub μ/e scattering in the form of a ratio of cross sections, the weak coupling constants for the electron, g/sub V/ and g/sub A/ can be determined in a model independent way to within a four fold ambiguity where three of the ambiguities can be eliminated by results from e^+e^- experiments. The predictions of the Standard Model for the weak coupling constants can then be tested and a precise determination of the electroweak mixing parameter, $\sin^2 \theta$/sub W/ can be made.

46503 **(DOE/ER/03539—42) The search for neutrino oscillations in the appearance mode nu/sub μ/ $\rightarrow$ nu/sub e/ for neutrino energies near the muon threshold.** Huang, Ying-Chiang. (Temple Univ., Philadelphia, PA (USA). Dept. of Physics). Dec 1986. Contract AC02-76ER03539. 235p. (COO—3539-42). NTIS, PC A11/MF A01; 1; GPO Dep. File Number DE87013460.

To investigate the possibility of neutrino oscillation, a search for the exclusive mode, nu/sub μ/ → nu/sub e/, was performed at LAMPF. The reactions studied were nu/sub μ/ + C → μ^- + X; μ^- → e^- + anti nu/sub e/ + nu/sub μ/, and nu/sub e/ + C → e^- + X (if nu/sub μ/ → nu/sub e/). The detector was located at an effective distance of 20 m from the water target. The beam was composed primarily of muon-neutrinos from pion decay, and the neutrino flux (of mean energy 150 MeV) was computed to be 6.2 x 10^5 nu/cm^2-sec for 20 μA of proton beam on our target. We saw no evidence for oscillations, and were able to set upper limits $\sin^2(2\Theta) \leq 8.8 \times 10^{-3}$ (90% C.L.) (in the limit of large Δm^2) and $\Delta m^2 \sin(2\Theta) \leq 0.59$ eV^2 (in the limit of small Δm^2).

46504 (DOE/ER/03539—46) A search for the C-nonvariant decay $\pi 0 \rightarrow 3\gamma$. McDonough, J. . (Temple Univ., Philadelphia, PA (USA). Dept. of Physics). May 1987. Contract AC02-76ER03539. 139p. (COO—3539-46). NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87013919.

A new experimental search for the C-violating decay $\pi^0 \rightarrow 3\gamma$ has been undertaken using the Crystal Box detector at the Clinton P. Anderson Meson Physics Facility (LAMPF). The observation of this decay mode would indicate that the electromagnetic interaction of hadrons is not invariant under charge conjugation. No 3γ events in excess of background were observed. The 90% confidence level upper limit is lowered to 3.1 x 10^{-8}.

46505 (DOE/ER/10713—8B) Studies of e^+e^- interactions: Progress report, August 1, 1986-July 31, 1987. Abashian, A.; Gotow, K. (Virginia Polytechnic Inst. and State Univ., Blacksburg (USA)). Aug 1987. Contract AS05-80ER10713. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013951.

This paper deals with the activities of the Virginia Tech group for the period of September, 1986 to September, 1987. With the completion of testing of the electromagnetic shower counter in particle beams at the KEK PS in July, attention shifted to preparation and assembly of the detector into its final configuration and to making the detector operational. Later, after shakedown and with the running of the experiment, a second shift occurred in which analysis of physics data became dominant.

46506 (DOE/ER/40130—T2) [Search for neutrino oscillation and measurement of neutrino-nucleus cross sections]: Technical progress report, 15 January 1987 through 15 July 1987. Koetke, D.D. (Valparaiso Univ., IN (USA)). 15 Jul 1987. Contract AC02-84ER40130. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013391.

This report discusses the progress on experiments done at Valparaiso University, New Mexico. The topics covered are: design and development on pion focusing magnets for improved muon neutrino beams, search for the yet unobserved decay, $\mu^+ \rightarrow e^+\gamma$, and analysis of data from the LAMPF accelerators on muon neutrino oscillations. (LSP)

46507 (IFVE-OEIPK—86-54) Systematics of the transverse momentum distributions and azimuthal correlations in K/sup +/p inclusive reactions at 32 GeV/c. Tomaradze, A.G.; Uvarov, V.A.; Shlyapnikov, P.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703101.

Submitted to the journal Sov. J. Nucl. Phys. .

Experimental data on total cross-sections, transverse momentum spectra and azimuthal correlations are presented and compared with the Lund quark model. Modifications in the model required for the description of the experimental data are discussed. 21 refs.; 3 figs.; 3 tabs.

46508 (IFVE-OEIPK—86-159) Study on the correlations between rapidities of two charged π-mesons in p-barp interactions at 32 GeV/c. Bumazhnov, V.A.; Babintsev, V.V.; Bogolyubskij, M.Yu. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov. Inst. Fiziki Vysokikh Ehnergij). 1986. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703102.

Submitted to the journal Sov. J. Nucl. Phys. .

Rapidity distributions of inclusive C/sup ij/(y/sub 1/, y/sub 2/) and semi-inclusive C/sup iJ//sub n/(y/sub 1/, y/sub 2/) correlation functions in p-bar p-interaction at 32 GeV/c are analysed. The data are compared with those from the K/sup -/p experiment at the same energy and predictions of the Lund quark fragmentation model. The correlation functions are shown to be weakly dependent on resonance production, diffractive dissociation and annihilation processes. 21 refs.; 5 figs.

46509 (INIS-mf—10654) Neutron-proton scattering experiments and phase analyses for the n-p system in the energy range from 17 to 50 MeV. Krupp, H. (Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Physik). 27 Jun 1986. 133p. (In German). NTIS (US Sales Only), PC A07/MF A01. File Number DE87752467.

In the framework of the study of the nucleon-nucleon interaction neutron-proton scattering experiments were performed at the neutron collimator POLKA of the Karlsruhe cyclotron. Neutrons were produced by the source reaction D(d,n)X in the energy range between 17 and 50 MeV. Measured were the differential cross section, the analyzing power, and the spin correlation coefficient of the elastic n-p scattering. By means of the new data the knowledge of the isospin T=0 scattering phases could be improved. It is for the first time possible to determine the scattering phases for T=1 independently from n-p and p-p data with comparable accuracy. (orig./HSI).

46510 (KFK—4251) Clustertopology of multihadronic events in the e/sup +/e/sup -/-annihilation. Boehrer, A. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Apr 1987. 100p. (In German). NTIS, PC E09; Available from NTIS as TIB/B87-10826.

We measured multihadronic events with the detector CELLO at the e/sup +/e/sup -/ storage ring PETRA. At an energy $\sqrt{s}$=44 GeV we determined the strong coupling constant α/sub s/ with a generalized energy flow S/sup pw/, a jet measure sensitive to the particle distribution of an event. The result is consistent with former measrements at 34 GeV. We selected 3-jet events at 44 GeV. Events having a lowest energy jet with an energy of about 7 GeV were compared to 2-jet events at 14 GeV. The mean transversal momentum of the third jet turns out to be somewhat higher than that of the reference jets at 14 GeV.

46511 (LBL—91-Rev.-3-87) Current experiments in elementary particle physics. Wohl, C.G.; Armstrong, F.E., Oyanagi, Y.; Dodder, D.C.; Ryabov, Yu.G.; Frosch, R.; Olin, A.; Lehar, F.; Moskalev, A.N.; Barkov, B.P. (Lawrence Berkeley Lab., CA (USA)). Mar 1987. Contract AC03-76SF00098. 166p. NTIS, PC A08. File Number DE87013961.

This report contains summaries of 720 recent and current experiments in elementary particle physics (experiments that finished taking data before 1980 are excluded). Included are experiments at Brookhaven, CERN, CESR, DESY, Fermilab, Moscow Institute of Theoretical and Experimental Physics, Tokyo Institute of Nuclear Studies, KEK, LAMPF, Leningrad Nuclear Physics Institute, Saclay, Serpukhov, SIN, SLAC, and TRIUMF, and also experiments on proton decay. Instructions are given for searching online the computer database (maintained under the SLAC/SPIRES system) that contains the summaries. Properties of the fixed-target beams at most of the laboratories are summarized.

46512 (SLAC-PUB—4336) Search for close-mass lepton pairs (L^-,L^0). Stoker, D.P., Perl, M.L. (Stanford Linear Accelerator Center, Menlo Park, CA (USA); Johns Hopkins Univ., Baltimore, MD (USA)). May 1987. Contract AC03-76SF00515. 4p. (CONF-870390—10). NTIS, PC A02. File Number DE87013585.

From 22. Recontres de Moriond: electroweak interactions and unified theories conference; Les Arcs, France (8 Mar 1987).

Preliminary results are reported of a search in 207 pb^{-1} of MARK II PEP data at $\sqrt{s}$ = 29 GeV for lepton pairs (L^-,L^0) where the L^0 mass can be close to, but not exceed, the L^- mass. The numbers of e - μ, and 3 or more charged hadrons versus isolated e or μ, events are compared to Monte Carlo predictions for $e^+e^- \rightarrow tau^+tau^-$, $e^+e^- \rightarrow q$ anti q, and two-virtual-photon processes. Possible residual signals for (L^-,L^0) pairs are compared to Monte Carlo simulations and 2σ confidence level limits on the L^- and L^0 masses are presented.

46513 (SLAC-PUB—4350) Detecting beauty baryons and heavy beauty mesons with the J/PSI trigger. Bigi, I.I.; Clavelli, L. (Stanford Linear Accelerator Center, Menlo Park, CA (USA); Alabama Univ., University (USA). Dept. of Physics and Astronomy). Jun 1987. Contract AC03-76SF00515;FG05-84ER40141. 3p. (CONF-8705163—3; UA-HEP—873). NTIS, PC A02. File Number DE87013587.

From From colliders to supercolliders workshop; Madison, WI, USA (11 May 1987).

The combination of a vertex detector with a J/PSI trigger should enable one to measure the masses and lifetimes of various beauty baryons and heavy beauty mesons at the SSC or Tevatron II.

46514 (SLAC-PUB—4360) Experimental review of light quark spectroscopy from e^+e^- production and $\gamma\gamma$ collisions. Toki, W.H. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jul 1987. Contract AC03-76SF00515. 6p. (CONF-8704177—5). NTIS, PC A02. File Number DE87014312.

From 2. international conference on hadron spectroscopy; Tsukuba, Japan (16 Apr 1987).

This is an experimental review of light quark spectroscopy from e^+e^- production and $\gamma\gamma$ collision results presented at the 2nd International Conference on Hadron Spectroscopy at KEK, Japan. The recent results in $\gamma\gamma$ production have evidence for the J/sup PC/ = 1^{++}, E/f_1(1420) and D/f_1(1285), mesons from the TPC and Mark II collaborations and upper limits for pseudoscalar resonances from the Crystal Ball collaboration. The results in J/psi reactions include D/f_1(1285) meson production in radiative decays and a complete measurement of the hadronic decays into pseudoscalar-vector pairs from the DM2 collaboration and evidence for phi phi production in radiative decays and a study of the iota line shape from the Mark III collaboration. A short review of simple theoretical ideas is presented.

46515 Present activity and future plans at Fermilab. Lederman, L. (Fermi National Accelerator Lab., Batavia, IL 60510). pp 1499-1503 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The author summarizes the critical path for getting the machinery on this fall completion of the interaction hall at D-zero and the erection of shielding walls so that the assembly hall can continue to be constructed. This is on schedule. The overpass takes the main ring and loops up 20 feet and around the CEF detector. The main ring, accelerates from 8 GeV to 150 GeV. The basic scheme of the p-bar source is that the main ring accelerates to 120 GeV, then the beam is extracted and delivered to the p-bar target. Antiprotons are produced, focused, and injected into the two concentric storage rings where they are cooled and accumulated for some hours. They are then injected back into the main ring now orbiting in a sense opposite to protons. They are accelerated to 150 GeV and transferred to the Tevatron and accelerated along with protons to high energy. The energy has to go to 900 GeV. Lots of work is to be done on the booster, and the fixed target beam lines and experiments are being completed and made ready for beam. CDF is complete, in the sense that any detector is ever complete, by November of 1987. It is expected on December 1st to begin high energy physics, starting with pp-bar collisions, hopefully at 1.8 GeV, for approximately three months.

46516 The ACP multiprocessor system at Fermilab. Nash, T.; Areti, H.; Atac, R.; Biel, J.; Case, G.; Cook, A.; Fischler, M.; Gaines, I.; Hance, R.; Husby, D. (Advanced Computer Program, Fermi National Accelerator Lab., P.O. Box 500, Batavia, IL 60510). pp 1459-1463 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Two versions of the ACP have been developed: one uses Motorola's 68020 32 bit microprocessor, the other runs with AT & T's 32100. Both include the corresponding floating point coprocessor chip. The first system when fully configured, uses 70 each of the two types of processors. A 53 processor system operates for several months with essentially no down time by computer operators in the Fermilab Computer Center, performing at nearly the capacity of 6 CDC Cyber 175 mainframe computers. The VME crates in which the processing "nodes sit are connected via a high speed "Branch Bus" to one or more MicroVAX computers which act as hosts handling system resource management and all I/O in offline applications. An interface from Fastbus to the Branch Bus developed for online use which tests error free at 20 MBytes/sec for 48 hours ACP hardware modules are available commercially. A major package of software, including a simulator that runs on any VAX, has been developed. It allows easy migration of existing programs to this multiprocessor environment. This paper describes the ACP Multiprocessor System and early experience with it at Fermilab and elsewhere.

46517 Search for long range interactions at highly relativistic velocities. Reiner, P.; Melissinos, A.C.; Rogers, J.; Wuensch, W.; Semertzidis, J.; Fowler, W.B. (Dept. of Physics and Astronomy, Univ. of Rochester, Rochester, NY 14627). pp 1487-1489 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The authors use the Fermilab Tevatron to search for unknown weak long range forces between the accelerator's proton beam at 800 GeV and a stationary detector. Assuming an inverse distance squared force law with dimensionless coupling between the detector and beam masses; the upper limit of the Newtonian gravitational constant is found.

46518 Photon-photon physics with the Mark II at PEP. Cords, D.; Gidal, G.; Boyer, J.; Butler, F.; Abrams, G.S.; Amidei, D.; Baden, A.R.; Barklow, T.; Gold, M.S.; Goldhaber, G. (Lawrence Berkeley Lab. and Dept. of Physics, Univ. of California, Berkeley, CA 94720). pp 1215-1219 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00098;AC03-76SF00515.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Photon-photon interactions are studied with the Mark II detector at PEP. The inclusive production of charged hadrons at large transverse momenta are compared with recent hard scattering calculations. Copious inclusive production of K°'s at large transverse momenta provides evidence for charm production. The radiative width of the f'(1520) is measured via its K°/sub s/K-bar°/sub s/ decay mode.

46519 **Searches for monopoles and quarks.** Matis, H.S. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA 94720 U.S.A.). pp 627-631 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00098.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Within the last year, several sensitive searches for monopoles and quarks have been done. Recent experiments at the Tevatron and at the CERN pp-bar collider have detected no evidence for free fractional charge. An experiment in a iron refinery, which searched for GUT monopoles trapped in iron ore with two SQUID detectors, found no monopole candidate. However, an experiment looking for monopoles in cosmic rays has measured an interesting event which could be interpreted as a monopole. Several detectors are being built to achieve significant improvements in sensitivity for detection of quarks and monopoles.

46520 **Non-accelerator experiments.** Goldhaber, M. (Brookhaven National Lab., Upton, NY 11973). pp 248-251 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The author discusses about "Non-accelerator Experiments" coherent field of physics. The aims pursued in these experiments overlap often with aims pursued in accelerator experiments. Much physics done in the eighties, especially in the non-accelerator field, can be characterized as the "physics of pushing limits". Some of these limits (masses, mixing angles, abundances, etc.) may be too small to be detected with present day techniques. They may even be zero, a number that experiment can approach, but not reach; it can only be a theoretical prediction. Experimenters, therefore, must beware of "false positives". As rapporteur for non-accelerator experiments, the author could not avoid taking of experiments in progress or planned.

46521 **Branching ratio of $\Xi 0 \rightarrow \Lambda\gamma$, a weak radiative hyperon decay.** James, C.; Heller, K.; Handler, R.; Lundberg, B.; Pondrom, L.; Sheaff, M.; Wilkinson, C.; Border, P.; Dworkin, J.; Overseth, O.E. (School of Physics and Astronomy, Univ. of Minnesota, Minneapolis, MN 55455). pp 877-879 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The branching ratio $\Xi^0 \rightarrow \Lambda\gamma$ / $\Xi^0 \rightarrow \Lambda\pi^0$ has been measured at the Fermilab neutral hyperon facility. 100,000 $\Xi^0 \rightarrow \Lambda\pi^0$ decays were detected by identifying the subsequent $\Lambda \rightarrow$ rhoπ/sup -/ and $\pi^0 \rightarrow \gamma\gamma$ decays in a multiwire proportional chamber magnetic spectrometer and an array of lead glass. A sample of 6.7 x 10/sup 5/ $\Lambda + \gamma$ events were analyzed and a preliminary result indicates that 170 $\Xi^0 \rightarrow \Lambda\gamma$ decays have been identified. Monte carlo studies give the relative acceptances of the two decay types, and in turn the branching ratio.

46522 **Search for rare muon and pion decay modes with the crystal box detector.** Hoffman, C.M.; Bolton, R.D.; Bowman, J.D.; Cooper, M.D.; Frank, J.S.; Hallin, A.L.; Heusi, P.; Hogan, G.E.; Mariam, F.G.; Matis, H.S. (Los Alamos National Lab., Los Alamos, NM 87545). pp 866-869 of Proceedings of the XXIII international conference on high energy physics. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

New experiment upper limits for the branching ratios of the lepton-family-number nonconserving decays μ/sup +/ $\rightarrow$ e/sup +/γ and μ/sup +/ $\rightarrow$ e/sup +/$\gamma\gamma$ are presented. A new determination of γ, the ratio of pion axial-vector to vector form factors, from radiative pion decay is also reported. These results are from data taken with the Crystl Box detector at LAMPF.

46523 **Single photon production in e/sup +/e/sup -/ annihilation.** Whitaker, S. (Physics Dept., Boston Univ., Boston, MA 02215). pp 602-607 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Results are presented from the ASP, MAC, CELLO, and Mark J detectors for the production of single photons in electron positron annihilation. Upper limits on the production of single photons are expressed as upper limits on the number of light neutrino species and lower limits on the masses of supersymmetric particles. The ASP experiment has determined a limit on the selectron mass of 65.7 GeV for the case of degenerate selectron masses and massless photinos, and has determined a limit of 7.5 for the number of light neutrino species. The combined 90% confidence limit from the ASP, MAC, and CELLO experiments for the number of light neutrino species is 4.9.

46524 **A measurement of the spin-parity of the $\omega\pi$/sup 0/ state at 1200 MeV/c/sup 2/ in $\gamma p \rightarrow p\omega\pi$/sup 0/ at 20 GeV.** Brau, J.E.; Franek, B.; Wester, W.C. III. (Univ. of Tennessee, Knoxville, TN 37996-1200). pp 733-735 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The SLAC Hybrid Facility photoproduction experiment has studied the low mass $\omega\pi$/sup 0/ enhancement in the reaction γrho $\rightarrow$ rho$\omega\pi$/sup 0/. The angular distribution of the production plane relative to the polarization vector (P/sub γ/ = 0.52) shows structure consistent with an s-channel helicity non-conserving process. The authors compare our decay angular distributions to the measurements of the Omega Photon Collaboration from which they concluded that this reaction is dominated by non-SCHC production of the J/sup P/ = 1/sup +/ B(1235) meson. Their parametrizations of the angular distributions agree well with the author's data.

46525 **Resonant neutrino oscillations within the solar interior.** Parke, S.J. (Fermi National Accelerator Lab., P.O. Box 500, Batavia, IL 60510). pp 921-924 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Analytic results are derived for the electron neutrino survival probability after passage through a resonant oscillation region. This survival probability together with a sophisticated model of the production distribution of the solar neutrino sources and the solar electron number density are used to study the effects of resonant neutrino oscillation in the solar interior on the current and proposed solar electron neutrino experiments. The results are presented as contour plots for the electron neutrino capture rate, in the mass difference squared versus vacuum mixing angle plane, for the current /sup 37/Cl experiment and the proposed /sup 71/Ga detector.

46526 **Matter oscillations and solar neutrinos: A review of the MSW effect.** Rosen, S.P.; Gelb, J.M. (Theoretical Div., Los Alamos National Lab., Los Alamos, NM 87545). pp 909-920 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The authors review the theory of the Mikheyev-Smirnov-Wolfenstein effect, in which matter oscillations can greatly enhance "in vacuo" neutrino oscillations, and they examine its consequences for the solar neutrino problem. Using a two-flavor model, they dis-

cuss the solutions in the Δm/sup 2/-sin/sup 2/2Θ parameter space for the /sup 37/Ciota experiment, and describe their predictions for the /sup 71/Ga experiment and for the spectrum of electron-neutrinos arriving at earth. The authors also comment on the three-flavor case.

46527 **The U.C. Irvine mobile neutrino-oscillation experiment.** Baumann, N.; Greenwood, Z.D.; Gurr, H.S.; Kropp, W.R.; Mandelkern, M.; Price, L.R.; Reines, F.; Sobel, H.W. (The Savannah River Plant, Aiken, SC). pp 906-908 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Preliminary results are reported from the Irvine Neutrino Oscillation Experiment. This is an electron-antineutrino disappearance experiment at a reactor, and is sensitive to mass squared differences in the range — .02 to — 3. eV/sup 2/.

46528 **Limit on tau neutrino mass.** Bylsma, B. (Argonne National Lab.). pp 897-899 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Using the complete data sample of 300 pb/sup -1/ collected by the HRS spectrometer in e/sup +/e/sup -/ collisions at 29 GeV, a mass limit for the tau neutrino is set. The end point of the hadronic mass spectrum is determined in the decays tau → 5π/sup +-/ν/sub tau/ and 5π/sup +-/π/sup 0/ν/sub tau/. At 95% confidence level, an upper limit of Mν/sub tau/ < 76 MeV/c/sup 2/, is found.

46529 **Sigma minus form factors and magnetic moment.** Winston, R. (Enrico Fermi Institute and Dept. of Physics, The Univ. of Chicago, 5640 South Ellis Avenue, Chicago, IL 60637). pp 883-886 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The author reports results from a Fermilab polarized Sigma minus decay experiment. From a sample of 50,000 beta decays and 10/sup 6/ two body decays with polarization parallel to the magnetic field he has extracted the semi-leptonic form factors. From another sample of 21,000 beta decays and 650,000 two body decays where the polarization processed in the magnetic field he has measured the magnetic moment.

46530 **Study of π/sup +/π/sup -/ transitions from the Υ(3S).** Bowcock, T.; Giles, R.T.; Hassard, J.; Kinoshita, K.; Pipkin, F.M.; Wilson, R.; Wolinski, J.; Xiao, D.; Gentile, T.; Haas, P. (Harvard Univ., Cambridge, MA 02138). pp 641-645 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The authors have investigated the transitions Υ(3S)→π/sup +/π/sup -/Υ(1S), Υ(3S)→π/sup +/ π/sup -/Υ(2S), and the cascade process Υ(3S)→Υ(2S)+X; Υ(2S)→π/sup +/π/sup -/Υ(1S), both in the exclusive decay mode where the daughter Υ state decays into two leptons, and in the inclusive decay mode where the daughter Υ state decays hadronically. Results are presented on branching fractions and the properties of the π/sup +/π/sup -/ system. Possible evidence for the transition Υ(3S)→π/sup +/π/sup -/Υ(1/sup 1/P/sub 1/) is presented.

46531 **The D width and the study of F and F.** Sugano, K. (Argonne National Lab., Argonne, IL 60439). pp 646-651 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Recent results on the D, F, and F production in e/sup +/e/sup -/ from HRS and MARK III are summarized. An improved upper limit on the decay width of D is reported. A brief review of the characteristics of F and the updated data of the F production in e/sup +/e/sup -/ are given. A new measurement on F is made using the associated production method in the reaction e/sup +/e/sup -/ → FF.

46532 **Short-lived axion searches with long beam dumps.** Luk, K.B. (Fermilab, Batavia, IL 60510). pp 632-634 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Searches for axions with lifetime less than 10/sup -11/ sec and decaying into e/sup +/e/sup -/ pairs were performed in an 800 GeV proton, and a 2.5 GeV electron beam dump experiments. No axion is found and the existence of a short-lived penetrating neutral particle with mass less than 2.4 MeV and only coupled to electron is ruled out.

46533 **An electron beam dump search for light, short-lived particles.** Riordan, E.M.; De Barbaro, P.; Bodek, A.; Dasu, S.; Krasny, M.W.; Lang, K.; Varelas, N.; Wang, X.R.; Arnold, R.; Benton, D. (Univ. of Rochester, Rochester, NY 14627). pp 635-637 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The authors report preliminary results of an electron beam dump search for neutral, penetrating particles X/sup 0/ with masses in the range 1 < m/sub X/ < 12 MeV and lifetimes tauX between 10/sup -14/ and 10/sup -11/ sec. No evidence was found for such an object in runs with a total of 10/sup 15/ e/sup -/ on dump. They specifically rule out the existence of any possible 1.8 MeV pseudoscalar with tauX > 2 X 10/sup -14/ sec and an absorption cross-section in matter less than 150A/sup 0.7/ mb pr nucleus. Inasmuch as measurements of the electron's anomalous magnetic moment constrain tauX > 7 X 10/sup -14/ sec for a neutral 1.8 MeV pseudoscalar boson, this experiment excludes the recent GSI phenomenon as an elementary pseudoscalar.

46534 **Heavy leptons in 1986.** Perl, M.L. (Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 596-601 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00515.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The author updates recent reviews on the search for new leptons beyond the electron, muon, and tau generations. The author also discusses an unexplored region in the mass ranges of leptons; small visible energy events in electron-positron annihilation and close-mass pairs.

46535 **Recent CLEO results on B meson decays (mostly) to leptons and dileptons.** Poling, R. (Univ. of Rochester, Rochester, NY 14627). pp 768-772 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Recent results on B production and decay from the CLEO experiment are reviewed. The validity of the assumption that Y (4S) decays exclusively to BB-bar is examined, and new limits are presented for Γ (b→μ)/Γ (b→c), for B/sup 0/B/sup 0/ mixing, and for the ratio of the charged and neutral B meson semileptonic branching fractions.

46536 **New PEP tau and B-lifetime results.** Ritson, D.M. (Dept. of Physics and Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 809-812 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00515.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

New results on tau and B-lifetimes obtained at the PEP colliding beam ring are presented.

46537 **Recent mark III results on radiative and hadronic j/psi decays.** Kopke, L. (Santa Cruz Institute for Particle Physics Univ. of California Santa Cruz, CA 95064). pp 692-699 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Recent results from the Mark III Collaboration on radiative and hadronic J/psi decays are presented, based on a sample of 5.8 X 10/sup 6/ produced J/psi events. A spin analysis of the ξ(2230) indicates non-zero spin. The radiative channels J/psi → γphiphi and J/psi → γωphi are discussed. A comparison of J/psi → {γ,ω,phi}X decays is made. The examinations of the final states X = {K K-bar, ππ, K K-barπ, etaππ, 4π} reveals possible evidence for the θ(1720) and no indication for the iota(1450) in the hadronic decays. A partial study of the O/sup ++/ meson multiplet in J/psi two-body decays shows that the δ(980) is probably not a qq-bar state.

46538 **A search for the ξ(2.2) in p-barp formation.** Sculli, J.; Christenson, J.H.; Kreiter, G.A.; Nemethy, P.; Yamin, P. (Dept. of Physics, New York Univ., 4 Washington Place, NY, NY 10003). pp 706-708 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The authors report the results of a search at the Brookhaven National Laboratory AGS for the ξ(2.2) with a mass resolution of 3MeV/c/sup 2/. Thirty-seven thousand events of the form p-barp → K/sup +/K/sup -/ and two hundred thousand events of the form p-barp → π/sup +/π/sup -/ were studied in the incident momentum interval from 1.25 GeV/c to 1.56 GeV/c, corresponding to a mass interval of 110 MeV/c/sup 2/ about the reported ξ mass. They find no evidence for ξ formation.

46539 **A study of strange and strangeonium states produced in LASS.** Aston, D.; Awaji, N.; Bienz, T.; Bird, F.; D'Amore, J.; Dunwoodie, W.; Endorf, R.; Fujii, K.; Hayashii, H.; Iwata, S. (Stanford Linear Accelerator Center, Stanford Univ., P.O. Box 4349, Stanford, CA 94305). pp 718-724 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00515.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Results are presented from the analysis of several final states from a high-sensitivity (4 ev/nb) study of inelastic K/sup -/rho interactions at 11 GeV/c carried out in the LASS Spectrometer at SLAC. New information is reported on leading and underlying K/sup */ states, and the strangeonium states produced by hypercharge exchange are compared and contrasted with those observed in radiative decays of J/psi.

46540 **New results on tau polarization measurement and electroweak interference in e/sup +/e/sup -/ annihilation into hadrons.** Maruyama, T. (Dept. of Physics, Univ. of Wisconsin, Madison, WI 53706). pp 975-978 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

New results are presented on test of the electroweak theory. Topics discussed are; Tau polarization measurement by MAC, and Forward-backward asymmetry measurements in hadron production by CELLO, HRS, and MAC.

46541 **The results of two scattering processes: ππ → phiphi and ππ → KK-bar.** Longacre, R.S.; Chan, C.S.; Etkin, A.; Foley, K.J.; Hackenburg, R.W.; Kramer, M.A.; Lindenbaum, S.J.; Love, W.A.; Morris, T.W.; Platner, E.D. (Brookhaven National Lab., Upton, NY 11973). pp 729-732 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC02-76CH00016;AC02-83ER40107.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The authors present an analysis of 6658 events of the reaction π/sup -/rho → phiphin at 22 GeV/c. This data is well represented by three resonances, all with quantum numbers I/sup G/J/sup PC/ = 0/sup +/2/sup ++/. In a second analysis, which consists of 40494 new events of the reaction π/sup -/rho → K°/sub s/K°/sub s/n at 22 GeV/c, the authors obtain the S/sub 0/, D/sub 0/ and G/sub 0/ Argand amplitudes for ππ → KK-bar. The θ (1690) is shown to decay into ππ by less than 4% and only is required in J/psi radiative decay experiments.

46542 **Some aspects of quark fragmentation: Comparison of heavy (c) and light quarks (u,d,s).** Derrick, M. (Argonne National Lab., Argonne, IL 60439). pp 748-763 of Proceedings of the XV international symposium on multiparticle dynamics. Gustafson, G.; Peterson, C. Teaneck, NJ; World Scientific Pub. Co. (1984). (CONF-8406183—).

From 15. international symposium on multiparticle dynamics; Lund, Sweden (11 Jun 1984).

The data that is presented comes from the first two years of operation of the High Resolution Spectrometer (HRS) at PEP, and corresponds to an integrated luminosity of 106 +- 5 pb/sup -1/ (20 pb/sup -1/ from the first year and 86 pb/sup -1/ from the second year's running). Since the quark-meson transitions have a particularly simple form at the values of the momentum fraction Z = /sup 2p/meson/√s, this aspect of the data is emphasized, and shows how a sample of e/sup +/e/sup -/ → (uu-bar, dd-bar, ss-bar) events are selected. The characteristics of these events are compared to e/sup +/e/sup -/ → cc-bar selected by a D* tag.

46543 **Glueball candidates in hadroproduction.** Chung, S.U. (Brookhaven National Lab., Upton, NY 11973). pp 186-200 of Proceedings of the XV international symposium on multiparticle dynamics. Gustafson, G.; Peterson, C. Teaneck, NJ; World Scientific Pub. Co. (1984). (CONF-8406183—). Contract AC02-76CH00016.

From 15. international symposium on multiparticle dynamics; Lund, Sweden (11 Jun 1984).

Glueball candidates in hadron-hadron collision processes are reviewed. So far, candidates have been reported in J/sup PC/ = 0/sup ++/, 2/sup ++/ and 0/sup -+/ but none in the exotic J/sup PC/ such as 1/sup -+/.

46544 (BNL—40075) An event generator for ultrarelativistic proton proton collisions: A multistring model. Werner, K. (Brookhaven National Lab., Upton, NY (USA)). 1987. Contract AC02-76CH00016. 9p. (CONF-870543—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013312.

From 2. workshop on experiments and detectors for relativistic heavy ion collider; Berkeley, CA, USA (25 May 1987).

A multistring model for low p/sub t/ proton proton collisions is presented. The process is divided into two independent steps: formation of color strings and subsequent fragmentation of strings. Taken into account is diffractive and nondiffractive contributions, each contribution consisting with a certain probability w/ sub i/ of 2i strings. The i > 1 contributions correspond to "multi-Pomeron exchange."

46545 (BNL—40203) Rare W decays at the SSC [superconducting super collider]?. Paige, F.E. (Brookhaven National Lab., Upton, NY (USA)). Aug 1987. Contract AC02-76CH00016. 9p. (CONF-870739—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014427.

From Workshop on experiments, detectors, and experimental areas for the supercollider; Berkeley, CA, USA (7 Jul 1987).

The feasibility of studying rare W decays at the SSC is considered. It seems unlikely that hadronic decays can be observed with greater sensitivity than that obtainable at LEP 200. Interesting purely leptonic decays occur in some models and might be observable. The sensitivity will be limited by backgrounds, so excellent lepton identification, jet recognition, and missing pT resolution are needed.

46546 (BNL—52079, pp 1-12) **Neutrino physics - a theoretical perspective.** Marciano, W.J. 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

Experimental measurements of sin² theta/sub W/ are surveyed. They are shown to test electroweak unification at the quantum loop level and constrain new physics beyond the standard model. Neutrino oscillations are also examined in the framework of 3 generation mixing. Searches for nu/sub μ/ → nu/sub tau/ oscillation at accelerator facilities are advocated.

46547 (BNL—52079, pp 89-110) **Effects of the third generation on neutrino oscillations in vacuum and matter.** Kim, C.W. (Johns Hopkins Univ., Baltimore, MD). 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

Analysis of neutrino oscillation data is presented with emphasis on the role of the third generation neutrino. Differences between the two and three generation cases are highlighted. The implications of recent results on the solar neutrino problem are also discussed.

46548 (BNL—52079, pp 111-119) **Resonant solar neutrino oscillation versus laboratory neutrino oscillation experiments.** Lim, C. 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

The interplay between resonant solar neutrino oscillations and neutrino oscillations in laboratory experiments is investigated in a 3 generation model. Due to the assumed hierarchy of neutrino masses, together with their choice of a convenient parameterization of the 3 generation mixing matrix, they can derive a simple analytic formula which reduces the solar neutrino problem to an effective 2 generation problem. The reduction makes it apparent that the allowed range of mixing and mass parameters crucially depend on whether the survival probability of solar neutrinos S satisfies S ≧ 1/3 or not. The formulae for probabilities of laboratory neutrino oscillations are also greatly simplified. They argue that a combination of the observed solar neutrino depletion and data obtained from reactor experiments seems to rule out some range of neutrino masses. If a sizable nu/sub μ/ → nu/sub e/ oscillation is observed at accelerators, as suggested at this Workshop, it severely restricts the range of 2 mixing angles.

46549 (BNL—52079, pp 121-135) **Matter oscillations: neutrino transformation and regeneration in the earth.** Baltz, A.J.; Weneser, J. 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

Transformation and regeneration phenomena are calculated to result from transmission through the Earth of neutrinos with E(MeV)/Δm² (eV)² in the vicinity of 10^6 to 10^7. As a result, large time-of-night and seasonal variations are predicted for various solar neutrino experiments in this parameter range. Analogous effects are predicted for terrestrial cosmic ray and accelerator experiments.

46550 (BNL—52079, pp 195-203) **Effect of extra neutral gauge bosons on neutrino-electron scattering.** Godfrey, S.; Marciano, W.J. 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

The effects of additional neutral gauge bosons on neutrino-electron scattering cross sections are examined. Existing data is shown to provide bounds in the 100-250 GeV range for a class of E_6 inspired models. Estimates of the precision reachable in ongoing measurements indicates that those bounds should approach 400 GeV and a proposed new experiment at Los Alamos may probe mass scales of order 800 GeV.

46551 (BNL—52079, pp 205-220) **Weak neutral current.** Langacker, P. (Univ. of Pennsylvania, Philadelphia). 1987. NTIS, PC A11/MF A01. File Number DE87012506. (CONF-870283—).

From BNL neutrino workshop; Upton, NY, USA (5 Feb 1987).

The results of a detailed analysis of existing data on the weak neutral current and the W and Z masses are presented. The weak angle is found to be sin² theta/sub W/ identical with 1 - M/sub W/²/M/sub Z/² = 0.230 +/- 0.0048, where the error includes full statistical, systematic, and theoretical uncertainties. Allowing rho identical with M/sub W/²/(M/sub Z/² cos² theta W) to vary one obtains rho = 0.998 +/- 0.0086. Implications for tests of the standard model at the level of radiative corrections, non-standard Higgs representations, m/sub t/ and heavy fourth family fermions, grand unification, and possible additional Z bosons are discussed.

46552 (BONN-HE—87-07) On the gauge (in)dependence of the dynamical quark mass. Reinders, L.J.; Stam, K. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Apr 1987. 9p. NTIS, PC E07; Available from NTIS as TIB/B87-10864.

We compute the contribution of the mixed quark-gluon condensate to the quark self-energy to all orders in the dynamical quark mass. We investigate the consistency of different expansion schemes. It is found that nonabelian interactions form an obstruction to defining a true dynamical gauge independent mass shell.

46553 (CERN—87-02) 1986 CERN School of Physics. Proceedings. (European Organization for Nuclear Research, Geneva (Switzerland)). 30 Mar 1987. 310p. (CONF-8606329—). NTIS (US Sales Only), PC A14/MF A01. File Number DE87703049.

From CERN school of physics; Sandhamn, Sweden (8 Jun 1986).

The CERN School of Physics is intended to give young experimental physicists an introduction to the theoretical aspects of recent advances in elementary particle physics. These proceedings contain reports of lecture series on the following topics: introduction to symmetries and gauge theories, quark dynamics, experimen-

tal tests of gauge theories, proton antiproton collider results and detectors, physics at LEP, superphysics, and quantum black holes.

46554 **(DOE/ER/40200—107) Leptoquark signals at e^+e^- colliders.** Hewett, J.L.; Rizzo, T.G. (Texas Univ., Austin (USA). Center for Particle Theory). Jun 1987. Contract FG05-85ER40200. 22p. (IS-J—2474). NTIS, PC A02/MF A01. File Number DE87014582.

We examine the production of scalar leptoquark (S) pairs in e^+e^- annihilation along with indirect limits of leptoquark properties from existing e^+e^- data and that which can be obtained in the near future from the SLC and LEP.

46555 **(IC—86/247) New potential model for heavy quarkonium.** Song Xiaotong; Lin Hefen. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703053.

A new potential model for heavy QQ-bar system is suggested. The potential is a simple superposition of square root potential and inverse square root potential. They are inspired by QCD and experimental facts. Using this potential, the level and decay rates for heavy quarkonium are calculated. Most results agree with the experiment. 22 refs.

46556 **(IC—86/268) Test of the transverse magneticity of the $\xi(2.23)$.** Ward, B.F.L. (International Centre for Theoretical Physics, Trieste (Italy)). Aug 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703054.

We propose the Jacob-Wick helicity amplitude ratios x-bar=A/sub 1//A/sub 0/ and y-bar=A/sub 2//A/sub 0/ for PSI/J -> $\gamma\xi$, ξ -> K/sup +/K/sup -/, as tests of the transverse magneticity of the two gluon constituents of the $\xi(2.23)$ under the assumption that the latter state is in fact a spin 2 bound state of two constituents gluons. Here A/sub j/ is the respective amplitude for ξ helicity j, j=0,1,2. We therefore encourage experimentalists to measure these ratios. 12 refs, 3 figs.

46557 **(IC—86/277) O(5) x U(1) electro weak gauge theory and the exact relation between the Cabibbo and the Weinberg angles.** Samiullah, M. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703056.

In the present study we have employed the group O(5)xU(1). The group is economical in the number of gauge bosons, which we associate with each of its generators, and anomaly free. The left-handed quarks Q/sub L//sup T/=(u,d,s,c)/sub L/ are assigned to the four dimensional spinorial representations of O(5). The right-handed particles u/sub R/, d/sub R/, s/sub R/, c/sub R/ are taken to be the singlets of the group. We have briefly sketched the relevant mathematics used in our work. The table of relevant quantum numbers is given. The charge operator is defined. Conventionally the mixing of the quark fields is achieved by an appropriate choice of the Higgs couplings which appear in quark mass matrix. However, in the present approach the Cabibbo angle is introduced through the mixing of the additional charged gauge bosons as compared to the GWS model. The theory has three sets of gauge bosons (i) analogues of the GWS model (ii) additional charged gauge bosons already mentioned and (iii) a set of three neutral gauge bosons. We find the appropriate mixing by an angle 2θ/sub c/ warranted by the group theory and that the additional neutral currents of the theory remain form invariant. Also it produces the exact combinations of the GWS analogue gauge bosons to yield A/sub μ/ and Z/sub μ//sup O/, establishing the exact relation θ/sub w/=2θ/sub c/. The electromagnetic coupling constant is given as usual by 'e'. This result is established here theoretically for the first time to the knowledge of the author and is borne out by the experimental data. However, in view of the exact relation it leaves room for the reconsideration of the data by the experimentalists. 7 refs.

46558 **(IC—86/284) Salam-Weinberg symmetry breaking with superheavy Higgs particles.** Misra, S.P. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703057.

We discuss here the possibility of the breaking of the Salam-Weinberg symmetry by Higgs particles which are superheavy. The symmetry-breaking is associated with a nonzero vacuum expectation value of fermion condensates. This mechanism, if operative in nature, will imply the absence of Higgs particles at the weak scale. 20 refs.

46559 **(IC—86/312) Signal for quark gluon plasma in fragmentation region.** Singh, C.P. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703064.

After analyzing the recent proposals for observing the signals of quark gluon plasma in the ultra relativistic nucleus-nucleus collisions we suggest that the signals should be better searched for in the fragmentation rapidity region because the complications due to hadronic background can safely be avoided. 21 refs.

46560 **(IC—86/386) Experimental tests of unification models.** Pal, B.K. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703092.

Several tests of unification models are described. SU(5), SO(10) and SU(16) are the models at the grand unification theory level and SU(4)/sub C/xSU(2)/sub L/xSU(2)/sub R/ is at the partial unification theory level. The construction of these groups are briefly discussed. The tests selected for discussion are the existence of intermediate mass-scales spanning the gap between 10/sup 2/-10/sup 15/GeV, observable V+A interactions mediated by W/sub R/'s finiteness of the neutrino mass in the electron volt region, alternative proton-decay modes viz. p -> e/sup +/π/sup 0/, $\nu\pi$/sup +/; p -> e/sup -/π/sup +/π/sup +/; p -> e/sup -/$\nu\nu\pi$/sup +/π/sup +/ etc., neutron oscillations (n -> n-bar) and neutrino oscillations. 14 refs.

46561 **(INIS-mf—10655) Calculation of the pion-nucleon double spectral functions and applications.** Grether, D. (Karlsruhe Univ. (T.H.) (Germany, F.R.). Fakultaet fuer Physik). 16 May 1986. 98p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE87752466.

In the present thesis the latest results from pion-pion and pion-nucleon phase analyses are applied in order to calculate the pion-nucleon double spectral functions which belong to the elastic unitarity in the t-channel. The equivalence of the partial wave projection of these spectral functions in the s-channel with the elastic t-channel unitarity is extensively discussed. After we summarize the aspects of the pion-nucleon system seeming in this connection interesting we discuss the Mandelstam method for the calculation of the spectral functions by means of the elastic t-channel unitarity as well as the applied input and present the results. Thereafter we use these results in order to calculate by means of a fixed t-channel dispersion relation the real parts of the t-channel cuts. Partial wave projections into the t-channel are proved as equivalent to the elastic t-channel unitarity. We study the compatibility of the asymptotic behaviour of the spectral functions relative to the energy with current Regge pole models. Finally we use our results in order to calculate the pion-nucleon partial waves by means of their Froissart-Gribov representations which follow from their analyticity at fixed energy. (orig./HSI).

46562 **(JINR—R-1-86-67) Calculation of the number of background e/sup +/e/sup -/ -pairs in the experiments on K/sub L/-K/sub S/ regeneration on deuterium.** Sil'vestrov, L.V.; Takhtamyshev, G.G. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1986. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703113.

The calculations and simulations of e/sup +/e/sup -/-pairs were made from the known background processes in connection with the analysis of the production of these pairs in the experiments performed on BIS installation on K/sub L/ - K/sub S/ regeneration on deuterium. As a result, it has been found that the contribution of background pairs does not exceed 15% from the number of the observed excess e/sup +/e/sup -/-pairs. 11 refs.; 5 tabs.

46563 (JINR—R-2-86-142) Energy spectrum of the ($\pi\pi$), (πk), (kk)dimesic atoms. Electromagnetic interaction. Karimkhodzhaev, A.; Faustov, R.N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1986. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703115.

The properties of dimesic atoms produced by ($\pi\pi$), (πk), (kk)-mesons are discussed. The experimental measurement of the lifetime and of Lamb shift of energy levels of these atoms gives a unique possibility of direct definition of low-energy parameters. In the framework of the Logunov - Tavkhelidze quasi-potential approach the energy levels of the ($\pi\pi$), (kπ), (kk) dimesic atoms are calculated in the one-photon approximation taking into account the hadronic vacuum polarization. The expression for Lamb shift of the dimesic atom is obtained. 17 refs.; 1 fig.

46564 (LBL—23633) Composite weak bosons at supercolliders. Suzuki, Mahiko. (Lawrence Berkeley Lab., CA (USA)). Jun 1987. Contract AC03-76SF00098. 6p. (CONF-8705163—5; UCB-PTH—87/26). NTIS, PC A02/MFA01; 1; GPO Dep. File Number DE87014119.

From From colliders to supercolliders workshop; Madison, WI, USA (11 May 1987).

Following a brief survey of nongauge interactions of composite W and Z from a theoretical viewpoint, we point out some of conspicuous signatures of compositeness at supercolliders, in particular Wγ and Zγ production through q anti q by interactions of dimension six. In these processes, a suppression factor $1/\Lambda^2$ due to compositeness scale Λ is largely compensated by longitudinal polarizations of W and Z, allowing us to probe up to high values of Λ. 10 refs., 3 figs.

46565 (SLAC-PUB—4369) Search for charged Higgs bosons at SSC [Superconducting Super Collider]. Bengtsson, H.U.; Yamamoto, H.; Komamiya, S. (California Univ., Los Angeles (USA); Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jul 1987. Contract AC03-76SF00515. 8p. (CONF-8705163—6). NTIS, PC A02. File Number DE87014315.

From From colliders to supercolliders workshop; Madison, WI, USA (11 May 1987).

We examine the possibility of finding charged Higgs bosons (H^{+-}) at the SSC. The charged Higgs boson is produced with a top quark via a gluon + bottom quark interaction ($g + b \rightarrow H + t$). For the two Higgs doublet models, H^{+-} decays predominantly into t + b. Since the background from QCD processes will be very severe for this decay mode, we studied the $H^{+-} \rightarrow$ tau + nu decay mode. Even for this mode, background from the processes $pp \rightarrow W + t +$ spectators $\rightarrow l +$ nu/sub l/ + t + spectators will be very high. In the two Higgs doublet models, it is very difficult to extract the charged Higgs signal for reasonable values of the ratio of the two vacuum expectation values ($\tan\beta = nu_1/nu_2$).

46566 (UWThPh—1987-07) Electromagnetic mass-differences of mesons. Flamm, D.; Schoeberl, F.; Uematsu, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1987. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703130.

We calculate the electromagnetic mass differences of light and heavy vector- and pseudoscalar mesons in the framework of a nonrelativistic potential model. The effect of the isospin violating mass differences appears not only from the quark mass difference m/sub d/ - m/sub u/ but also indirectly via isospin violation induced by this mass difference in the strong interaction which can be much larger than the electromagnetic effect.

46567 (UWThPh—1987-13) Study of wino pair production in e/sup +/e/sup -/ annihilation. Fukai, Tomoki; Kizukuri, Yoshiki; Oshimo, Noriyuki; Otake, Yoshie; Sugiyama, Naoshi. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1987. 36p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87703135.

We discuss wino pair production in e/sup +/e/sup -/ annihilation and subsequent leptonic wino decay for various types of supersymmetric or supergravity models. Phenomenological predictions on this process depend considerably on a specific model. We analyze the energy distribution, forward-backward asymmetry and angular distribution of a charged lepton in the final state. (Author shortened by G.Q.).

46568 Poisson-type multiplicity distribution and the Giovannini-Van Hove model. Hoang, T.F.; Cork, B. (Lawrence Berkeley Lab., CA, USA). *Zeitschrift fuer Physik [Sektion] C: Particles and Fields;* **36**: No. 2, 323-328(Sep 1987). Contract AC03-76SF00098.

Properties of a Poisson-type distribution satisfying the same recurrence relation as the negative binomial distribution are investigated using the charged multiplicity data of anti pp, pp, π/sup +/ p, K/sup +/p and e/sup +/e/sup -/ interactions. Its two parameters are found to deviate significantly from the predictions of the Giovannini-Van Hove model. Remarks are made on the property of quark content of the multiplicity due to fragmentation of colliding particles such as p, π/K and e under investigation.

46569 E_6 theories and Higgs boson pair production in e^+e^- annihilation. Rizzo, T.G. (Ames Lab., IA; Iowa State Univ. of Science and Technology, Ames). *Physics Letters [Section] B;* **191**: No. 1/2, 187-190(4 Jun 1987). Contract W-7405-ENG-82.

The production of pairs of Higgs bosons in e^+e^- annihilation in the standard model can only proceed at the one-loop level in the limit that the electron mass is ignored. In E_6 models we show that the existence of exotic leptons and off-diagonal Higgs boson couplings can lead to an appreciable rate for the $e^+e^- \rightarrow 2H^0$ process at the tree level if the mixing between ordinary and exotic leptons is not too small.

46570 QCD glueballs in the presence of dynamcial fermions in a small periodic box. Gavai, R.V.; Gocksch, A.; Heller, U.M. (Brookhaven National Lab., Upton, NY, USA. Physics Dept.; California Univ., San Diego, La Jolla, USA. Dept. of Physics; California Univ., Santa Barbara, USA. Inst. for Theoretical Physics). *Physics Letters [Section] B;* **190**: No. 1/2, 182-186(21 May 1987). Contract AC02-76CH00016;AS03-81ER40029.

We present first results for the masses of the O/sup ++/ and 2/sup ++/ glueballs obtained from a simulation of lattice QCD on a 4/sup 3/.24 lattice with the effects of dynamical fermions included using the pseudo-fermion method. The masses are determined from the exponential falloff of adjoint line correlation functions. We find that M /sub 2++/ < M/sub 0++/, extending an earlier result by Berg, Billoire and Vohwinkel for the pure gauge case to the full theory.

46571 QCD predictions for the photon structure function. Antoniadis, I.; Marleau, L. (Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 1236-1239 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00515.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

This paper presents from a pedagogical point of view, the treatment of the unphysical singularities appearing in the point-like contribution of the photon structure function, F/sup γ//sub 2/ (x,Q/sup 2/). The treatment, based on the parametrization of a singular term, is compared with various other approaches. The authors estimate the magnitude of higher order corrections.

46572 The fifth force. Fischbach, E.; Aronson, S.H.; Sudarsky, D.; Szafer, A.; Talmadge, C. (Physics Dept., Purdue Univ., West Lafayette, IN 47907). pp 1021-1031 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The authors present a phenomenological description of the "fifth force" which focuses on the implications of the existing data

from satellite and geophysical measurements of gravity, the Eotvos experiment, decays into hyperphotons, and the energy-dependence of the K/sup 0/ - K-bar/sup 0/ parameters.

46573 **KMC unitarity and new physics.** Marciano, W.J. (Brookhaven National Lab., Upton, NY 11973). pp 815-818 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC02-76CH00016.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Experimental constraints on the Kobayashi-Maskawa-Cabibbo (KMC) matrix are surveyed and shown to provide a test of the standard model at the level of its O(α) radiative corrections. The three generation prediction BR(K/sup +/ → π/sup +/ νν-bar) ≅ (0.35 — 3) x 10/sup -10/ is reviewed and the potential for enhancement up to ≈ 3 x 10/sup -9/ due to the fourth generation mixing is described. Constraints on additional neutral gauge boson masses are also discussed.

46574 **Substructure: A brief summary.** Harari, H. (Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 460-462 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00515.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The present status of substructure theories for Higgs particles, quarks, leptons and gauge bosons is briefly summarized.

46575 **First observation of the decay π/sup +/→e/sup +/e/sup -/e/sup +/ν and A determination of the formfactors F/sub V/, F/sub A/ and R.** Grab, C. (Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 870-873 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The radiative pion decay π/sup +/ → e/sup +/e/sup -/e/sup +/ν is observed for the first time with a branching ratio of (3.4+-0.5) x 10/sup -9/. From the kinematical distribution of 79 events information on the form factors was extracted. The vector form factor F/sub V/ was found to have the same sign as the pion decay constant f/sub π/. For the axial -vector form factors the following values have been measured: γ=F/sub A//F/sub V/ = 0.7+-0.5 and ξ=R/F/sub V/ = 2.3+-0.6. This value of γ agrees well with the small positive value of (0.53+-0.06) and excludes the large negative value obtained in π/sup +/ → e/sup +/νγ experiments.

46576 **Status of the UCLA project for lattice calculation of weak matrix elements.** Bernard, C.; Draper, T.; Hockney, G.; Soni, A. (Dept. of Physics, Univ. of California, Los Angeles, CA 90024). pp 825-830 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The authors give a very brief review of the status of the UCLA project for calculation of weak matrix elements on the lattice. In the past several months they have increased their data sample by over an order of magnitude over our pilot project. Numerous practical difficulties still remain that do not yet allow them to quote a value for the KK-bar mixing matrix element for left-left currents.

46577 **Weak interaction matrix elements with staggered fermions.** Sharpe, S.R. (Physics Dept., FM-15, Univ. of Washington, Seattle, WA 98195). pp 559-562 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

An overview of the results of the Los Alamos Advanced Computing Group is given. The theory behind the measurement of Weak Interaction Matrix Elements using staggered fermions is presented, and contrasted with that for Wilson fermions. This is followed by a preliminary discussion of numerical results on a 12/sup 3/ x 30 lattice.

46578 **sin/sup 2/ θ/sub w/ and radiative corrections.** Marciano, W.J. (Brookhaven National Lab., Upton, NY 11973). pp 999-1002 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC02-76CH00016.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Precision measurements of sin/sup 2/θ/sub w/ and the effects of radiative corrections are surveyed. A world average sin/sup 2/θ/sub w/ = 0.229 +- 0.004 is obtained. Comparison of deep-inelastic ν/sub μ/N scattering and m/sub w/ or m/sub z/ is shown to test the standard model at the quantum loop level and constrain new physics. Implications for grand unified theories are briefly discussed.

46579 **Implications of the observed K-M angles on future physics.** Shin, M. (Physics Dept., Brown Univ., Providence, RI 02912). pp 763-767 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The author discusses the implications of the observed values of the K-M angles on the structure of particle physics beyond the standard model. A hypothesis on the structure of quark mass matrices is proposed along with S.S.B. as the origin of weak-CP violation. The entire K-M angles are well understood in terms of the quark mass ratios alone. Possible symmetries in the family space are discussed. The implications on future experiments are: Γ(b→μeν/sup -/)/Γ(b→ceν/sup -/) = (8.8/sub -3.8//sup +5.8/)x10/sup -3/, and m/sub t/ =42.6/sub -9.5//sup +19.4/ GeV, 48.8/sub -11.5//sup +24.1/ GeV, 56.2/sub -14.3//sup +31.3/ GeV, for vertical barV/sub cb/vertical bar =0.04, 0.05, and 0.06 respectively. ν/sub e/-ν/sub μ/, ν/sub μ/-ν/sub tau/ oscillations may be observable in a foreseeable future.

46580 **The stochastic cell model for hadronic multiparticle distributions.** Carruthers, P.; Shih, C.C. (Theoretical Div., Los Alamos National Lab., Los Alamos, NM 87545). pp 174-185 of Proceedings of the XV international symposium on multiparticle dynamics. Gustafson, G.; Peterson, C. Teaneck, NJ; World Scientific Pub. Co. (1984). (CONF-8406183—).

From 15. international symposium on multiparticle dynamics; Lund, Sweden (11 Jun 1984).

Hadronic multiplicity distributions, KNO scaling and deviations are examined in this paper in a fairly general framework with emphasis on the negative binomial distribution.

46581 **Quark fragmentation in e/sup +/e/sup -/ annihilation.** Barbaro-Galtieri, A. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA 94720). pp 678-713 of Proceedings of the XV international symposium on multiparticle dynamics. Gustafson, G.; Peterson, C. Teaneck, NJ; World Scientific Pub. Co. (1984). (CONF-8406183—).

From 15. international symposium on multiparticle dynamics; Lund, Sweden (11 Jun 1984).

Detailed studies of the composition of jets and production properties of particles in jets are essential to understand the dynamics of jet evolution from the qq-bar pair to the final hadrons. The final hadrons, therefore, the interesting region of confinement and perturbative QCD have to be disentangled from non-perturbative effects like resonance or cluster decays. This section reviews the data available on properties of jets: particle type composition and spectra, rapidity and rho/sub perpendicular/ distributions.

6453 Particle Invariance Principles And Symmetries

46582 (IC—86/315) Our universe as an attractor in a superstring model. Maeda, Keiichi. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703066.

One preferential scenario of the evolution of the universe is discussed in a superstring model. The universe can reach the present state as an attractor in the dynamical system. The kinetic terms of the "axions" play an important role so that our present universe is realized almost uniquely. 26 refs, 5 figs.

46583 (IC—86/318) Euclidean supersymmetrization of instantons and self-dual monopoles. Lukierski, J.; Zakrzewski, W.J. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703068.

We show that N=1 D=4 Euclidean supersymmetry leads to the complexification of gauge potentials, and that to have a supersymmetric Euclidean D=4 theory which allows for the selfduality of real gauge potentials, the supersymmetry has to be extended to even N, i.e. at least N=2. We also discuss the supersymmetrization of Manton's procedure of using the dimensional reduction D=4 -> D=3 to derive self-dual monopoles from instantons. 15 refs.

46584 (IC—86/338) Symmetries and constants of motion for new KDV hierarchies. Li Yishen; Cheng Yi. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703074.

In this paper, two sets of symmetries with their infinite dimensional Lie algebra, one set of constants of motion in involution and their expressions in terms of scattering data are given. 6 refs.

46585 (IC—86/353) Response to some remarks by WRFS concerning renormalization group approach to a Bose fluid. Singh, K.K. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703078.

It is pointed out that the renormalization group approach for a Bose fluid developed by the author does not suffer from the infirmities referred to by WRFS (Weichman, Rasolt, Fisher, and Stephan). The crossover results obtained by them are shown to follow from two successive renormalization group transformations. 5 refs.

46586 (IC—86/369) Higher derivative super Yang-Mills theories. Bergshoeff, E.; Rakowski, M.; Sezgin, E. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703086.

The most general higher derivative Yang-Mills actions of the type (F/sup 2/+α2F/sup 4/) which are globally supersymmetric up to order α/sup 2/ in six and ten dimensional spacetimes are given. The F/sup 4/-terms turn out to occur in the combination α/sup 2/(tr F/sup 4/ - 1/4(tr F/sup 2/)/sup 2/), where the trace is over the Lorentz indices. This result agrees with the low energy limit of the open superstring in ten dimensions, where α is the string tension. Surprisingly, the transformation rules of the Yang-Mills multiplet receive order α/sup 2/ corrections even in the off-shell formulation. For the case of Abelian Yang-Mills group, the action is expressed in Born-Infeld form with a metric generically given by (1+α/sup 2/F/sup 2/+...). 9 refs.

46587 (IC—86/377) Irreducible *-representations of the Lie superalgebra osp(1,4) with finite-degenerated vacuum. Blank, J.; Havlicek, M. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87703089.

The method presented previously is applied to the Lie superalgebra B(0,2). A family of irreducible *-representations of this superalgebra and its real form osp(1,4) in terms of differential operators is obtained, the dimension of the vacuum subspace of π/sub J/ being J+1. Reduction with respect to the subalgebra sp(4,IR) approx.= so(3,2) is performed: the representation π/sub O/ reduces into three irreducible representations of so(3,2), whereas all the other π/sub J/ into two. 12 refs.

46588 (IC—86/378) On the relevance of some constructions of highest weight modules over (Super-) Kac-Moody algebras. Dobrev, V.K. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703090.

We correct and improve results of Wakimoto on the (ir)reducibility of his construction of A/sub 1//sup (1)/ highest weight modules (HWM). For a very large class of (super-) Kac-Moody algebras we argue that such a HWM is most relevant when it is isomorphic to a proper factor-module of the corresponding reducible Verma module with the same highest weight. In the same situation we present a general procedure to check the reducibility of the HWM in consideration. 14 refs.

46589 (IC—86/400) Superconformal invariance and superstring in background fields. Aldazabal, G.; Hussain, F.; Zhang, R. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703097.

We consider the propagation of the superstring on a general classical background containing the effects of the metric, the antisymmetric tensor and the dilaton fields. Using the operator product expansion method for two dimensional superconformal field theories we derive the equations for these fields as a consequence of the superconformal invariance of the theory. 19 refs, 4 figs.

46590 (IC—86/403) On the cosmological constant in the heterotic string theory. Gava, E.; Iengo, R. (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1987. 7p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703099.

We examine the possible physical assumptions which can be made in the heterotic string theory in order to derive the vanishing of the cosmological constant within the theory of modular forms on the moduli space. It seems that more mathematical information is needed to reach a definite result. 13 refs.

46591 (LA—11056-T) A search for the C-noninvariant decay $\pi 0$ yields 3γ. McDonough, J. (Los Alamos National Lab., NM (USA)). Sep 1987. Contract W-7405-ENG-36. 149p. Los Alamos National Lab., P.O. Box 1663, Las Alamos, NM 87545. File Number TI87013522.

A new experimental search for the C-violating decay $\pi^0 \rightarrow 3\gamma$ has been undertaken using the Crystal Box detector at the Clinton P. Anderson Meson Physics Facility (LAMPF). The observation of this decay mode would indicate that the electromagnetic interaction of hadrons is not invariant under charge conjugation. No 3γ events in excess of background were observed. The 90% confidence level upper limit for the 3γ branching ratio is lowered to 3.1×10^{-8}.

46592 (LA-UR—87-2574) T-violating effects in neutron physics and CP-violation in gauge models. Herczeg, P. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 31p. (CONF-8704152—2). NTIS, PC A03/MF A01; GPO Dep. File Number DE87013176.

From Workshop on tests of time reversal invariance in neutron physics; Chapel Hill, NC, USA (17 Apr 1987).

Discussed in this paper is the subject of T-violation in the transmission of polarized neutrons through polarized and oriented targets. Considered is the possible size of the T-violating effects both from a phenomenological point of view, and also in gauge models with CP-violation. A brief discussion of T-violating effects in β-decay is included.

46593 **(UWThPh—1987-10) CP violating phenomena and theoretical results.** Grimus, W. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1987. 140p. NTIS (US Sales Only), PC A07/MF A01. File Number DE87703132.

An introduction to CP violating phenomena is given and the standard model and its most popular low energy extensions in this context are reviewed. The discussion comprises the minimal supersymmetric extension of the standard model, left-right symmetry, the standard model with more than one Higgs doublet and gauged horizontal symmetries.

46594 **On the prospects of observing CP violation in bottom and charm decays.** Bigi, I.I. (Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 857-861 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00515.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

A review is given on the phenomenology of CP violation in B and D decays that has been developed over the last few years. Since a firm data base on B decays is still lacking, semiquantitative scenarios are drawn. Within the Standard Model one predicts asymmetries that can be as large as O (10%) with a confidence level that ranges between hopeful and considerable. Even so, millions of produced B and D mesons are required to make such studies feasible. A B factory would be crucial in such an endeavor.

46595 **Twisted strings and orbifolds.** Bagger, J.A. (The Institute for Advanced Study, Princeton, NJ 08540). pp 341-345 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Orbifold compactifications provide a practical approach to string symmetry breaking. They have the potential to bridge the gap between string theory and the physics of the standard model.

46596 **CP violation and weak decays of quarks and leptons.** Gilchriese, M.G.D. (Lab. of Nuclear Studies, Cornell Univ., Ithaca, NY 14853). pp 140-165 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

Recent experimental results on CP violation, tau decays and weak decays of light and heavy quarks are reviewed. Although there are a number of puzzles and discrepancies among experimental results, definitive disagreements with the predictions of the standard electroweak model do not exist.

46597 **Supersymmetry and superconductivity.** Nanbu, Y. (Univ. of Chicago, IL). pp 3-13 of Rationale of beings: Recent developments in particle, nuclear and general physics. Ishikawa, K.; Kawazoe, Y.; Matsuzaki, H.; Takahashi, K. Teaneck, NJ; World Scientific Pub. Co. (1986).

The fermionic and bosonic spectra that follow from a BCS mechanism have a rather simple and universal structure. It is shown, in typical examples, that the effective Hamiltonian that reflects such a structure can be factorized in a way similar to the case of supersymmetric systems. The underlying spectrum generating superalgebras are identified.

46598 **(CONF-870632—1) The m($A1^{++}$)/m(E^{++}) mass ratio from lattice gauge theory.** Berg, B.A. (Florida State Univ., Tallahassee (USA). Dept. of Physics). 30 Jul 1987. Contract FG05-87ER40319;FC05-85ER25000. 7p. (FSU-SCRI—87-41). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014138.

From International Europhysics conference on high energy physics; Uppsala, Sweden (25 Jun 1987).

Evidence is presented that, in the infinite volume continuum limit, the m($A1^{++}$) and the m(E^{++}) mass are almost degenerate. (A slightly lower $A1^{++}$ mass is preferred.) $A1^{++}$ and E^{++} are irreducible representations of the cubic group and supposed to correspond to spin 0^{++} and 2^{++}, respectively.

46599 **(CONF-8609142—8) Finite size scaling and lattice gauge theory.** Berg, B.A. (Florida State Univ., Tallahassee (USA). Dept. of Physics). 18 Dec 1986. Contract FG05-87ER40319;FC05-85ER25000. 34p. (FSU-SCRI—86-89). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014139.

From Lattice gauge theory meeting; Upton, NY, USA (15 Sep 1986).

Finite size (Fisher) scaling is investigated for four dimensional SU(2) and SU(3) lattice gauge theories without quarks. It allows to disentangle violations of (asymptotic) scaling and finite volume corrections. Mass spectrum, string tension, deconfinement temperature and lattice β-function are considered. For appropriate volumes, Monte Carlo investigations seem to be able to control the finite volume continuum limit. Contact is made with Luescher's small volume expansion and possibly also with the asymptotic large volume behavior. 41 refs., 19 figs.

46600 **(FNAL/Pub—87/112-A) Quark matter in the Hartree-Fock approximation.** Grassi, F. (Fermi National Accelerator Lab., Batavia, IL (USA)). Jul 1987. Contract AC02-76CH03000. 19p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013479.

An equation of state is computed for quark matter interacting through a phenomenological potential in the Hartree-Fock approximation. It is shown that for color-independent confining potentials, it can be approximated by the Hartree result and leads to a first order mass phase transition. For color-dependent confining potentials, a phase transition from a Fermi sphere to a Fermi shell is possible.

46601 **(IC—86/320) Soft photon radiation effects in monopole processes.** Blagojevic, M. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 24p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703069.

The infrared problem of the quantum field theory of monopoles and charges is reviewed and discussed in explicit terms. It is shown that the related radiation effects yield a superstrong damping of the cross-section in the relativistic kinematic region, which leads to a possible mechanism for partial monopole confinement. 24 refs, 8 figs.

46602 **(IC—86/341) Quantum electrodynamics based on self-energy, without second quantization: The Lamb shift and long-range Casimir-Polder van der Waals forces near boundaries.** Barut, A.O.; Dowling, J.P. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703075.

Using a previously formulated theory of quantum electrodynamics based on self-energy, we give a general method for computing the Lamb shift and related Casimir-Polder energies for a quantum system in the vicinity of perfectly conducting boundaries. Our results are exact and easily extendable to a full covariant relativistic form. As a particular example we apply the method to an atom near an infinite conducting plane, and we recover the standard

QED results (which are known only in the dipole approximation) in a simple and straight forward manner. This is accomplished in the context of the new theory which is not second quantized and contains no vacuum fluctuations. 37 refs.

46603 **(IC—86/342) Regular effective action of gauge field theory and quantum gravity.** Baaklini, N.S. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1986. 60p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87703076.

We present a perturbative formalism for the effective quantum action of a general Fermi-Bose field theory. We propose a unitary alternative to the conventional virtual ghost prescription for handling the functional integral of gauge fields, based on the functional space metric that is determined by the Dirac brackets of the Canonical theory. A gauge-invariant Gaussian cutoff is introduced by extending the functional space metric into a regular counterpart. The regular one-loop contributions of a scalar field to the photon and the graviton self-energies are computed. The otherwise logarithmically divergent contributions are found, in our scheme, to be independent of cutoff. 17 refs.

46604 **(IC—86/375) Schwinger models in arbitrary gauges and at finite temperature.** Thompson, G.; Zhang, R. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703088.

The Schwinger model is solved in an arbitrary gauge and for any temperature. 9 refs.

46605 **(IC—86/397) Bosonization in a two-dimensional Riemann Cartan geometry.** Denardo, G.; Spallucci, E. (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1987. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703096.

We study the vacuum functional for a Dirac field in a two dimensional Riemann-Cartan geometry. Torsion is treated as a quantum variable while the metric is considered as a classical background field. Decoupling spinors from the non-Riemannian part of the geometry introduces a chiral Jacobian into the vacuum generating functional. We compute this functional Jacobian determinant by means of the Alvarez method. Finally, we show that the effective action for the background geometry is of the Liouville type and does not preserve any memory of the initial torsion field. 20 refs.

46606 **(IC—86/402) O(5) x U(1) electro-weak gauge theory and the neutrino oscillations.** Samiullah, M. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703098.

In the present study we have employed the group O(5)xU(1). The left-handed leptons L/sub L//sup T/=(ν/sub e/ ,e,μ,ν/sub μ/)/sub L/ and the quarks Q/sub L//sup T/=(u,d,s,c)/ sub L/ are assigned to the four-dimensional representation of O(5). The righthanded particles are taken to be the singlets of the group. The group is safe and economical in the number of gauge bosons which we associate with each of its generators. We have achieved the quark mixing by introducing the Cabibbo angle through mixing of the additional gauge bosons as compared to the CWS model. Consistency of our work demands a simultaneous Cabibbo rotation of the neutrino fields along with the quarks d and s. Thus the neutrino oscillation angle turns out to be the Cabibbo angle. Using experimental results of Baker et al. we have set an upper limit on Δm/sup 2/ <= 1.3 ev/sup 2/. 10 refs.

46607 **(INIS-mf—10698) Quaternionic non Abelian relativistic quantum fields in four dimensions.** Albeverio, S.; Hoeegh-Krohn, R. (Bielefeld Univ. (Germany, F.R.). Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS); Bochum Univ. (Germany, F.R.); Oslo Univ. (Norway)). 1986. 16p. NTIS, PC E07; Available from NTIS as TIB/B87-10276.

BiBoS.; No. 239/86.

We give a simple construction of certain Lie-group valued Euclidean Markov random fields and quantum fields in four dimensions. These fields can be looked upon as non Abelian extensions of electromagnetic fields.

46608 **(KFKI—1986-69/A) Θ-sectors in the OS-construction.** Szlachanyi, K.; Vecsernyes, P. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Oct 1986. 26p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87703117.

By enlarging the functional space to include nonlocal fields which are sensitive to the space-time asymptotics of the configurations the Θ-sectors in the OS-Hilbert space were formally constructed. The question of inequivalence of the different Θ-sectors was studied on two quantum mechanical examples and in the case of non-Abelian gauge theories. 5 refs.

46609 **(KFKI—1987-01/A) Nonperturbative approach to quark propagator in the covariant, transverse gauge.** Gogokhia, V.Sh.; Magradze, B.A. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Jan 1987. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703122.

Schwinger-Dyson equation for the quark propagator is investigated in the infrared region. Confinement is implemented in two different ways, assuming that the gluon propagator in covariant, transverse gauge becomes infrared singular like q/sup -4/ and δ/sup 4/(q) at small momenta, respectively. Slavnov-Taylor identity is used to fix the low-energy behaviour of the corresponding quark-gluon vertex function. In both cases nonlinear differential equation systems were obtained for the quark propagator. Two different groups of solutions were found, but all possible solutions proved to be of confinement-type. 30 refs.

46610 **(LBL—23440) Anomalies in gauge theories.** Hwang, Dae Sung. (Lawrence Berkeley Lab., CA (USA)). Mar 1987. Contract AC03-76SF00098. 56p. (UCB-PTH—87/20). NTIS, PC A04. File Number DE87014087.

In a situation where a symmetry at the classical level is not a symmetry at the quantum level, the amount by which an effective action violates the symmetry, if it cannot be removed by adding a local functional to the effective action, is called an anomaly. Various topics of anomalies in two dimensions are studied. Topics covered include the anomalies of Yang-Mills gauge theory, gravitational theory, and supersymmetric gauge theory. The solution of the anomaly equation (the Wess-Zumino term) is obtained with only gauge fields, without auxiliary fields. A method is found to obtain the anomaly of the chiral current from the Schwinger terms of the equal time commutation relations. In the study of gravitational anomaly, Feynman diagrams are calculated to get an effective action, and it is shown, up to the second non-trivial order, that this effective action is in agreement with the anomaly obtained by the differential geometric method. A supersymmetric extension of the gauge anomaly is obtained, and it is shown that this is the origin of a supersymmetry anomaly in the Wess-Zumino gauge. An effective action whose variations give rise to the gauge and supersymmetry anomalies in the Wess-Zumino gauge is obtained. (LEW)

46611 **(LBL—23573) Probing the W-Z-Higgs sector of electroweak gauge theories at the superconducting super collider.** Gunion, J.F. (Lawrence Berkeley Lab., CA (USA); California Univ., Davis (USA). Dept. of Physics). Oct 1986. Contract AC03-76SF00098. 14p. (CONF-8606215—44). NTIS, PC A02. File Number DE87014022.

From Summer study on the physics of the superconducting super collider; Snowmass, CO, USA (23 Jun 1986).

We review and summarize the procedures for exploring at the SSC the W-Z-Higgs sector of SU(2)/sub L/ x U(1) and extended gauge theory versions thereof, including supersymmetric and left-right symmetric models.

46612 **(SLAC-PUB—4352) An introduction to charm and heavy quark physics.** Gilman, F.J. (Stanford Linear Accelerator Center, Menlo Park, CA (USA)). Jun 1987. Contract AC03-76SF00515. 46p. (CONF-8706185—1). NTIS, PC A03. File Number DE87013589.

From Charm physics symposium; Beijing, China (4 Jun 1987).

The physics of the electroweak and strong interactions in the standard model are reviewed, especially as they apply to the tau lepton and to charm and heavy quark physics.

46613 **(UWThPh—1987-08) Quantization of fermions in external soliton fields.** Grosse, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1987. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703131.

Recent results on representations of the canonical anticommutation relations, implementability of gauge transformations, calculation of the algebra of charges and determination of a ground state charge, which may become fractional, are reviewed.

46614 **(UWThPh—1987-11) Finite quantum field theories and supersymmetry.** Lucha, W.; Neufeld, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1987. 4p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703133.

We discuss the consequences of requiring finiteness for a general renormalizable quantum field theory.

46615 **Tabulation of astrophysical constraints on axions and Nambu-Goldstone bosons.** Cheng, H. (Physics Department, Indiana University, Bloomington, Indiana 47405). *Physical Review* [*Section*] *D: Particles and Fields;* **36**: No. 6, 1649-1656(15 Sep 1987).

Astrophysical constraints on the couplings of light and weakly coupled pseudoscalar particles (axions, Majorons, familons, ...) from considerations of various stellar objects are summarized. We tabulate the astrophysical bounds on the mass and the decay constant of Dine-Fischler-Srednicki-Zhitnitsky (DFSZ) axions and Kim-Shifman-Vainshtein-Zakharov (KSVZ) axions, on the triplet Majoron vacuum expectation value v/sub T/, and on the familon breaking scale. The lower bound of the Peccei-Quinn breaking scale in the KSVZ model is generally one order of magnitude weaker than that in the DFSZ model. The most stringent limit on v/sub T/<2 keV is obtained from considerations of Majoron emission from the cores of neutron stars. Bounds on the strength of the 1/r potential mediated by Gelmini-Roncadelli Majorons are also given.

46616 **Vacuum state of complex scalar fields in SO(2,1)-invariant backgrounds.** Floreanini, R.; Vinet, L. (Center for Theoretical Physics, Laboratory for Nuclear Science dge, Massachusetts 02139). *Physical Review* [*Section*] *D: Particles and Fields;* **36**: No. 6, 1731-1739(15 Sep 1987).

We consider complex scalar fields in two-dimensional de Sitter space minimally coupled to an SO(2,1)-invariant Maxwell potential and construct an ultraviolet-finite functional representation of the symmetry generators in the Schroedinger picture. We find that there is a unique vacuum state which is strictly SO(2,1) invariant.

46617 **Renormalization versus the Gaussian effective potential.** Wudka, J. (The Harrison M. Randall Laboratory of Physics, The University of Michigan, Ann Arbor, Michigan 48109). *Physical Review* [*Section*] *D: Particles and Fields;* **36**: No. 6, 1745-1753(15 Sep 1987).

In this paper we study the variational upper bounds to the effective potential with the proper inclusion of all renormalization effects. We find that the Gaussian effective potential is well defined in $1+1$ dimensions but not so for higher dimensionalities. This problem, and possible ways of evading it, are discussed to some extent. All calculations are performed in the Schroedinger representation.

46618 **String field theory at finite temperature.** Leblanc, Y. (Center for Theoretical Physics, Laboratory for Nuclear Science dge, Massachusetts 02139). *Physical Review* [*Section*] *D: Particles and Fields;* **36**: No. 6, 1780-1793(15 Sep 1987).

We present a real-time formalism enabling us to compute statistical averages of various quantum string field correlation functions and scattering amplitudes in the context of perturbation theory and functional methods. Second quantization of the string fields is carried out in the path-integral representation. Our finite-temperature formalism is a generalization of thermo field dynamics to string field theory for which a doubling of the physical string field degrees of freedom is required. Temperature formally enters our construction by imposing boundary conditions (Kubo-Martin-Schwinger condition) in the generating functional for the string field. Some explicit computations for the case of covariant open bosonic string theory are carried out.

46619 **Quantum electrodynamics in the temporal gauge.** Haller, K. (Department of Physics, University of Connecticut, Storrs, Connecticut 06268). *Physical Review* [*Section*] *D: Particles and Fields;* **36**: No. 6, 1830-1838(15 Sep 1987).

A canonical formulation is given for quantum electrodynamics in the temporal gauge. A procedure is developed for implementing the gauge-fixing condition $A_0 = 0$ and Gauss's law as time-independent constraints. The resulting formalism is shown to be physically equivalent to quantum electrodynamics in the Coulomb and Lorentz gauges. It is demonstrated that photon ghosts are appropriate for the representation of the longitudinal vector potential. Propagators for the longitudinal vector potential are derived and compared to results obtained by other authors. Implications for quantum chromodynamics are discussed.

46620 **Yang-Mills theory and quantum chromodynamics in the temporal gauge.** Haller, K. (Department of Physics, University of Connecticut, Storrs, Connecticut 06268). *Physical Review* [*Section*] *D: Particles and Fields;* **36**: No. 6, 1839-1845(15 Sep 1987).

A canonical formulation is given for Yang-Mills theory and quantum chromodynamics in the temporal gauge. Operator constraints are avoided so that canonical commutation rules apply throughout. The use of ghost operators for longitudinal and time-like gluons permits the selection of states that obey the gauge-fixing condition and Gauss's law as time-independent constraints. Propagators for longitudinal gluons are evaluated and an argument is given in support of the conclusion that the part of the propagator that violates time-translation invariance has no effect on perturbative S-matrix elements. The validity of asymptotic free-field representations for quarks and gluons in perturbative S-matrix calculations is related to the Lie algebra that characterizes the gauge theory.

46621 **Universal W,Z scattering theorems and no-lose corollary for the SSC.** Chanowitz, M.S. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA 94720). pp 445-449 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The experimentally verified relationship M/sub w/ = M/sub z/ cos θ/sub w/ implied that the physics underlying electroweak symmetry breaking must become visible at or below 1 TeV in the following sense, either there are spin zero bosons much lighter than 1 TeV or there are enhanced cross sections for W, Z pair production. The latter enhancements would signal a new sector of strongly interacting particles at the 1 TeV scale or higher and could be observed at the SSC even if the associated new spectrum were so much heavier than 1 TeV that it could not be produced and studied directly.

46622 **Phenomenological aspects of unified theories.** Peccei, R.D. (DESY, D-2000 Hamburg). pp 3-24 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The author briefly discusses two new phenomena of recent interest, the 5/sup th/ force and variant axions. The former, for its elucidation, will require further gravitational experiments, but the author concludes that variant axions are now definitely rules out experimentally. Various aspects of superstring phenomenology are then addressed, including some of the generic predictions of su-

perstrings and some of its generic problems. In particular, he discusses some of the phenomenological consequences of having an extra Z^0 boson and the circumstances under which this excitation is a genuine prediction of superstrings. Since it is likely that a more reliable relic of superstrings will be provided by the presence of superpartners at low energy ($\leq$ TeV), he discusses some of the bounds for squarks and gluinos obtained at the SppS collider and the expectations for their production at the Tevatron. As a final topic, he touches upon some of the consequences that result from having the Fermi scale arise from an underlying theory. Some aspects of the composite Higgs model and of the strongly coupled standard model are briefly reviewed.

46623 **Studies of chiral symmetry in a spontaneously broken lattice gauge theory.** Lee, I.H. (Physics Dept., Brookhaven National Lab., Upton, NY 11973). pp 577-580 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The phase diagram of lattice SU(2) gauge theory with fundamental representation Higgs field is probed by l = 1/2 and l = 1 fermions. Quenched calculations of (psi-barpsi)l show two distinct regions characterized by broken or unbroken chiral symmetry. The location of the boundary between the two regions depends on the representation l of the fermions. For l = 1/2 fermions, the author has verified the presence of Nambu-Goldstone bosons ("pions") in the region where chiral symmetry is broken and have found evidence for massless physical fermions in the chirally symmetric region.

46624 **Status of the Columbia lattice parallel processor project.** Brown, F.R. (Dept. of Physics, Columbia Univ., New York, NY 10027). pp 566-569 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The author reviews the status of the Columbia Lattice Parallel Processor project, in which parallel processing hardware with high performance floating point capability is used to perform large scale Monte Carlo studies of QCD. The project encompasses three stages; a 16-node machine with a nominal peak speed of 256 Mflops, a 1 Gflop 64-node machine, and a 16 Gflop 256-node machine. The 16-node machine was completed in April 1985, and has been employed since that time for the study of deconfinement in the pure gauge theory. The 64-node machine is under construction. The prototype node was completed in June 1986 and has successfully run a Monte Carlo program. Completion is expected by the end of 1986. The 256-node machine is now in the design stage. The modularity of the design makes evolutionary improvement of the vector processor relatively painless. This modularity together with the latest generation of floating point chips makes possible a very exciting aspect of the 256-node design, namely, a single node peak speed of 64 Mflops.

46625 **Harmonic superspace formalism and the consistent Chiral anomaly.** Li, W. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA 94720). pp 410-412 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The harmonic superspace formalism has been used to construct the consistent chiral anomaly in N = 1, d = 6 supersymmetric Yang-Mills theory. The expressions of the gauge anomaly Δ/sub s//sup phi/ and of the supersymmetric anomaly Δ/sub SUSY//sup phi/ are given together with the consistent condition.

46626 **Top quark and light Higgs scalar mass bounds in no-scale supergravity.** Roy, P. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA 94720). pp 387-389 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

No-scale supergravity theories with the minimal low-energy particle content are shown to become untenable for a top quark mass m/sub T/ much less than 40 GeV. For m/sub T/ $<$ 55 GeV, a stringent upper bound operates on the mass of the lowest-lying Higgs scalar. Further, the Higgs pseudoscalar is constrained to be nearly a quarter as massive as the gluino.

46627 **Operator formulation of Wittens string field theory.** Jevicki, A. (Physics Dept., Brown Univ., Providence, RI 02912). pp 351-355 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The author summarizes some recent developments on the construction of gauge invariant string field theory. The approach is based on Wittens differential geometric description of interactions and symmetries. He presents the explicit construction of the interaction vertex and discuss its properties.

46628 **Superstrings.** Schwartz, J.H. (California Institute of Technology, Pasadena, CA 91125). pp 105-116 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

String theories are promising candidates for perturbatively finite quantum theories of gravity. Mathematical consistency appears to require a supersymmetric theory in ten dimensions with gauge group E/sub 8/xE/sub 8/ or SO(32). The E/sub 8/xE/sub 8/ theory may be capable, after spontaneous compactification of six dimensions, of producing realistic low-energy physics. Superstring theory is developing very rapidly in the last year, but it will probably take a long time to make a convincing case that this is the route that nature has chosen.

46629 **Conformal invariance on Calabi-Yau spaces.** Nemeschansky, D. (Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 366-368 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—). Contract AC03-76SF00515.

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The possibility of superstring compactification on Calabi-Yau manifolds is analyzed. Despite the apparent non-zero β function at four loop order, it is possible to construct a conformally invariant sigma model on a Calabi-Yau manifold. The background metric is not Ricci flat, but is related to the Ricci flat metric through a (non-local) field redefinition.

46630 **Feeble forces.** Bars, I.; Visser, M. (Physics Dept., Univ. of Southern California, Los Angeles, CA 90089-0484). pp 1032-1037 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The authors discuss a scenario for obtaining extremely weakly coupled vector bosons from a variant of Kaluza-Klein theory. The proposed mechanism provides a natural framework for

the discussion of possible deviations from Newtonian gravity - deviations similar to those reported recently as a "fifth force."

46631 **Is the superstring semiclassical.** Dine, M.; Seiberg, N. (Institute for Advanced Study-Princeton, NJ 08540). pp 678-691 of Unified string theories. Green, M.; Gross, D. Teaneck, NJ; World Scientific Pub. Co. (1986). (CONF-850798—).

From Workshop on unified string theories; Santa Barbara, CA, USA (29 Jul 1985).

The various coupling constants and scales of the superstring are analyzed. Simple general considerations and an explicit calculation show that if the superstring is to describe our world, it is probably strongly coupled. Certain loopholes to the argument are discussed.

46632 **Gauge invariance of string fields.** Banks, T. (Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 621-634 of Unified string theories. Green, M.; Gross, D. Teaneck, NJ; World Scientific Pub. Co. (1986). (CONF-850798—). Contract AC03-76SF00515.

From Workshop on unified string theories; Santa Barbara, CA, USA (29 Jul 1985).

This report is presented to clarify the appearance of gauge bosons and gravitons in string theories. Free (bosonic) string field theory is invariant under an infinite set of gauge transformations which include Yang-Mills transformations and general coordinate transformations as special cases. The work was motivated by papers in which a covariant, gauge fixed free string action was constructed. The end of the report shows how to obtain action from a straightforward application of the Faddeev-Popov procedure. Two other groups have independently arrived at the form for the gauge invariant string action that is presented here.

46633 **Gauge invariant string actions.** Zwiebach, B. (Dept. of Physics, Univ. of California, Berkeley, CA 94720). pp 607-620 of Unified string theories. Green, M.; Gross, D. Teaneck, NJ; World Scientific Pub. Co. (1986). (CONF-850798—).

From Workshop on unified string theories; Santa Barbara, CA, USA (29 Jul 1985).

The main ideas behind the recent construction of the gauge invariant string free actions starting from BRST formulations are reviewed and examined in detail.

46634 **Torsion in superstrings.** Bars, I.; Nemeschansky, D.; Yankielowicz, S. (Dept. of Physics, Univ. of Southern California, Los Angeles, CA 90089-0484). pp 522-532 of Unified string theories. Green, M.; Gross, D. Teaneck, NJ; World Scientific Pub. Co. (1986). (CONF-850798—).

From Workshop on unified string theories; Santa Barbara, CA, USA (29 Jul 1985).

In this paper the authors discuss string theories on a background manifold with torsion. In the first part, candidate vacuum configurations for ten-dimensional superstrings are discussed. The authors compactify these on M/sub 4/xK, where M/sub 4/ is four-dimensional and K some compact six-dimensional manifold. In particular they are interested in investigating the existence of solutions with non-zero torsion on K. The compactification problem is approached both from the effective field theory point of view and directly using string considerations. The second part of the talk is devoted to the construction of string theories in curved space with torsion. The authors discuss both the Neveu-Schwarz-Ramond type string and the Green-Schwarz type string. Particular emphasis is put on the resulting constraints on space-time supersymmetry in the Green-Schwarz approach. This study uses two-dimensional nonlinear sigma models to describe the propagation of strings in background geometries with torsion. The background field can be understood as arising from condensation of infinite number of strings.

46635 **σ model approach to the heterotic string theory.** Sen, A. (Stanford Linear Accelerator Center, Stanford Univ., Stanford, CA 94305). pp 497-506 of Unified string theories. Green, M.; Gross, D. Teaneck, NJ; World Scientific Pub. Co. (1986). (CONF-850798—). Contract AC03-76SF00515.

From Workshop on unified string theories; Santa Barbara, CA, USA (29 Jul 1985).

Relation between the equations of motion for the massless fields in the heterotic string theory, and the conformal invariance of the σ model describing the propagation of the heterotic string in arbitrary background massless fields is discussed. It is emphasized that this σ model contains complete information about the string theory. Finally, the extension of the Hull-Witten proof of local gauge and Lorentz invariance of the σ-model to higher order in α', and the modification of the transformation laws of the antisymmetric tensor field under these symmetries are discussed. Presence of anomaly in the naive N = 1/2 supersymmetry transformation is also pointed out in this context.

46636 **Introduction to two dimensional conformal and superconformal field theory.** Shenker, S.H. (Enrico Fermi and James Franck Institutes, and Dept. of Physics, Univ. of Chicago, Chicago, IL 60637). pp 141-161 of Unified string theories. Green, M.; Gross, D. Teaneck, NJ; World Scientific Pub. Co. (1986). (CONF-850798—).

From Workshop on unified string theories; Santa Barbara, CA, USA (29 Jul 1985).

Some of the basic properties of conformal and superconformal field theories in two dimensions are discussed in connection with the string and superstring theories built from them. In the first lecture the stress-energy tensor, the Virasoro algebra, highest weight states, primary fields, operator products coefficients, bootstrap ideas, and unitary and degenerate representations of the Virasoro algebra are discussed. In the second lecture the basic structure of superconformal two dimensional field theory is sketched and then the Ramond Neveu-Schwarz formulation of the superstring is described. Some of the issues involved in constructing the fermion vertex in this formalism are discussed.

46637 **Differential geometry in string models.** Alvarez, O. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA 94720). pp 103-140 of Unified string theories. Green, M.; Gross, D. Teaneck, NJ; World Scientific Pub. Co. (1986). (CONF-850798—). Contract AC03-76SF00098.

From Workshop on unified string theories; Santa Barbara, CA, USA (29 Jul 1985).

In this article the author reviews the differential geometric approach to the quantization of strings. A seminal paper demonstrates the connection between the trace anomaly and the critical dimension. The role played by the Faddeev-Popov ghosts has been instrumental in much of the subsequent work on the quantization of strings. This paper discusses the differential geometry of two dimensional surfaces and its importance in the quantization of strings. The path integral quantization approach to strings will be carefully analyzed to determine the correct effective measure for string theories. The choice of measure for the path integral is determined by differential geometric considerations. Once the measure is determined, the manifest diffeomorphism invariance of the theory will have to be broken by using the Faddeev-Popov ansatz. The gauge fixed theory is studied in detail with emphasis on the role of conformal and gravitational anomalies. In the analysis, the path integral formulation of the gauge fixed theory requires summing over all the distinct complex structures on the manifold.

46638 **Introduction to the theory of relativistic strings.** Thorn, C.B. (Dept. of Physics, Univ. of Florida, Gainesville, FL 32611). pp 5-45 of Unified string theories. Green, M.; Gross, D. Teaneck, NJ; World Scientific Pub. Co. (1986). (CONF-850798—).

From Workshop on unified string theories; Santa Barbara, CA, USA (29 Jul 1985).

The author presents detailed information with the appropriate equations given as a solution leading to the usual perturbation theory with nonperturbative phenomena encoded. He concludes with a discussion of the "classical" by which he means zero loop approximation to interacting string theory. He discusses the systematic limit that involves large field strengths. The author believes that the bosonic string is probably of academic interest only but should apply such studies to the super string.

46639 Constraining the standard model with a supergroup. Ne'eman, Y. (Tel Aviv Univ., Tel Aviv). pp 14-28 of Rationale of beings: Recent developments in particle, nuclear and general physics. Ishikawa, K.; Kawazoe, Y.; Matsuzaki, H.; Takahashi, K. Teaneck, NJ; World Scientific Pub. Co. (1986).

The author has introduced in this paper the conjecture that the δμ(2/1) superalgebra transitions relate particle fields to ghost fields, of the type introduced by Feynman, DeWitt, Faddeev and Popov to ensure the Unitarity of Quantized Gauge Theories. δμ(2/1) thus resembles the Becchi-Rouet-Stora and the Curci-Ferrari algebras, also relating particle and ghost fields, and providing algebraic shortcuts, simplifying the imposition of Unitarity throughout the renormalization procedure. However, the author has also noted that for the spin 1/2 (matter) fields, the grading of the carrier vector-spaces is correlated with chirality. Indeed, the author has proved elsewhere that the (reducible) matrices representing U(2)/sub w/ x SU(3)/sub color/, when acting on supermultiplets constructed from juxtapositions of independent matter multiplets and graded according to chirality (thus disregarding Lorentz invariance in that auxiliary construction) have vanishing supertraces. Coming back to the statistics of the submultiplets in the matter representations, the author notices that μ/sub q/ of equation is proportional to the helicities of the leptons whose (y, vertical bar i vertical bar, i/sub 3/) quantum numbers are given by the above representations. Thus, the grading in δμ(2/1) coincides with helicity. The left-handed leptons are assigned to (-1, 1/2+), the left-handed quarks to (1/3, 1/2/sup +/); their right-handed antiparticles belong to (1, 1/2/sup +/) and (-1/3,1/2/sup +/).

46640 Microcanonical quantization and its applications. Iwazaki, A. (Univ. of California, Berkeley, CA 94720). pp 118-127 of Rationale of beings: Recent developments in particle, nuclear and general physics. Ishikawa, K.; Kawazoe, Y.; Matsuzaki, H.; Takahashi, K. Teaneck, NJ; World Scientific Pub. Co. (1986).

The author discusses microcanonical quantization and its interesting properties and explain our recent proposal for numerical application.

46641 Status of the theory of QCD plasma. Kapusta, J. (Brookhaven National Lab., NY). pp 820-839 of Proceedings of the XV international symposium on multiparticle dynamics. Gustafson, G.; Peterson, C. Teaneck, NJ; World Scientific Pub. Co. (1984). (CONF-8406183—). Contract AC02-79ER10364;AC02-76CH00016.

From 15. international symposium on multiparticle dynamics; Lund, Sweden (11 Jun 1984).

There is mounting evidence, based on many theoretical approaches, that color is deconfined and chiral symmetry is restored at temperatures greater than about 200 MeV. The authors present reasonable estimates of the energy density to be expected in high energy heavy ion collisions and suggest that QCD plasma is formed in the laboratory. Proposed experimental signals allow us to infer such quantities as the temperature, the quark dispersion relation, the space-time evolution and, perhaps, even the order of the phase transition.

46642 (BNL—40082) A matter-antimatter propulsion system for manned interstellar flight. Powell, J.R.; Pelligrino, C. (Brookhaven National Lab., Upton, NY (USA)). 1987. Contract AC02-76CH00016. 10p. (CONF-8710122—1). NTIS, PC A02. File Number DE87013311.

From 38. congress of the International Astronautical Federation; Brighton, UK (10 Oct 1987).

The major problems of interstellar flight are addressed in an integrated design of a star ship, Valkyrie. It employs a large diameter (~1 km) thin superconducting current ring to magnetically channel the reaction products from repetitive pellet explosions (either matter-antimatter or fusion) to generate thrust. The thermal intercept fraction on the star ship is very small, $\sim 10^{-6}$. Waste heat is radiated to space by a droplet radiator, which also protects against interstellar dust/gas. Maximum velocities in the range 10 to 20% of light speed appear possible. 3 refs., 8 figs., 2 tabs.

REFER ALSO TO CITATION(S) 46058, 46932

46643 (DOE/ER/05034—10) Experimental nuclear physics: Progress report, September 1986-July 1987. Hamilton, J.H. (Vanderbilt Univ., Nashville, TN (USA). Dept. of Physics and Astronomy). Aug 1987. Contract AS05-76ER05034. 30p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014586.

The research activities of the experimental nuclear structure group at Vanderbilt University carried out under Contract AS05-76ER05034 with the Department of Energy for the period September 1986 to July 1987 are reported here. Research continues in the areas of (1) in-beam γ-ray spectroscopy including cooperations with scientists at Oak Ridge, Univ. of Rochester, Univ. of Koeln, Louisiana State Univ., Univ. of Florida, Idaho Falls, and Univ. of Notre Dame; (2) studies of nuclei far from stability at UNISOR and at the recoil mass spectrometer at the University of Rochester; (3) nucleon transfer reaction and fusion-fission studies with scientists at ORNL, Argonne National Laboratory, Univ. of Michigan, and University of Kansas; (4) theoretical studies with scientists at Univ. Frankfurt, Univ. Tuebingen, Univ. Lund, Brookhaven, Lawrence Berkeley, and ORNL; (5) other studies. In general, abstracts of papers published or submitted for publication in this period make up this report along with brief reports of work in process and complete copies of a few conference papers.

46644 (DOE/ER/40309—1) Nuclear structure at intermediate energies: Progress report, November 1986-August 1987. Bonner, B.E.; Mutchler, G.S.; Phillips, G.C. (Rice Univ., Houston, TX (USA). Bonner Nuclear Labs.). 1 Sep 1987. Contract FG05-87ER40309. 44p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014236.

The report includes information on prior, current, and future experiments; nuclear theory; and instrumentation. Current experiments include single pion production in np scattering, spin transfer in hyperon production, photoproduction of high p/sub T/jets, and meson studies. Future experiments will continue current research and also include the production of lambda particles with heavy ions and the production of polarized antiproton beams at LEAR. Theoretical research programs are investigating the Gaussian effective potential (GEP), hadron-nucleus scattering as a function of nuclear size, nucleon structure, and exotic contributions to lambda production in pion-deuteron interactions. Instrumentation developments include proportional wire counters, other electronics, and computer systems. 13 refs., 1 tab.

46645 (DOE/ER/40316—1) Studies of complex fragment emission in heavy ion reactions: Progress report, September 1, 1986 through August 31, 1987. Sobotka, L.G. (Washington Univ., St. Louis, MO (USA). Dept. of Chemistry). 1987. Contract FG02-87ER40316. 51p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014533.

The production of large fragments, fragments with mass between light particles and fission fragments, in intermediate and high energy nuclear reactions has fostered the proposal of a number of novel reaction mechanisms. These include liquid-vapor equilibrium and nuclear shattering. Temporarily left in the wake of these exciting proposed mechanisms was the old standard, statistical decay of compound nuclei. To be sure, the standard treatment of compound nucleus decay did not deal with large fragment production. However, this omission was not due to any fundamental deficiency of statistical models, but rather an uncertainty concerning exactly how to splice large fragment emission into statistical models. A large portion of our program deals with this problem. Specifically, by studying the yields of large fragments produced in sufficiently low energy reactions we are attempting to deduce the asymmetry and l-wave dependence of large fragment emission from compound nuclear intermediates. This, however, is only half of the problem. Since the novel mechanisms proposed for large fragment emission

were spawned by intermediate and high energy reaction data, we must also realize the relevance of the compound nucleus mechanisms at high energies. It is not unreasonable to suspect that compound nucleus-like objects are formed with less than complete momentum transfer and perhaps less than complete mass transfer. Therefore the study of large fragment production in low energy reactions should go hand in hand with the study of energy, mass, and angular momentum transfer in non-compound reactions. This thread joins the apparently divergent subjects covered in this report. 39 refs., 24 figs., 2 tabs.

46646 **(GSI—87-7) Proceedings of the workshop on experiments and experimental facilities at SIS/ESR.** (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Apr 1987. 148p. (CONF-8703169—Absts.). NTIS, PC E11; Available from NTIS as TIB/B87-10626.

From Workshop on experiments and experimental facilities at SIS/ESR; Darmstadt, F.R. Germany (30 Mar 1987).

The present proceedings contain the abstracts of the proposals and letters of intent prepared by the authors for general distribution. The abstracts are organized according to the sessions in which they were presented at the workshop. The program of the workshop is also included as is the list of attendees. In addition we have included two recent descriptions of the accelerator facilities providing information on the latest status of the expected beam schedule for SIS and performance characteristics of the ESR. (orig./HSI).

46647 **(GSI—87-30-Prepr.) Proton radioactivity.** Hofmann, S. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). Jun 1987. 77p. Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt, Germany, F.R.

Also published in: Ivascu, M.; Poenaru, D.N. (eds.): Particle emission from nuclei, CRC Press, Boca Raton, FL (USA).

The purpose of the present review is to provide a summary and to make an attempt to connect the observed phenomena to nuclear structure effects which are well investigated for less neutron deficient species but become increasingly scarce approaching the proton drip line. (orig./HSI).

46648 **(KURRI-TR—277) Proceedings of the 2nd specialist research meeting on measurements of short-lived isotopes.** Yoshizawa, Yasukazu; Kawase, Yoichi; Okano, Kotoyuki (eds.). (Kyoto Univ., Kumatori, Osaka (Japan). Research Reactor Inst.). Apr 1986. vp. (In Japanese). (CONF-8602137—). NTIS (US Sales Only), PC A05/MF A01. File Number DE87780156.

From 2. specialist research meeting on measurements of short-lived isotopes; Kumatori, Japan (4 Feb 1986).

Individual papers have been cataloged separately. (WRF)

46649 **(LBL—22820) Nuclear Science Division: Annual report for the period October 1, 1985-September 30, 1986.** Mahoney, J. (ed.). (Lawrence Berkeley Lab., CA (USA)). Jul 1987. Contract AC03-76SF00098. 183p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE87013973.

Research has for the most part been carried out using three local accelerators, the Bevalac, the SuperHILAC and the 88-Inch Cyclotron. However, at CERN, oxygen-16 beams were accelerated to 3.2 TeV using the LBL-GSI heavy ion injector into the CERN SPS. First results obtained during the beam test period are presented in this report. Bevalac research has probed new regions of the nuclear matter equation of state. Studies of collisions between the most massive nuclei have revealed rich new phenomena such as collective flow, where the pressures generated force the emerging particles away from the beam direction. Experiments on dileptons (e^+e^- pairs) utilizing the newly completed Dilepton Spectrometer (DLS) are being carried out to glean new insights into the hot, high-density stage of the collision. Major new results on the nuclear structure of exotic, very neutron-rich light nuclei are being obtained by exploiting the projectile fragmentation process to produce secondary radioactive beams. The Laboratory has proposed the Bevalac Upgrade Project to replace the Bevalac's weak-focusing synchrotron with a modern, strong-focusing synchrotron to provide higher intensity and higher quality beams. The significant enhancement of the heavy ion capability at the 88-Inch Cyclotron as a result of the recent development of the ECR source has led to a renaissance of the cyclotron as indicated by the increased demand for beam time. A variety of other scientific activities were also carried out during this period. The Isotopes Project published the first edition of a new radioactivity reference book for applied users-The Table of Radioactive Isotopes and division members organized several major scientific meetings.

46650 **(NAC—85-03) Considerations for the initial production of /sup 123/I at the NAC.** Nortier, F.M.; Steyn, G.F.; Mills, S.J.; Rautenbach, W.L. (Council for Scientific and Industrial Research, Pretoria (South Africa). National Accelerator Centre). 1985. 9p. CSIR, National Accelerator Centre, P.O. Box 72, Faure, 7131, South Africa.

The /sup 127/I(p,5n) /sup 123/Xe reaction is evidently the best choice for the routine production of /sup 123/I at the NAC. The lack of detail information and local experience of this specific production method, makes the choice of technique and target material rather difficult. An on-line target has the advantage of negligible radioactive waste and minimal radiation dose to personnel because of the abscence of unnecessary handling of irradiated material. Because of its successfull applications at other places, it is clear that the NAC should eventually make use of an on-line target as well. In contrast, the batch process, although having the unavoidable radioactive waste problem, offers a simpler target design and would therefore require less development time. It may be advantageous to concentrate initially on developing the batch process with a sodium iodide tablet as target material in order to satisfy the current demand for /sup 123/I, at the same time gaining important experience.

46652 **(JINR—E-15-86-216) Charge symmetry violation in the /sup 2/H(d,n-vector)/sup 3/He and /sup 2/H(d,p-vector)/sup 3/H reactions.** Kozma, P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1986. 4p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703112.

Precision measurement of the angular distribution of polarized protons from the /sup 2/H(d,p)/sup 3/H reaction at about 1 MeV is compared with experimental data of the neutron polarization in the mirror reaction /sup 2/H(d,n)/sup 3/He at the same entrance and exit channel energies. In both comparisons the differences in polarizations of nucleons from d+d charge-symmetryc reactions are found to be larger than experimental errors. 12 refs.; 3 figs.

46653 **(RCNP-P—81) Report of study meeting on minority many body system.** (Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics). Mar 1986. 107p. (In Japanese). (CONF-8511299—Summ.). NTIS (US Sales Only), PC A06/MF A01. File Number DE87703017.

From Study meeting on minority many body system; Ibaraki, Japan (12 Nov 1985).

This book is the report of the study meeting on minority many body system held from November 12 to 13, 1985, in the Research Center for Nuclear Physics, Osaka University. The objective

of this study meeting was to discuss widely from theoretical and experimental viewpoints the problems of minority many body system in a low energy region such as various experimental studies of three and four nucleon systems and multiple particle emission reaction in nuclear reaction, making no bones of a narrow limit such as Faddeev's theory and its verification. In this book, the gists of 18 papers are collected. (Kako, I.).

46654 (BNL—40074) Kaon-nucleus reactions and hypernuclei. Dover, C.B. (Brookhaven National Lab., Upton, NY (USA)). 1987. Contract AC02-76CH00016. 18p. (CONF-8706166—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014283.

From International symposium on medium energy physics; Beijing, China (23 Jun 1987).

Recent advances in hypernuclear physics and kaon-nucleus scattering are discussed, with emphasis on the spectroscopy of Λ single particle states in heavy systems, as revealed by the (π^+,K^+) reaction. 26 refs., 8 figs.

46655 (BNL—40157) Spin-spin and isospin interactions from capture measurements. Mughabghab, S.F. (Brookhaven National Lab., Upton, NY (USA)). 1987. Contract AC02-76CH00016. 3p. (CONF-8708101—6). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014396.

From 6. international symposium on capture gamma-ray spectroscopy; Leuven, Belgium (31 Aug 1987).

A reanalysis of the ^{9}Be(n,γ)^{10}Be data yields a revised value of 1.25 +- 0.15 MeV for the spin-spin potential, V/sub Iσ/. Other evidence for such a term is derived from ^{10}B(n,γ)^{11}B where V/sub Iσ/ = 1.6 +- 0.6 MeV. The Lane isovector symmetry potential is determined from ^{48}Ca(n,γ)^{49}Ca where W/sub D/ = 11.3 - 67.8 ((N - Z)/A) MeV.

46656 (JINR—R-1-86-109) Angular dependence of slope parameters of invariant inclusive cumulative hadron production cross section in pC-interactions at 10 Gev/c and in π/sup -/C-interactions at 40 Gev/c. Kopylova, D.K.; Lyubimov, V.B.; Nikitina, V.F.; Togoo, R.; Tuvdendorzh, D.; Sherkulov, U.D. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1986. 5p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703114.

Invariant inclusive cross sections of π/sup -/-mesons and proton cumulative production from pC- and π/sup -/C-interactions (P/sub P/=10 GeV/c, P/sub π/=40 GeV/c) for five intervals of the back hemisphere angles in the laboratory coordinate system have been investigated on the images from the 2 meter propane bubble chamber. It has been found that the angular dependence of parameters defining the slope of inclusive spectra of cumulative π/sup -/-mesons (in contrast to cumulative protons) was similar for pC- and π/sup -/C-collisions.

46657 Spectroscopy of /sup 18/O: Radiative capture, / sup 14/C(α,γ)/sup 18/O. Gai, M.; Keddy, R.; Bromley, D.A.; Olness, J.W.; Warburton, E.K. (A. W. Wright Nuclear Structure Laboratory, Yale University, New Haven, Connecticut 06511). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1256-1268(Oct 1987).

The electromagnetic deexcitation of the six known /sup 14/C+α resonances in the range E/sub α/ = 1.7—2.7 MeV was observed with a Ge(Li) detector. Results for the branching ratios of the 7.62-, 8.04-, and 8.13-MeV /sup 18/O levels were found to be in agreement with previous measurements. Deexcitation of the 7.86-, 8.21-, and 8.28-MeV levels was observed for the first time. The radiative widths of these three (α,γ) resonances were determined. Electromagnetic transition strengths were derived for all the resonances from the gamma-ray branching ratios and the total radiative widths. A selective and enhanced E1 decay (—10/sup -2/ W.u.) of the 3_3^- state is observed; among the available 2^+ states lower in excitation, this 3_3^- state is observed to deexcite only to the 2_3^+ state. The 2_3^+ state is well understood to involve excitations of the /sup 16/O core, whereas the 2_2^+ and 2_1^+ states arise mainly from simple two neutron (sd-shell) configurations. The relevance of the α+ / sup 14/C radiative capture reactions for nucleosynthesis of heavier elements, at the hadronization phase of the big bang, is discussed.

46658 Mass dependence of pion single-charge exchange to the isobaric analog state at 20 MeV. Irom, F.; Baer, H.W.; Bergmann, A.G.; Bowman, J.D.; Heusi, P.; Fitzgerald, D.H.; Seftor, C.J.; Sadler, M.E.; Knudson, J.N.; Briscoe, W.J.; and others. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1453-1458(Oct 1987).

Forward-angle differential cross sections for pion single-charge exchange to the isobaric-analog state were measured for ^{7}Li, /sup 14/C, /sup 15/N, and /sup 120/Sn at 20 MeV incident beam energy. Back-angle differential cross sections for ^{7}Li were also measured. The shape of the angular distributions for light nuclei is featureless. The cross section for ^{7}Li at 180° is as large as the cross section at 0°. The A dependence of the 0° cross section can be expressed as g(N-Z)A/sup α/ (with g = 534 and α = 0.73 +- 0.09), leading to the conclusion that the nuclear medium is neither strongly absorbing nor fully transparent. The data are compared with optical-model calculations.

46659 Ground-state photoneutron reactions in sup18O. Jury, J.W.; Kuo, P.C.; McNeill, K.G.; Ross, C.K.; Weller, H.R.; Raman, S. (Department of Physics, Trent University, Peterborough, Ontario, Canada K9J 7B8). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1243-1248(Oct 1987).

Differential cross sections have been measured for the reaction /sup 18/O(γ,n$_0$)/sup 17/O over the region of excitation energy from 14 to 26 MeV. The angle-integrated cross section for the ground-state transition reveals that this channel accounts for less than 20% of the total photoneutron cross section in the structured pygmy resonance region (near 14 MeV) and is a small fraction (10—15 %) of the cross section in the region of the giant resonance (near 25 MeV). The values of angular distribution coefficients fitted to the data are consistent with a description of this reaction in which electric dipole excitations dominate the cross section in the pygmy resonance. Narrow regions exist near 15.0, 16.0, and 20.0 MeV where nonzero a_1 coefficients are observed indicating the absorption of non-E1 radiation. The measured cross section and a_2 coefficients are compared to a direct-semidirect calculation which gives reasonable agreement and suggests that f-wave neutron emission dominates the ground-state channel and that there is little justification for the introduction of E2 amplitudes other than a pure direct E2 term.

6514 Nuclear Properties And Reactions, A=20-38, Experimental

46660 (DOE/ER/03065—T6) Observation of antiproton annihilation in heavy nuclei at 100 GeV/c. Whitmore, J.; Lewis, R.A.; Oh, B.Y.; Smith, G.A.; Toothacker, W.S.; Neale, W.W.; Elcombe, P.A.; Hill, J.C,; Kowald, W.; Walker, W.D. (Pennsylvania State Univ., University Park (USA); Pennsylvania State Univ., Mont Alto (USA); Cambridge Univ. (UK). Cavendish Lab.; Duke Univ., Durham, NC (USA); Fermi National Accelerator Lab., Batavia, IL (USA); Kansas Univ., Lawrence (USA)). 1987. Contract AS05-76ER03065. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014202.

We report on the observation of antiproton annihilation in Mg, Ag, and Au nuclei at 100 GeV/c. The experiment was performed with the Fermilab 30″ bubble chamber spectrometer and associated Downstream Particle Identifiers. By identifying events without a leading anti p or anti n we have determined that (39+-6)% of the antiprotons annihilate in a heavy nucleus. We present this fraction as a function of atomic mass number and discuss the associated charged particle multiplicity. 5 refs., 3 figs.

46661 Double charge exchange to the double isobaric analog state at T/sub π/—292 MeV. Zumbro, J.D.; Fortune, H.T.; Burlein, M.; Morris, C.L.; Wang, Z.; Gilman, R.; Dhuga, K.S.; Burleson, G.R.; Rawool, M.W.; Garnett, R.W.; and others. (University of Pennsylvania, Philadelphia, Pennsylvania 19104). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1479-1483(Oct 1987).

Measurements of cross sections for the (π^+,π^-) reaction to the double isobaric analog state on targets of /sup 30/Si, /sup 34/S, /sup 44/Ca, /sup 50/Ti, /sup 51/V, /sup 52/Cr, and /sup 58/Ni at θ/sub lab/ = 5° and an incident pion kinetic energy of —292 MeV are presented. We also present limits for the cross section to the residual ground state for the four T>1 targets. The data are compared with a phenomenological two-amplitude model and with a two-amplitude model that uses seniority-zero shell-model wave functions. The latter model provides expressions for both ground state and double isobaric analog state cross sections.

6515 Nuclear Properties And Reactions, A=39-58, Experimental

46662 (INIS-mf—10657) Quasi-elastic transfer and charge-exchange reactions in collisions of /sup 48/Ti on /sup 42/Ca and /sup 26/Mg. Brendel, C. (Technische Hochschule Darmstadt (Germany, F.R.). Fachbereich 5 - Physik). 16 Jul 1985. 92p. (In German). NTIS (US Sales Only), PC A05/MF A01. File Number DE87752464.

At the GSI magnetic spectrometer quasi-elastic transfer and charge-exchange reactions of the system /sup 48/Ti + /sup 42/Ca at incident energies E/sub lab/ = 240, 300, and 385 MeV and additionally at the higher projectile energy the system /sup 48/Ti + /sup 26/Mg were studied each in the excitation energy range up to E/sub x/ ≃ 80 MeV. The transition strength was for each particle-hole configuration of the final system calculated by means of the DWBA and subsequently folded with a Breit-Wigner distribution. The localization of the strength of the cross section and the specific structure of the energy spectra were at incident energies between 6 and 8 MeV/amu for all angles well reproduced. By an extension of the core-excitation model to many-stage reactions the charge-exchange reaction /sup 48/Ti + /sup 42/Ca -> /sup 48/Sc + /sup 42/Sc could be described as sequential two-stage process. In the two-neutron stripping reaction /sup 48/Ti + /sup 42/Ca -> /sup 46/Ti + /sup 44/Ca a surprisingly narrow line with a width of the experimental resolution and an excitation energy of E/sub x/ = 17.8 MeV was measured at angles smaller than the grazing angle. In the /sup 48/Ti + /sup 26/Mg system the corresponding /sup 46/Ti spectra show also under forward angles structures at excitation energies between 8 and 16 MeV. These lines can be explained as two-neutron states with high spin. (orig./HSI).

46663 Elastic scattering of 30 MeV positive and negative pions from nickel isotopes. Wright, D.H.; Blecher, M.; Ritchie, B.G.; Boudrie, R.L.; Burman, R.L.; Leitch, M.J.; Alsolami, M.; Blanpied, G.S.; Escalante, J.A.; Mishra, C.S.; and others. (Virginia Polytechnic Institute and State University, Blacksburg, Virginia 24061). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1472-1478(Oct 1987).

Elastic cross sections for the scattering of positive and negative pions from /sup 58,60,64/Ni were measured at 30 MeV incident pion energy. A clear isotope effect was observed in the π^- cross sections while no effect was observed in the π^+ cross sections. The cross sections were compared to predictions made by various optical model calculations. In general, both π^+ and π^- cross sections were poorly described and the π^- isotope effects were not well reproduced. Anomalous effects first observed in pionic atoms may also appear in the present data.

46664 Isospin structure of giant resonances from pion inelastic scattering. Seestrom-Morris, S.J. (University of Minnesota, Minneapolis, MN 55455). *AIP (American Institute of Physics) Conference Proceedings;* **142**: No. 1, 54-67(15 Jun 1986). (CONF-8510137—).

From International workshop on nuclear structure at high spin, high excitation, and high momentum transfer; Spencer, IN, USA (21 Oct 1985).

A large amount of data has been accumulated for the excitation of the giant quadrupole resonance by pion inelastic scattering. The π^+ and π^- cross sections measured for the self-conjugate nucleus /sup 40/Ca are equal, but for heavier nuclei with a neutron excess the π^- cross section is always larger than the π^+ cross section. Furthermore, the ratio $\sigma(\pi^-)/(\sigma(\pi^+)$ increases more rapidly than does N/Z for nuclei from /sup 90/Zr to /sup 238/U. The analysis of the existing data to extract neutron and proton matrix elements is discussed. Recent energy-dependence data for the GQR in /sup 208/Pb are used to draw some conclusions about the model dependence of the extracted strengths and the relative neutron and proton strengths.

46665 (JINR—R-3-86-158) Measurement of /sup 67/Zn (n,α) /sup 64/Ni reaction thermal cross section and its interpretation in the framework of the Reich-Moore multilevel formalism. Vtyurin, V.A.; Zhak, A.; Popov, Yu.P.; Phuang Van Duan; Chadraabal, I.; Grebnev, A.V.; Kirilyuk, A.L.; Ukraintsev, V.F. (Joint Inst. for Nuclear Research, Dubna (USSR)). 1986. 9p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703116.

The cross section were measured of the /sup 67/Zn(n,α)/sup 64/Ni reaction on thermal neutrons. σ/sub α(sub 1)//sup th/ =130+40μb cross section of the α/sub 1/-transition into the first excited state of /sup 64/Ni has been obtained. The earlier observed suppression was confirmed of α/sub 0/-transition to the initial state on the level σ/sub α(sub 0)//sup th/ < 32 μb (in comparison with the calculated using the known parameters of resonances σ/sub α(sub 0)//sup th/=370 μb). This result is interpreted as an interference between the resonances. It is shown that, at a definite Γ/sub α(sub 0)/-width of the bound state with E/sub 0/=-337 eV, the experimental data for three and four levels could be described in the frame of the multilevel Reich-Moore formalism. Even though the probability of interference suppression is small, the above interpretation cannot be left aside. 14 refs.; 5 figs.; 4 tabs.

46666 Crystal blocking in heavy ion reactions. Gomez del Campo, J. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 447-453(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

The crystal blocking technique for measuring short lifetimes (10^{-18} s) was developed during the 1960s from the study of the channeling effect. Early blocking lifetime measurements involved light ion resonance reactions yielding typical lifetime values of the order of 10^{-17} s. Recently, studies on heavy-ion induced fission and fusion have extended the technique into the 10^{-18} to 10^{-19} s scale. In this work measurements of fusion for ^{16}O+Ge are presented for bombarding energies around 8 MeV/nucleon. Also measurements of the projectile fragmentation of 44 MeV/ nucleon ^{40}Ar+Ge are discussed. In all reactions studied the presence of particle evaporation is the dominant mechanism that determines the reaction times of ≃ 10^{-18} s measured with the blocking technique.

6517 Nuclear Properties And Reactions, A=90-149, Experimental

46667 (INIS-mf—10658) Study of the nuclear structure of /sup 128/Xe by means of the (α,n) reaction at threshold. Reinhardt, R. (Koeln Univ. (Germany, F.R.). Mathematisch-Naturwissenschaftliche Fakultaet). 8 Feb 1986. 192p. (In German). NTIS (US Sales Only), PC A09/MF A01. File Number DE87752468.

With the reaction /sup 125/Te(α,n)/sup 128/Xe near the Coulomb threshold 81 excited nuclear levels far from the Yrast line were populated. The determination of the level-specific quantities (J,π,E/sub Level/) was performed via following measuring methods: γ-excitation functions between 12.5 and 20 MeV beam energy; γ-angular distribution at 14.5 MeV α energy; γ-γ coincidence at

14.5 and 15.5 MeV projectile energy; conversion electron measurement at 16.5 MeV with transmission range between 400 und 1500 keV electron energy. 40 of the 81 populated states were not yet known. All levels hitherto only known from beta-decay data below 2.5 MeV were detected in the beam experiment. The ground-state band and the quasi-γ band could be populated up to the 10/sup +/ respectively 7/sup +/ and the level parameters verified. The non-selective character of the (α,n) reaction permitted to apply the direct population of a level (side feeding) to the spin determination. This was extensively discussed and an empirical fit formula given for the behaviour of the direct feeding as function of the beam energy, the level spin, and the level energy. In a comparison with the O(6) limit of the IBA-1 the collective states of the ground-state and the quasi-γ band were described. Furthermore the so-called tau=4 multiplet could be completely identified. (HSI).

46668 (KURRI-TR—277, pp 35-40) **Measurements on half-lives and absolute γ-ray emission probabilities of thermal-neutron induced fission-product nuclei.** Okano, Kotoyuki; Kawase, Yoichi; Funakoshi, Yoshihiro. (Kyoto Univ., Kumatori, Osaka, Japan. Research Reactor Inst.). Apr 1986. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE87780156. (CONF-8602137—).

From 2. specialist research meeting on measurements of short-lived isotopes; Kumatori, Japan (4 Feb 1986).

Pn value is one of the important microscopic nuclear constants which are related to delayed neutrons governing the dynamic characteristics of a nuclear power reactor. Though a large number of measurements have been reported in many publications, there are large differences among them. Pn values can be calculated based on accurate nuclear data on the β decay process of related nuclides. Basic nuclear data required include those on the absolute emission probability per decay (Pa value) of the principal γ-ray as well as on the half life. In the present study, an apparatus is developed which uses an ISOL (isotope separator on line) system for half-life measurement. A large type Ge(Li) detector is employed, and correction is made for the count loss due to the dead time of the pulse height analyzer and the pile up of pulses. Half-life measurement is carried out for various nuclides. In particular, there have been no or few reports to date on /sup 155/Nd, /sup 156/Pm, /sup 153/Nd, /sup 154/Nd and /sup 155/Pm. For other nuclides, the measurements made are in the neighborhood of the average of those reported previously. In addition, γ-ray emission probability (Pa) measurements are made for /sup 95/Rb, /sup 95/Sr and /sup 95/Y. Since only Rb is ionized in the ISOL system used here, the so-called filiation method is applied to the decay series /sup 95/Rb -> /sup 95/Sr -> /sup 95/Y -> /sup 95/Zr -> /sup 95/Mo. The systematics of logf/sub 1/t for the ground-ground first unique β-transition of /sup 91/Y, /sup 93/Y and /sup 95/Y shows good agreement with theoretical predictions. (Nogami, K.).

46669 **Absolute photoneutron cross sections for Zr, I, Pr, Au, and Pb.** Berman, B.L.; Pywell, R.E.; Dietrich, S.S.; Thompson, M.N.; McNeill, K.G.; Jury, J.W. (Department of Physics, The George Washington University, Washington, D.C. 20052). *Physical Review [Section] C: Nuclear Physics;* **36**: No. 4, 1286-1292(Oct 1987).

The photoneutron cross sections for /sup nat/Zr, /sup 127/I, /sup 141/Pr, /sup 197/Au, and /sup nat/Pb have been measured near the peak of the giant dipole resonance, with monoenergetic photons, in such a way that the absolute cross sections for these nuclei were intercalibrated, using /sup 141/Pr as a benchmark. The measured peak total photoneutron cross sections are, within an uncertainty of 2—3 %, 174, 252, 340, 502, and 602 mb for /sup nat/Zr, /sup 127/I, /sup 141/Pr, /sup 197/Au, and /sup nat/Pb, respectively. These results resolve outstanding discrepancies among previous measurements.

46670 **Transition through triaxial shapes of the light samarium isotopes and the beta decay of /sup 136,138,140/Eu.** Kern, B.D.; Mlekodaj, R.L.; Leander, G.A.; Kortelahti, M.O.; Zganjar, E.F.; Braga, R.A.; Fink, R.W.; Perez, C.P.; Nazarewicz, W.; Semmes, P.B.; and others. (University of Kentucky, Lexington, Kentucky 40506). *Physical Review [Section] C: Nuclear Physics;* **36**: No. 4, 1514-1521(Oct 1987).

Levels in /sup 136,138,140/Sm were populated by the beta decay of Eu, following (HI,pxn) reactions and on-line mass separation. The beta decay of /sup 136/Eu with a half-life of 3.9(+- 0.5) s was observed for the first time. Members of the γ band were observed in all three daughter nuclei. Spectroscopic calculations were made using the triaxial rotor model, with all parameters derived microscopically from a Woods-Saxon deformed shell model. Other spectroscopic models were also considered. Comparison with the data supports the characterization of these nuclei in terms of a triaxial intrinsic shape.

46671 **Beta-decay of light rare-earth /sup 130,132/Pr and /sup 132,134/Pm nuclei.** Kortelahti, M.; Zganjar, E.F.; Mlekodaj, R.L.; Kern, B.D.; Braga, R.A.; Fink, R.W.; Perez, C.P. (Louisiana State Univ., Baton Rouge, USA. Dept. of Physics; Oak Ridge Associated Universities, Inc., TN, USA; UNISOR, Oak Ridge, TN, USA; Kentucky Univ., Lexington, USA. Dept. of Physics and Astronomy; Georgia Inst. of Tech., Atlanta, USA. School of Chemistry). *Zeitschrift fuer Physik A: Atomic Nuclei;* **327**: No. 2, 231-232(Jun 1987). Contract FG05-84ER40159;AC05-76OR00033;AS05-76ER03346.

Gamma-ray spectra of neutron-deficient isotopes of /sup 130,132/Ce and /sup 132,134/Nd have been investigated from the β-decay of /sup 130,132/Pr and /sup 132,134/Pm. New gamma-bands of states were identified and the systematic trends are presented.

46672 **(UCRL—95543) Special targets for nuclear reaction and spectroscopic studies.** Lanier, R.G. (Lawrence Livermore National Lab., CA (USA)). 31 Jul 1987. Contract W-7405-ENG-48. 8p. (CONF-8709118—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87014229.

From American Chemical Society symposium series 324; Chicago, IL, USA (8 Sep 1987).

Strongly focused and monoenergetic charged-particle beams from modern accelerators and targets fabricated from quantities of isotopically enriched and stable materials are the essential components from many current nuclear physics experiments. Although a large body of this kind of experimental work requires substantial amounts of target material, an important subset of such experiments can be done with as little as a few μg of material. Experiments where charged particles or electrons can be focused on or transported to a detector are examples of accelerator-based studies which can be made with targets that contain relatively small amounts of material. For these kinds of studies, it then becomes possible to extend the domain of potential target materials to species which are very rare or which are unstable and undergo radioactive decay. At our laboratory during the last ten years, we have made targets for nuclear spectroscopy studies of ^{152}Eu (13.4y), ^{154}Eu (8.5y), ^{249}Bk (320d), ^{151}Sm (90y), and ^{148}Gd (75y). We will report our experience with fabricating these and other kinds of stable targets and discuss our plans for preparing additional targets which offer interesting and exciting prospects for future nuclear research studies. 12 refs., 1 fig., 2 tabs.

46673 **Level structure of /sup 159/Eu from the βp decay of the recently discovered isotope /sup 159/Sm.** Willmes, H.; Anderl, R.A.; Cole, J.D.; Greenwood, R.C.; Reich, C.W. (Department of Physics, University of Idaho, Moscow, Idaho 83843). *Physical Review [Section] C: Nuclear Physics;* **36**: No. 4, 1540-1545(Oct 1987).

An on-line isotope-separator facility has been used to determine the energies and intensities of sixteen γ rays following the β^- decay of the recently discovered isotope /sup 159/Sm. From these data, the existence of a new level in /sup 159/Eu at 1051.80 keV has been established, and tentatively assigned as the (7/2$^-$[523] bandhead. The /sup 159/Sm ground state is tentatively assigned as the (5/2$^-$[523] Nilsson state. Some of the deduced features of the reduced γ-ray transition probabilities as they relate to the proposed rotational-band structure in /sup 159/Eu are briefly discussed.

46674 Distribution of reaction strength in /sup 32/S+/ sup 182/W collisions. Keller, J.G.; Back, B.B.; Glagola, B.G.; Henderson, D.; Kaufman, S.B.; Sanders, S.J.; Siemssen, R.H.; Videbaek, F.; Wilkins, B.D.; Worsham, A.; and others. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review [Section] C: Nuclear Physics;* **36**: No. 4, 1364-1374(Oct 1987). Contract W-31-109-ENG-38.

The reaction /sup 32/S+ /sup 182/W has been studied at beam energies of 166, 177, 222, and 260 MeV with the goal of accounting for the distribution of the total reaction cross section among the main reaction channels. Cross sections as well as mass and energy distributions were measured over the entire angular range from 10° to 170° for elastic (which includes quasi-elastic), deep-inelastic, and fission-like products. Deep inelastic scattering accounts for a substantial fraction of the total reaction cross section at all energies, in particular near the barrier. This behavior is not predicted by current theories such as the extra push model. The angular distributions of fission-like products are more anisotropic than expected on the basis of the saddle point model at the two lowest energies, indicating a sizable contribution from quasi-fission processes, which is estimated from a quantitative analysis of this deviation.

46675 Quantum interference measurement using microfoil conversion electron (MICE) detection. Mullen, J.G.; Djedid, A.; Yelon, W.B.; Schupp, G.; Crow, M.L. (Purdue Univ., Lafayette, IN). *Applied Physics Communications;* **7**: No. 1-2, 119-120(Mar-Jun 1987). Contract FG02-85ER45199;FG02-85ER45200.

By using a MICE detector and a new technique for representing convolution integrals, they have been able to make precision measurements of the interference parameter and isomer lifetime for the 46.5 keV gamma transition in ^{183}W. Because the signal-to-background obtained by this technique is a factor of 20 greater than for conventional transmission Moessbauer spectroscopy, the present results indicate that a new level of accuracy in time reversal invariance studies using the Moessbauer approach may be possible, giving a critical test of some of the theories of T breakdown involving possible fifth forces in nature. The measured interference parameter is in very good agreement with theory.

46676 (GSI—87-25-Prepr.) Collectivity in composite fragment emission from relativistic heavy ion collisions. Bock, R.; Claesson, G.; Gutbrod, H.H.; Kolb, B.; Schmidt, H.R.; Doss, K.G.R.; Harris, J.W.; Kristiansson, P.; Lefebres, F.; Poskanzer, A.M. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); Lawrence Berkeley Lab., CA (USA); Oak Ridge National Lab., TN (USA); Los Alamos National Lab., NM (USA); Lund Univ. (Sweden); Muenster Univ. (Germany, F.R.)). May 1987. 10p. NTIS, PC E07; Available from NTIS as TIB/B87-10824.

Composite fragments of $2<Z<10$ have been measured in the Plastic Ball Spectrometer in 200 MeV/nucleon Au+Au and Au+Fe collisions. Strong azimuthal alignment of the fragments reveal the collective behaviour of the reaction.

46677 Energy dependence of the optical-model potential for fast-neutron scattering from bismuth. Lawson, R.D.; Guenther, P.T.; Smith, A.B. (Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review [Section] C: Nuclear Physics;* **36**: No. 4, 1298-1311(Oct 1987). Contract W-31-109-ENG-38.

Neutron differential-elastic-scattering cross sections of bismuth were measured at ≅0.5 MeV intervals from ≅4.5 to 10.0 MeV. At each incident energy 40 or more differential values were obtained between ≅18° and 160°. These data were combined with lower-energy results previously reported from this laboratory, and others available in the literature, to provide a detailed data base extending from ≅1.5 to 10.0 MeV. This data base was interpreted in terms of the conventional optical-statistical model and also using a model which included the surface-peaked real potential predicted by the dispersion relation. Particular attention was given to the energy dependence of the volume-integral-per-nucleon of the real potential, J/sub v/, to see if there was evidence of the Fermi surface anomaly. In the range 3.0—10.0 MeV, the present study indicates that dJ/sub v//dE is essentially constant, with a relatively large negative value of -6.0 to -9.0 fm^3, depending on the model used in the analysis. Below 3.0 MeV, there is some evidence for a decrease in the magnitude of dJ/sub v//dE. However, the effect is very small, and it is only when this trend is combined with considerations of the J/sub v/ values needed to give correct bound-state energies that evidence for the Fermi surface anomaly emerges. J/sub v/ and the geometry of the optical potentials found for /sup 209/Bi become equal to those explaining the higher-energy /sup 208/Pb data at about 10.0 MeV.

46678 (NEANDC(E)—282-U-Vol.3-EURATOM) Annual progress report on nuclear data, 1986. (Commission of the European Communities, Geel (Belgium). Central Bureau for Nuclear Measurements). Jun 1987. 69p. (INDC(EUR)—021/G). NTIS (US Sales Only), PC A04/MF A01. File Number DE87900963.

In the reporting period 1986 efforts for the improvement of the set of standard neutron cross-sections and other quantities selected within the INDC/NEANDC Standards File have continued. In the field of nuclear data for fission technology work was concentrated on European Requests in the NEA High Priority Request List. The measurements for fusion technology aimed at the improvement of relevant and important neutron data in particular for neutron transport calculations in the blanket which contains lithium as a tritium breeder material and for prediction of gas production. The radionuclide task followed three lines: determination of decay-scheme data, preparation of special standards and the improvement of measurement techniques including international comparisons. In the field of metrology of neutron flux and dose the Central Bureau for Nuclear Measurements participated in international comparisons of neutron fluence rates (1) at 565 keV, organized by NPL, Teddington and (2) at several energies via fission fragment counting with ionization chambers, organized by AERE, Harwell. The characteristic parameters of the CBNM graphite calorimeter were determined experimentally and the tissue-equivalent plastic (TEP) calorimeter was put into operation. 36 figs., 5 tabs.

46679 (UCRL—95966) Dipole strength functions in the actinide mass region. Gardner, D.G.; Gardner, M.A.; Hoff, R.W. (Lawrence Livermore National Lab., CA (USA)). 15 Jul 1987. Contract W-7405-ENG-48. 4p. (CONF-8708101—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014341.

From 6. international symposium on capture gamma-ray spectroscopy; Leuven, Belgium (31 Aug 1987).

We have calculated a number of neutron- and photon-induced reactions for the actinide nuclei ^{232}Th, ^{238}U, and ^{237}Np. By fitting average resonance capture (ARC) measurements and total neutron capture data, we deduced absolute dipole strength functions for ^{233}Th and ^{239}U. We have found that the M1/E1 ratio is the same as in the ^{176}Lu case, but the total transition strength was larger by about 27%. 17 refs., 4 figs., 1 tab.

46680 (UCRL—97089) Evidence for bimodal fission in the heaviest elements. Hulet, E.K.; Wild, J.F.; Lougheed, R.W.; Dougan, R.J.; Landrum, J.H.; Dougan, A.D.; Schaedel, M.; Hahn, R.L.; Baisden, P.A.; Henderson, C.M. (Lawrence Livermore National Lab., CA (USA)). Aug 1987. Contract W-7405-ENG-48. 12p. (CONF-870970—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014553.

From 5. international conference on nuclei far from stability; Lake Rosseau, Canada (14 Sep 1987).

We have measured the mass and kinetic-energy partitioning in the spontaneous fission of five heavy nuclides: ^{258}Fm, ^{259}Md, ^{260}Md ^{258}No, and ^{260}[104]. Each was produced by heavy-ion reactions with either ^{248}Cm, ^{249}Bk, or ^{254}Es targets. Energies of correlated fragments from the isotopes with millisecond half lives, ^{258}No and ^{260}[104], were measured on-line by a special rotating-wheel in-

strument, while the others were determined off-line after mass separation. All fissioned with mass distributions that were symmetric. Total-kinetic-energy distributions peaked near either 200 or 235 MeV. Surprisingly, because only a single Gaussian energy distribution had been observed previously in actinide fission, these energy distributions were skewed upward or downward from the peak in each case, except for ^{260}[104], indicating a composite of two energy distributions. We were able to fit accurately two Gaussian curves to the gross energy distributions from the four remaining nuclides. From the multiple TKE distributions and the shapes of the mass distributions, we conclude that there is a low-energy fission component with liquid-drop characteristics which is admixed with a much higher-energy component due to closed fragment shells. We now have further evidence for this conclusion from measurements of the neutron multiplicity in the spontaneous fission of ^{260}Md. 25 refs., 9 figs.

46681 Analysis of fissionable material using delayed gamma rays from photofission. Hollas, C.L.; Close, D.A.; Moss, C.E. (Los Alamos National Lab., NM). *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment;* **24/25**: No. 1, 503-505(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

Also published as report LA-UR—86-3363; CONF-861114—14–2.

The energetic gamma-ray spectra from the fission products of photofission have been investigated to determine whether photofission can identify heavily shielded fissionable material. Target samples of natural thorium, 93% enriched ^{235}U, natural uranium, and 93% enriched ^{239}Pu were irradiated with bremsstrahlung gamma rays produced by 10-MeV electrons from a small linear accelerator. The gamma-ray spectra for each of the four isotopes studied reveal a distinctive intensity distribution. For example, the intensity ratio of the pair of gamma rays at 1436 keV (^{138}Cs) and 1428 keV (^{94}Sr) is 1.9 for ^{235}U, 2.4 for ^{238}U, 1.7 for ^{232}Th and 1.4 for ^{239}Pu.

From 6. international symposium on capture gamma-ray spectroscopy; Leuven, Belgium (31 Aug 1987).

A review is given of several aspects, and empirical consequences, of the p-n interaction as it relates to the structure, phase transitions and collectivity of medium and heavy nuclei. The N/sub p/N/sub n/ scheme is reviewed as background material while the emphasis centers on a discussion of a related quantity, the P factor, and on the relationship of the integrated strength of the p-n interaction to the empirically observed "saturation" of B(E2) values in the mid-shell regions of deformed nuclei. 19 refs., 13 figs.

From 6. international symposium on capture gamma-ray spectroscopy; Leuven, Belgium (31 Aug 1987).

The level structure below 2 MeV in ^{163}Dy has been investigated using the ^{161}Dy(n,γ)^{163}Dy and ^{161}Dy(n,e$^-$)^{163}Dy reactions. The results for the positive parity excitations are discussed within the framework of an Interacting Boson Approximation (IBA-2) calculation. 7 refs., 1 fig., 1 tab.

46685 (BNL—40150) M1 transitions between collective levels and F-spin purity. von Brentano, P.; Frank, W.; Gelberg, A.; Harter, H.; Krips, W.; Casten, R.F.; Boerner, H.G.; Krusche, B. (Brookhaven National Lab., Upton, NY (USA); Koeln Univ. (Germany, F.R.). Inst. fuer Kernphysik; Institut Laue-Langevin, 38 - Grenoble (France)). 1987. Contract AC02-76CH00016. 9p. (CONF-8708101—7). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014390.

From 6. international symposium on capture gamma-ray spectroscopy; Leuven, Belgium (31 Aug 1987).

M1 transitions between low-lying collective levels in deformed nuclei are described within the IBM-2 framework. This is done by a special choice of the Hamiltonian which allows a simultaneous fit of energies, E2 and M1 transitions. Finally, the results are interpreted using the F-spin concept. 12 refs., 4 tabs.

46686 (CONF-8708102—2) Pion charge exchange and nuclear structure: II, Nuclear structure calculation. Bartel, J.; Johnson, M.B.; Singham, M. (Los Alamos National Lab., NM (USA); Rochester Univ., NY (USA). Dept. of Physics and Astronomy). 1987. Contract AC02-76ER02171. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014042.

From Pion nucleus physics: future directions and new facilities at LAMPF workshop; Los Alamos, NM, USA (17 Aug 1987).

Whereas the nuclear charge distribution, essentially determined by the protons, has been studied for decades in elastic electron scattering, a study of the neutron distribution in nuclei has only recently become possible through pion charge-exchange experiments. The excitation of the isobaric analog state (IAS) in pion single-charge-exchange reactions is one of the most prominent candidates for such an investigation which will be especially interesting for strongly deformed nuclei which can be aligned in magnetic fields. This contribution concentrates on calculations related to such a reaction for the rare-earth nucleus Ho-165. 8 refs., 3 figs.

46687 (GSI—87-24-Prepr.) New developments in nuclear fission. Hasse, R.W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.)). May 1987. 16p. (CONF-8706182—2-Prepr.). NTIS, PC E07; Available from NTIS as TIB/B87-10823.

From All-Union symposium on physics of nuclear fission; Obninsk, USSR (2 Jun 1987).

A few recently observed new effects in nuclear fission are reviewed from the experimental side and theoretical explanations are indicated: (i) The structures in the mass yields and in the maximum fragment kinetic energies in cold fission are due to Coulomb effects; (ii) Mass-symmetric fission of even-even nuclei does not proceed by splitting the nucleus into two equal parts and the fragments are differently deformed; (iii) The dip in the total fragment

kinetic energy at symmetry is due to a different symmetric fission barrier; (iv) In analogy to the cold compact fission events with highest kinetic energy, also those events of lowest kinetic energy but highest deformation are cold at the scission point; (v) Cold fission proceeds close to the saddle point.

46688 **(IC—86/276) Quark cluster model in the three-nucleon system.** Osman, A. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703055.

The quark cluster model is used to investigate the structure of the three-nucleon systems. The nucleon-nucleon interaction is proposed considering the colour-nucleon clusters and incorporating the quark degrees of freedom. The quark-quark potential in the quark compound bag model agrees with the central force potentials. The confinement potential reduces the short-range repulsion. The colour van der Waals force is determined. Then, the probability of quark clusters in the three-nucleon bound state systems are numerically calculated using realistic nuclear wave functions. The results of the present calculations show that quarks cluster themselves in three-quark systems building the quark cluster model for the trinucleon system. 33 refs, 2 figs.

46689 **(IC—86/300) Total disintegration of three-nucleon systems from charged π-mesons reactions.** Osman, A. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703060.

The nuclear reactions of incident charged π-mesons on three-nucleon system targets are considered. The double charge exchange process is considered for these reactions. The double-charge exchange reactions of charged π/sup +/ and π/sup -/ mesons on the /sup 3/H and /sup 3/He nuclei proceed through the only channel of total disintegration of these nuclei, leading to the final states of free three protons or three neutrons, respectively. The same Hamiltonian and the same nucleon-nucleon interaction are used in representing the initial and final nuclear states. The Faddeev formalism is used in describing the three nucleons. Numerical calculations are carried out for the differential and total cross sections using different nucleon-nucleon potentials. The present theoretical calculations are in good agreement with the experimental data. 18 refs, 6 figs.

46690 **(KFKI—1986-80/A) Thermodynamical considerations for the rehadronization of a quark-gluon plasma.** Lukacs, B.; Zimanyi, J.; Balazs, N.L. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Oct 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703119.

The thermodynamics of a quark plasma in equilibrium with a hadronic phase assuming strangeness conservation was studied. It is stated that the presence of strangeness conservation does not lead to a discontinuity in the chemical potential μ/sub s/ associated with the strange particles but to a coexistence region in the phase diagram. The discontinuity computed earlier is in fact the difference in the values of μ/sub s/ at the boundaries of the coexistence region keeping T fixed. 5 refs.

46691 (KURRI-TR—277, pp 41-47) **Mass formulas and β-decay theory of short-lived nuclei.** Yamada, Masami. (Waseda Univ., Tokyo, Japan. Science and Engineering Research Lab.). Apr 1986. (In Japanese). NTIS (US Sales Only), PC A05/MF A01. File Number DE87780156. (CONF-8602137—).

From 2. specialist research meeting on measurements of short-lived isotopes; Kumatori, Japan (4 Feb 1986).

The mass and β-decay represent important aspects of nuclei in an unstable state. The present report deals with theories for them. To analyze mass data, some terms have been proposed in addition to those involved in the Weizsacker-Bethe formula. Review is first made of such terms. There must be unknown higher-order terms and it should be noted that the introduction of a higher-order term would greatly affect the coefficients of low-order terms. The report then addresses shell terms, citing experimental results. A few characteristic phenomena including the mutual support of magicities are also described. Masses predicted by extrapolation of mass formulas are compared with experimental data, showing that existing formulas cannot give satisfactory values. Next, consideration is made on β-strength functions, and three types of theories for β-strength functions are reviewed. The final part of the report deals with the attempt to improve theories on the mass and β-decay conducted by the present author. Taking into account the mutual support of magicities, a term representing the interaction between a proton and neutron is introduced into a mass formula which has previously been proposed by the author. Considerations are made for the charge symmetry. For β-decay, an effort is currently made to improve the Gamow-Teller single-particle strength function. A few examples of improvements made on the function are presented and discussed. (Nogami, K.).

46692 **(RCNP-P—80) Report of fission study meeting.** (Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics). Mar 1986. 148p. (In Japanese). (CONF-8509407—Summ.). NTIS (US Sales Only), PC A07/MF A01. File Number DE87703016.

From Fission study meeting; Ibaraki, Japan (19 Sep 1985).

This book is the report of fission study meeting held from September 19 to 21, 1985 in the Research Center for Nuclear Physics, Osaka University. The objective of this study meeting was to stimulate the research on nuclear physics in Japan, which began to show new development accompanying the advance of the research on heavy ion nuclear reaction, and to make this a new starting point. More than 50 participants from physical, chemical and engineering fields, who have interest in the theory and experiment related to nuclear fission, gathered, and the meeting was a success beyond expectation. The contents covered a wide range including nuclear smashing reaction as well as nuclear fission in a narrow sense. In this book, the gists of 28 papers are collected. (Kako, I.).

46693 **(RCNP-P—83) Report of seminar on relativistic approach to nuclear reaction and nuclear structure.** (Osaka Univ., Ibaraki (Japan). Research Center for Nuclear Physics). May 1986. 196p. (In Japanese). (CONF-8511307—Summ.). NTIS (US Sales Only), PC A09/MF A01. File Number DE87703019.

From Seminar on relativistic approach to nuclear reaction and nuclear structure; Osaka, Japan (28 Nov 1985).

A seminar on 'Relativistic Approach to Nuclear Reaction and Nuclear Structure' was held in 1985 at Osaka University. This booklet includes twenty-four reports given at the seminar, which deal with: Conventional Nonrelativistic Description of Nuclear Matter and Nuclear Spin-Orbit Interactions; Relativistic Approach to Nuclear Structure; Atomic and Molecular Structure Calculations; Electromagnetic Interaction in Nucleus and Relativistic Effect; Nuclear Magnetic Moment in the Relativistic Mean Field Theory, Effective Mass and Particle-Vibration Coupling in the Relativistic σ-ω Model; Gauge Invariance in Relativistic Many-Body Theory; Relativistic Description of Nucleon-Nucleon Interaction in Review; σ-Particle in NN Interaction; Nuclear Optical Potentials Based on the Brueckner-Hartree-Fock Approach; Elastic Backscattering and Optical Potential; Description of Intermediate-Energy Nuclear Reactions; Dirac Phenomenology at E(p) = 65 MeV; Relativistic Impulse Approximation; Reaction Studies with Intermediate Energy Deuterons at SATURNE; Folding Model for Intermediate-Energy Deutron Scattering; Folding Model for Polarized Deutron Scattering at 700 MeV; Dirac Approach Problems and a Different Viewpoint; Relativistic Approach and EMC Effect; Quasielastic Electron Scattering; Response Function of Quasielastic Electron Scattering; Relativistic Hartree Response Function for Quasielastic Electron Scattering on /sup 12/C and /sup 40/Ca; Backflow-, Retardation- and Relativistic Effects on the Longitudinal Response Function of Nuclear Matter; Pion-Photoproduction in the σ-ω Model. (Nogami, K.).

46694 **(UCRL—97262) Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production.** Blann, M.; Remington, B.A. (Lawrence Livermore National Lab., CA (USA)). Aug 1987. Contract W-7405-ENG-48. 22p. (CONF-8706113—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014353.

From 6. Adriatic international conference on nuclear physics; Dubrovnik, Yugoslavia (15 Jun 1987).

We test a relaxation model based on two body nucleon-nucleon scattering processes to interpret phenomena observed in heavy ion reactions. We use the Boltzmann master equation to accomplish this. By assuming that the projectile nucleons share the total excitation with equal a-priori probability of all configurations, we are able to reproduce several sets of neutron spectra from ^{20}Ne and ^{12}C induced reactions on ^{165}Ho. With no additional free parameters our model successfully reproduces subthreshold pion production cross sections, high energy γ-ray spectra, and angular distributions of high energy γ-rays. 40 refs., 12 figs., 2 tabs.

46695 **Unitary meson-exchange πNN models: NN and πd elastic scattering.** Lee, T.H.; Matsuyama, A. (Physics Division, Argonne National Laboratory, Argonne, Illinois 60439). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1459-1471(Oct 1987). Contract W-31-109-ENG-38.

Within a unitary πNN theory a set of coupled integral equations defined in the NNdirect-sumNΔ direct-sumπNN subspace has been derived for examining the extent to which the NN and πd elastic scattering data can be both described by a class of meson-exchange πNN models. The considered models are constructued by using a previously developed subtraction procedure to extend the Paris, Bonn, Argonne-V14, and Reid NN potentials to include the coupling to the πNN production channel. The pion production through the Δ excitation is described by a πNbold-arrow-left-rightΔ vertex and a V/sub NN//sub bold-arrow-left-right//sub N//sub Δ/ transition potential, while the production through non-resonant πN interactions is described by a transition operator F/sub π//sub NN//sub bold-arrow-left-right//sub NN/. It is found that none of the constructed models can accurately reproduce all NN and πd elastic scattering data, in particularly the data of polarization observables. Our results indicate that either the conventional phenomenological parametrizations of baryon-baryon interaction at short distances are not valid in the intermediate energy region, or some genuine quark dynamics has already been revealed in the πNN data.

46696 **Bound-state beta decay of highly ionized atoms.** Takahashi, K.; Boyd, R.N.; Mathews, G.J.; Yokoi, K. (Department of Physics, The Ohio State University, Columbus, Ohio 43210). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1522-1528(Oct 1987).

Nuclear β decays of highly ionized atoms under laboratory conditions are studied. Theoretical predictions of β-decay rates are given for a few cases in which bound-state β decay produces particularly interesting effects. A possible storage-ring experiment is proposed for measuring bound-state β-decay rates, which will be most easily applied to the decay of $^{3}H^{+}$. .AE

46697 **Comment on "Electroexcitation of M4 transitions in /sup 17/O and /sup 18/O".** Millener, D.J. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1643-1645(Oct 1987). Contract AC02-76CH00016.

It is shown that the energies and strengths of states at high excitation energy in /sup 17/O which are strongly excited at high q by inelastic electron scattering may be understood in terms of p/sub 3/2//sup -1/ x d/sub 5/2/ weak-coupling configurations, and that the spin assignments suggested by Manley et al. are unlikely to be correct. Also, it is pointed out that a problem can arise in the interpretation of observed M4-like strength since M4 and E3 form factors from the magnetization current are known to be identical in shape for 0p→0d transitions (in addition, M2 and E1 form factors can also peak at high q). Comments are also made on states observed in /sup 18/O.

46698 **Spectral distribution calculations of the level density of /sup 24/Mg.** Strohmaier, B.; Grimes, S.M.; Satyanarayana, H. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1604-1610(Oct 1987).

Spectral distribution calculations of the level density of /sup 24/Mg are compared with experimental values for the level density of this nucleus as well as with Fermi gas calculations. Particular attention is paid to the technique used for the expansion. Traditional techniques which have utilized knowledge of the third and fourth moments of the Hamiltonian have yielded a distribution function that is not positive definite. Two alternative expansion methods are examined. One is found to be unacceptable because of the fact it does not yield a unique fit, but the second appears to be quite useful. Not only is the resultant expansion positive definite, but it appears capable in principle of giving a more detailed representation of the level density than the traditional method. Results of the calculation for two different basis sizes are compared.

46699 **Nuclear bound states of the eta^{0} meson and pion double-charge-exchange reactions.** Haider, Q.; Liu, L.C. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **36**: No. 4, 1636-1639(Oct 1987).

We predict a narrow resonance structure (Γ≅10 MeV) in the excitaton function of (π^{+},π^{-}) double-charge-exchange reactions at a pion kinetic energy of —419 MeV. This structure is due to the interference between the usual $\pi^{+}\rightarrow\pi^{0}\rightarrow\pi^{-}$ double-charge-exchange amplitudes, which have a smooth energy dependence, and a resonant $\pi^{+}\rightarrow eta^{0}\rightarrow\pi^{-}$ high-energy double-charge-exchange amplitude associated with the formation of a strongly bound eta-nucleus system. The latter process leads to a novel feature of the pion-nucleus interaction, the mesonic compound nucleus resonance.

46700 **Algorithm for integrating the Schroedinger equation.** Thorlacius, A.E.; Cooper, E.D. (TRIUMF, 4004 Wesbrook Mall, Vancouver, British Columbia, Canada V6T 2A3). *Journal of Computational Physics;* **72**: No. 1, 70-77(Sep 1987).

Presented here is an algorithm tailored to solve the radial Schroedinger equation for the case of proton scattering from an optical potential. The algorithm is straightforward to use and results in a significant increase in speed, around a factor of 2 at least, over the conventional Numerov algorithm. Copyright 1987 Academic Press, Inc.

46701 **Report on the parallel session on high energy nuclear interactions.** Mc Lerran, L. (Fermi National Lab., P.O. Box 500, Batavia, IL 60510). pp 209-229 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The possibility that high energy nuclear collisions may give some new insight into the dynamics of QCD is discussed. Recent experimental data on the EMC is discussed in the perspective of various theoretical models for the effect. The prospects of making and observing a quark-gluon plasma in ultra-relativistic nuclear collisions is reviewed. The status of experimental programs at CERN and at BNL is assessed.

46702 **REview of double beta decay experiments.** Caldwell, D.O. (Physics Dept., Univ. of California, Santa Barbara, CA 93106). pp 951-959 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The search for neutrinoless double beta decay is seeking the physics beyond the standard model. While there is as yet no evidence for a positive effect, the lifetime limit (now 4.7x10/sup 23/ yrs) provides important constraints on theories in the form of the best limits on, lepton number nonconservation, the effective mass of a light Majorana electron neutrino, the existence of right-handed currents for the conditions in which the "see-saw" mechanism provides neutrino mass, the mass of a heavy Majorana neutrino as a function of its coupling to the electron neutrino, the coupling of a Majoron to the electron neutrino, and the μ/sup —/ squark mass as a function of gaugino mass. Experiments are taking data in 7 countries, and in addition progress is being made on two-neutrino double beta decay, which is important for deducing the interesting physics parameters from the neutrinoless decay. Current limits and their interpretation are presented below.

46703 **Theory of double beta decay.** Vogel, P. (Physics Dept., California Institute of Technology, Pasadena, CA 91125). pp 942-944 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

The nuclear matrix elements for 2ν double beta decay is calculated. It is shown that the decay matrix element passes through zero as a function of the coupling constant, g/sup pp/, of the particle-particle component of the spin-isospin polarization force, neglected previously. The analysis of EC/β/sup +/ decay rates for semi-magic nuclei suggests values for g/sup pp/ in the very vicinity of this zero, thereby yielding long lifetimes and providing a possible resolution of the longstanding discrepancy between calculated and measured 2ν double beta decay rates.

46704 **Relativistic effects in nuclear physics.** Brown, G.E. (Department of Physics, State University of New York at Stony Brook, Stony Brook, New York 11794). *AIP (American Institute of Physics) Conference Proceedings;* **142**: No. 1, 2-26(15 Jun 1986). (CONF-8510137—).

From International workshop on nuclear structure at high spin, high excitation, and high momentum transfer; Spencer, IN, USA (21 Oct 1985).

Relativistic corrections to the nonrelativistic nuclear many-body problem are treated in perturbation theory, beginning from a zero-order wave function in which nucleons are in positive energy states in a plane-wave representation. Corrections arise from virtual pairs. Two important relativistic effects arise: (1) A repulsive term in the energy per particle (δepsilon-c-bar)/sub rel/ = 2.4(/sub rho//rho$_0$)/sup 8/3/ MeV, where rho$_0$ is nuclear matter density, comes from the virtual pair terms. This term can equivalently be viewed as coming from a density-dependent correction to the mass of the exchanged scalar boson. (2) The nucleon-nucleon spin-orbit interaction is modified. Effectively, the nucleon mass which enters into this interaction is changed locally by scalar fields which connect to virtual pair states.

46705 **Effects of meson exchange currents, unbound wave functions, and knockout exchange amplitudes on the extraction of particle-hole strengths for 1h-dash-barω stretched states.** Lindgren, R.A.; Leuschner, M.; Clausen, B.L.; Peterson, R.J.; Plum, M.A.; Petrovich, F. (University of Virginia, Charlottesville, VA 22901). *AIP (American Institute of Physics) Conference Proceedings;* **142**: No. 1, 133-154(15 Jun 1986). (CONF-8510137—).

From International workshop on nuclear structure at high spin, high excitation, and high momentum transfer; Spencer, IN, USA (21 Oct 1985).

It is well known that the strength for excitations of 1h-dash-barω high spin, stretched states observed via inelastic scattering is generally much smaller than that predicted by spherical shell model calculations. In addition, results obtained from electromagnetic and hadronic studies have discrepancies at the 20% level. To gain a better understanding of reduced magnetic strength in electron scattering and hopefully close the gap between experiment and theory, calculations of the electron scattering form factors have been performed including the effects due to meson exchange currents in the transition amplitude and the effects due to unbound wave functions for the valence nucleon. The effect of the meson exchange current contributions is to uniformly enhance the form factors near the first maximum resulting in a 16 to 20% further reduction of the stretched particle-hole strength. The effect due to the radial wave functions deduced from Woods-Saxon potentials in which the nucleon is not bound is to reduce the form factors, thereby resulting in an increase in the spectroscopic strength. In regard to the comparison of results obtained with electromagnetic and hadronic probes, the implied sensitivity to higher order current and spin-current transition densities associated with the non-locality due to the tensor knockout exchange amplitudes in nucleon-nucleus scattering is considered explicitly. It is found that the simplest correspondence between electron and nucleon-nucleus scattering is preserved for isovector excitations but not for isoscalar excitations under the usual assumptions for the tensor interaction. It is clear that precise comparisons between experiment and theory (or between probes) cannot be made unless these and related effects are consistently included.

From International school of radiation damage and protection; Sicily, Italy (24 Sep 1987).

Results are presented for a great variety of applications of the member codes of the Integrated TIGER Series (ITS), a system of coupled electron/photon Monte Carlo transport codes. These applications range from the predictions of basic transport phenomena that involve relatively simple geometries and can be compared with precise experimental data to design calculations and analyses for describing transport in geometrically complex research facilities and experiments that often combine strongly competing effects of collisional and macroscopic field transport. The scope of these applications demonstrates the accuracy and flexibility of the system. 46 refs.

In Contributions to radiochemistry. Mathematical problems in modelling.

The article proves the density function property of the modified correlation function for two weakly deformed Gaussian peaks by integration. This density function property allows the calculation of peak shape parameters from multi-channel spectra using the higher moments.

46709 **Multigroup particle transport in a moving material.** Wienke, B.R.; Hill, T.R.; Whalen, P.P. (Applied Theoretical Physics Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Computational Physics;* **72**: No. 1, 177-201(Sep 1987).

The linear Boltzmann equation is formulated against a moving material background in both Eulerian and Lagrangian representations. One-dimensional slab and spherical geometries and two-dimensional cylindrical geometry are treated. Material acceleration terms are expanded locally, effective cross sections and moving sources are defined, and the continuity equation is coupled to the transport equation in a consistent manner. Relative importances of material motion terms are discussed and a simple approximation to the material acceleration term is suggested. Standard multigroup representations for the material motion terms are obtained and an iteration strategy used to solve the transport equation is reviewed. Specific applications are presented and contrasted. copyright 1987 Academic Press, Inc.

46710 (BNL—39931) Variation in thyroid calibration efficiencies as a function of phantom design for I-125. Miltenberger, R.P.; Langille, E.; Sheetz, M.; Ricci, T. (Brookhaven National Lab., Upton, NY (USA); Niagara Mohawk Power Corp., Scriba, NY (USA); Pittsburgh Univ., PA (USA); Saint Paul Medical Center, Dallas, TX (USA). Dept. of Radiation Oncology). 1987. Contract AC02-76CH00016. 19p. (CONF-870705—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014294.

From Annual meeting of the Health Physics Society; Salt Lake City, UT, USA (5 Jul 1987).

Four commercially available thyroid phantoms were evaluated to determine the effect that choice of phantom would have on the determination of I-125 activity in the thyroid. Efficiency calibration values for a 5.0-cm diameter 1-mm thick NaI (Tl) detector were determined as a function of distance from the phantom along the central axis and at angles up to 45 off axis using I-125 as the radionuclide of interest. Results indicate that substantial variations in the estimate of radioactivity in the thyroid will occur based on choice of calibration phantom. Using the Humanoid System, Inc. Realistic Phantom as the reference phantom, one could experience differences in estimated activity in the human thyroid that range from 0.86 to 2.94. 6 refs., 6 figs., 3 tabs.

From 2. specialist research meeting on measurements of short-lived isotopes; Kumatori, Japan (4 Feb 1986).

It has been nearly 15 years since the authors developed the BOB analysis code series for automatic γ-ray spectrometry. A key problem still remaining is how to incorporate calibration processes for energy and couting efficiency. /sup 152/Eu was selected as the multiple γ-ray source for Ge(Li) calibration. Recently it has been desired to estimate the sum effect which occurs when measurements are made near the detector and to determine the limit of the geometry within which /sup 152/Eu is effective as a standard source. The present study is aimed at determining: 1) the reliability of each γ-ray (including the accuracy of the γ-ray emission probability values currently used and the reproducibility in actual measurement), 2) the suitability as standard γ-rays and the likeliness to be affected by the sum effect, 3) in what form the sum effect appears (quantitative examination of the sum effect produced), 4) whether /sup 152/Eu serves as a standard source for large geometries, and 5) whether the sum effect can be corrected easily. Accurate counting efficiency curves are obtained by applying various standard sources to geometries where the sum effect can be ignored. It is found that some γ-rays from /sup 152/Eu are easily affected by the sum effect while others are not. Quantitative consideration is made to provide theoretical equations for correction of the sum effect. It is also shown that the problem of the correction for large geometries may be solved if the dependence of the photopeak counting efficiency on the geometry is known as a function of energy alone. (Nogami, K.).

46714 (ORNL/TM—8381/V1) Specific absorbed fractions of energy at various ages from internal photon sources: 1, Methods. Cristy, M.; Eckerman, K.F. (Oak Ridge National Lab., TN (USA)). Apr 1987. Contract AC05-84OR21400. 112p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87013345.

Specific absorbed fractions (PHI's) in various organs of the body (target organs) from sources of monoenergetic photons in various other organs (source organs) are tabulated. This volume outlines various methods used to compute the PHI-values and describes how the "best" estimates recommended by us are chosen. These PHI-values can be used in calculating the photon component of the dose-equivalent rate in a given target organ from a given radionuclide that is present in a given source organ. The International Commission on Radiological Protection recognizes that the endosteal, or bone surface, cells are the tissue at risk for bone cancer. We have applied the dosimetry methods that Spiers and co-workers developed for beta-emitting radionuclides deposited in bone to follow the transport of secondary electrons that were freed by photon interactions through the microscopic structure of the skeleton. With these methods we can estimate PHI in the endosteal cells and can better estimate PHI in the active marrow; the latter is overestimated with the methods at photon energies below 200 keV. 41 refs., 25 figs., 23 tabs.

46715 (ORNL/TM—8381/V2) Specific absorbed fractions of energy at various ages from internal photon sources: 2, One-year-old. Cristy, M.; Eckerman, K.F. (Oak Ridge National Lab., TN (USA)). Apr 1987. Contract AC05-84OR21400. 46p. NTIS, PC E03/MF A01; 1; GPO Dep. File Number DE87013346.

Specific absorbed fractions (PHI's) in various organs of the body (targets organs) from sources of monoenergetic photons in various other organs (source organs) are tabulated. In this volume PHI-values are tabulated for a one-year old or 9.8-kg person. These PHI-values can be used in calculating the photon component of the dose-equivalent rate in a given target organ from a given radionuclide that is present in a given source organ. The International Commission of Radiological Protection recognizes that the endosteal or bone surface, cells are the tissue at risk for bone cancer. We have applied the dosimetry methods that Spiers and co-workers developed for beta-emitting radionuclides deposited in bone to follow the transport of secondary electrons that were freed by photon interactions through the microscopic structure of the skeleton. With these methods we can estimate PHI in the endosteal cells and can better estimate PHI in the active marrow; the latter is overestimated with other methods at photon energies below 200 keV. 12 refs., 2 tabs.

46716 (ORNL/TM—8381/V3) Specific absorbed fractions of energy at various ages from internal photon sources: 3, Five-year-old. Cristy, M.; Eckerman, K.F. (Oak Ridge National Lab., TN (USA)). Apr 1987. Contract AC05-84OR21400. 46p. NTIS, PC E03/MF A01; 1; GPO Dep. File Number DE87013347.

Specific absorbed fractions (PHI's) in various organs of the body (target organs) from sources of monoenergetic photons in various other organs (source organs) are tabulated. In this volume PHI-values are tabulated for a five-year-old or 19-kg person. These PHI-values can be used in calculating the photon component of the dose-equivalent rate in a given target organ from a given radionuclide that is present in a given source organ. The International Commission on Radiological Protection recognizes that the endosteal, or bone surface, cells are the tissue at risk for bone cancer. We have applied the dosimetry methods developed for beta-emitting radionuclides deposited in bone to follow the transport of secondary electrons that were freed by photon interactions through the microscopic structure of the skeleton. With these methods we can esti-

mate PHI in the endosteal cells and can better estimate PHI in the active marrow; the latter is overestimated with other methods at photon energies below 200 keV. 12 refs., 2 tabs.

46717 **(ORNL/TM—8381/V4) Specific absorbed fractions of energy at various ages from internal photon sources: 4, Ten-year-old.** Cristy, M.; Eckerman, K.F. (Oak Ridge National Lab., TN (USA)). Apr 1987. Contract AC05-84OR21400. 47p. NTIS, PC E03/MF/A01; 1; GPO Dep. File Number DE87013348.

Specific absorbed fractions (PHI's) in various organs of the body (target organs) from sources of monoenergetic photons in various other organs (source organs) are tabulated. In this volume PHI-values are tabulated for a ten-year-old or 32-kg person. These PHI-values can be used in calculating the photon component of the dose-equivalent rate in a given target organ from a given radionuclide that is present in a given source organ. The International Commission on Radiological Protection recognizes that the endosteal, or bone surface, cells are the tissue at risk for bone cancer. 46721 **(PB—87-206793/XAB) Federal radiation protection guidance for occupational exposure: response to comments.** (Office of Radiation Programs, Washington, DC (USA)). Jan 1986. 201p. (EPA—520/1-84/011). NTIS, PC A10/MF A01.

The U.S. Environment Protection Agency responds in the report to comments received on proposed Federal radiation-protection guidance for occupational exposure (46 F.R. 7836, January 23, 1981). An attempt was made to include all of the substanive comments received in writing and in public hearings. The Agency's response follows each of the comments.

46722 (SAAS—343, pp 25-34) **Personnel dosimetry in internal radiation exposure by excretory radionuclide measurement.** Balonov, M.I.; Bruk, G.Ya.; Korelina, N.F.; Likhtarev, I.A.; Repin, V.S. 1986. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87780162. (CONF-8509389—Pt.3).

From Final conference on scientific-technological cooperation between the MoH of the USSR and the SAAS of the GDR; Tashkent, USSR (2 Sep 1985).

The collaboration with the SAAS resulted in the development of a mathematical method to calculate radiation doses in human tissues attributed to inhaled radionuclides concerning their retention dynamics in the respiratory system and their uptake into the blood as well as the metabolic pathways in the organs. Sanepstations and radiation protection service elaborated nomograms for the determination of the commitment doses in the critical organs based on the radionuclide content of a 24-hours urinalysis without intermediate calculations. Recommendations for the use of the method and the nomograms for various radionuclides (solubility classes D and N with MAAD of 1 and 10 μm) are given in the methodological document: Indirect dosimetry of inhaled radionuclides in workers. A calculation method for the annual dose of internal irradiation in tritium workers is also cited.

46723 **(AD-A—181620/6/XAB) Focused-ion-beam technology and applications.** Melngailis, J. (Massachusetts Inst. of Tech., Cambridge (USA). Research Lab. of Electronics). Apr 1987. 31p. NTIS, PC A03/MF A01.

Pub. in Jnl. of Vacuum Science and Technology B, Vol. 5, No. 2, 469-495 (Mar/Apr 1987).

Ions of keV energies incident on a solid surface produce a number of effects: several atoms are sputtered off, several electrons are emitted, chemical reactions may be induced, atoms are displaced from their equilibrium positions, and ions implant themselves in the solid, altering its properties. Some of these effects, such as

sputtering and implantation are widely used in semiconductor device fabrication and in other fields. Thus, the capability to focus a beam of ions to submicrometer dimensions, i.e., dimensions compatible with the most-demanding fabrication procedures, is an important development. The focused-ion-beam field has been spurred by the invention of the liquid metal ion source and by the utilization of focusing columns with mass-separation capability. This has led to the use of alloy ion sources making available a large menu of ion species, in particular the dopants of silicon and gallium arsenides. The ability to sputter and to also induce deposition by causing breakdown of an adsorbed film has produced an immediate application of focused ion beams to photomask repair.

46724 **(BNL—40024) Neutron scattering study on the magnetic excitations in Mn_3Si.** Tomiyoshi, S.; Yamaguchi, Y.; Ohashi, M.; Cowley, E.R.; Shirane, G. (Brookhaven National Lab., Upton, NY (USA); Tohoku Univ., Sendai (Japan). Research Inst. for Iron, Steel and Other Metals; Rutgers--the State Univ., Camden, NJ (USA). Coll. of Arts and Sciences). 1987. Contract AC02-76CH00016. 9p. (CONF-8704171—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013305.

From International symposium on magnetism of intermetallic compounds; Kyoto, Japan (20 Apr 1987).

Magnetic excitations in an itinerant antiferromagnet Mn_3Si were measured up to an energy of 7 kT/sub N/ (15 MeV) at 5.5 K by inelastic scattering of neutrons. The dispersion cones emanating from a pair of magnetic satellite Bragg points intersect at 5 MeV and after that they combine into anisotropic excitations centered at a Brillouin zone boundary.

(Brookhaven National Lab., Upton, NY (USA); Laboratoire Leon Brillouin, Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). 1987. Contract AC02-76CH00016. 13p. (CONF-8705168—1). NTIS, PC A02. File Number DE87013316.

From Workshop on competing interactions and microstructures: statics and dynamics; Los Alamos, NM, USA (5 May 1987).

This paper discusses neutron and x-ray investigations of some metallic alloys which are known to exhibit martensitic transformations. It is shown that precursor effects are usually present in the diffuse scattering and in the phonon dispersion curves, but the transition cannot be described in terms of the soft mode picture used in the Landau and Devonshire theory to describe structural phase transitions. In addition, it is noted that it is inappropriate to look at these microstructures as incommensurate systems, but more correctly as a coherent coexistence of two phases.

46726 **(CONF-870733—10) EXELFS [Extended Electron Energy Loss Fine Structure] of amorphous and crystalline SiC.** Angelini, P.; Sevely, J.C.; Hssein, K.; Zanchi, G. (Oak Ridge National Lab., TN (USA); Centre National de la Recherche Scientifique, 31 - Toulouse (France). Lab. d'Optique Electronique). Jul 1987. Contract AC05-84OR21400. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013551.

From Pacific workshop and meeting on analytical electron microscopy; Kona, HI, USA (12 Jul 1987).

Extended Electron Energy Loss Fine Structure (EXELFS) is a technique which is sensitive to the local atomic environment surrounding atoms. The ability to perform EXELFS measurements with the use of an electron microscope enables one to study materials properties at high spatial resolution. Its use as a method to evaluate amorphous materials is especially noteworthy since EXELFS is sensitive to the structure and composition within near neighbor distances of specific types of atoms. The materials used in this study included single crystal SiC, single crystal SiC made amorphous by ion implantation with chromium, and single crystal SiC made amorphous under a converged 300 kV electron beam. EXELFS results, based upon the Si K edge, exhibit significant differences for crystalline SiC versus the SiC made amorphous by ion implantation. The position of peaks in the radial distribution function (RDF), representing the Si-C and the Si-Si interatomic bonds, indicate an expansion in the nearest neighbor distances for the ion implanted amorphous SiC. Also the Si-Si/Si-C peak intensity ratio for the amorphous material was significantly lower than that for crystalline SiC. These results imply that the tetrahedral (Si-C) bonds are retained to a greater degree than the longer Si-Si bonds. A loss in coordination of the Si-Si bond indicates that the unit cell has undergone substantial damage.

46727 **(CONF-8708110—3) Plasmon resonance absorption in layered structures of silver with periodic corrugation.** Arakawa, E.T.; Inagaki, T.; Goudonnet, J.P. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87013183.

From 31. SPIE annual international technical symposium on optical and optoelectronic applied science and engineering; San Diego, CA, USA (16 Aug 1987).

Plasmon resonance absorption in periodically corrugated layered structures of silver was studied by the photoacoustic method. The layered structures were self-supporting and corrugated with a period of 1888 nm and amplitude varying from 6 to 12 nm, depending on the thickness. Experimental results of resonance absorption of 633-nm photons were analyzed in terms of the propagation and damping constants of coupled modes of surface plasmons. The coupling efficiency of incident photons to these modes was found to be strongly dependent on corrugation amplitude and layer thickness.

46728 **(CONF-8708117—1) SANS [small-angle neutron scattering] from polymers and colloids.** Hayter, J.B. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013548.

From Neutron scattering symposium on advances and applications; Sydney, Australia (8 Aug 1987).

Small-angle neutron scattering (SANS) has been remarkably successful in providing detailed quantitative structural information on complex everyday materials, such as polymers and colloids, which are often of considerable industrial as well as academic interest. This paper reviews some recent SANS experiments on polymers and colloids, including ferrofluids, and discusses the use of these apparently complex systems as general physical models of the liquid or solid state.

46729 **(CONF-8709116—3) Comparison of fractal and pore models for electrolyte/electrode interfaces.** Wang, J.C. (Oak Ridge National Lab., TN (USA)). Jul 1987. Contract AC05-84OR21400. 19p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013681.

From 6. international conference on solid state ionics; Garmisch-Partenkirchen, F.R. Germany (6 Sep 1987).

Fractal and pore models connecting the fractional-power frequency dependence of the impedance of an electrolyte/blocking electrode interface to the interface microstructure are compared. It is demonstrated that Liu's fractal model is similar to a pore model because of the way the fractal interface is constructed; the validity of the relation between the fractal dimension D and the impedance frequency exponent n derived by Liu depends crucially on the way the fractal dimension is defined; and the relation between D and n derived by Nyikos and Pajkossy is questionable because the assumption that their fractal interfaces have a fractional-power-law impedance is inconsistent with our numerical results.

46730 **(DOE/ER/45233—2) Application of spin-sensitive electron spectroscopies to investigations of electronic and magnetic properties of solid surfaces and epitaxial systems: Progress report, 1 January 1987-31 December 1987.** Walters, G.K.; Dunning, F.B. (Rice Univ., Houston, TX (USA)). Aug 1987. Contract FG05-86ER45233. 7p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87014235.

Research during the second year of this grant has focussed on: (1) investigation of surface magnetic structure of Ni(lll) by Spin-Polarized Low Energy Electron Diffraction (SPLEED) and overhaul of the apparatus to incorporate additional spin-dependent electron spectroscopies and epitaxial growth capabilities; and (2) investigation of dynamics of metastable atom deexcitation at magnetic and adsorbate-covered surfaces using Spin-Polarized Metastable Deexcitation Spectroscopy (SPMDS).

46731 **(IC—86/310) H/sub g/Te-CdTe phase diagrams calculation by RAS model.** Hady, A.A.A. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703062.

The model of Regular Associated Solutions (RAS) for binary solution, which extended onto the ternary solution was used for Mercury-Cadnium-Tellurim phase diagrams calculations. The function of dissociation parameters is used here as a function of temperature and it is independent of composition. The ratio of mole fractions has a weak dependence on temperature and is not neglected. The calculated liquidus binary temperature and the experimental one are so fitted to give the best values of parameters used to calculate the HgTe-CdTe phase diagrams. 15 refs, 5 figs, 2 tabs.

46732 **(IC—86/314) Inertial transient dynamics of the sliding charge density wave systems.** Dong Jinming; Yu Lu. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1986. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703065.

The singular perturbation method is used in this note to study the effects of the inertial term in the single particle model for the charge density wave systems mainly in the sliding regime. The inertial term leads to the "ringing" phenomena when a pulse field is applied. The theoretical results are qualitatively consistent with the experimental observations. 14 refs, 3 figs.

46733 **(IC—86/374) Anelastic behaviour of materials under multiaxial strains. III: Order-disorder transition, Snoek effect and Poisson's ratio in AISI-1080 steel.** Bolmaro, R.E.; Povolo, F. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703087.

Data on Young's modulus and Poisson's ratio obtained in AISI-1080 steel, in the temperature region between about 300 and 600 K, are presented. The measurements have been performed in longitudinal excitation and several harmonics were used, to obtain Poisson's ratio from the measured resonant frequencies. The maximum observed in the temperature dependence of Young's modulus, for the fundamental resonant frequency, is attributed to a stress-induced disordering of carbon atoms in the octahedral interstices of the martensitic matrix. The increases of Young's modulus with temperature are described in terms of expressions deduced in the paper, which are based on Landau theory of second order phase transitions. The critical temperature is related to the M/sub s/ and M/sub f/ temperatures which characterize the martensitic phase transition. Finally, the temperature dependence of Poisson's ratio is described in terms of a theory of anelastic behaviour under multiaxial strains, based on the standard anelastic solid model. 23 refs, 5 figs, 1 tab.

46734 **(INIS-SU—405) Experimental study of the de Haas-van Alphen effect in the intermetallic compound Cd/sub 3/Mg.** Fenster, M.Ya.; Khotkevich, V.V.; Pluzhnikov, V.B. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst. Nizkikh Temperatur). 1985. 33p. (In Russian). (Preprint-no—17-85). NTIS (US Sales Only), PC A03/MF A01. File Number DE87703108.

De Haas-van Alphen oscillations are observed in the ordered intermetallic compound Cd/sub 3/Mg at 1.5 to 4.2 K in the field up to 70 kG. The detailed description of the experimental technology is given. Methods are discussed for high-accuracy analysis of oscillatory data using the discrete fast Fourier transform. It was found that the Fermi surface of Cd/sub 3/Mg has a complicated form not similar to that of cadmium or magnesium. A comparison of the experimental data with pseudopotential band structure calculations is carried out. 30 refs.; 14 figs.

46735 **(INIS-SU—407) Electronic structure of ordered intermetallic compounds Cd/sub 3/Mg and Mg/sub 3/Cd.** Khotkevich, V.V.; Svechkarev, I.V.; Pluzhnikov, V.B.; Grechnev, G.E. (AN Ukrainskoj SSR, Kharkov. Fiziko-Tekhnicheskij Inst. Nizkikh Temperatur). 1986. 24p. (In Russian). (Preprint-no—22-86). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703110.

The de Haas-van Alphen (DHvA) effect is studied experimentally in the intermetallic compound Cd/sub 3/Mg. More than seven separate dHvA frequency brunches are observed and several effective masses and Dingle temperatures are determined. The band structure calculations based on the semiempirical pseudopotentials are carried out both for Cd/sub 3/Mg and Mg/sub 3/Cd to construct the Fermi surfaces (FS) of these compounds. It is possible to propose the explanation of dHvA frequency brunches in Cd/sub 3/Mg using the calculated angle dependence of FS extremal cross sections. The role of spin-orbit interaction effects in Cd/sub 3/Mg electron band spectrum and FS formation is discussed. 17 refs.; 10 figs.; 2 tabs.

46736 **(LA-UR—87-1910) Complex scattering dynamics and the integer quantum Hall effect.** Trugman, S.A.; Waugh, F.R. (Los Alamos National Lab., NM (USA); Princeton Univ., NJ (USA). Dept. of Physics). 1987. Contract W-7405-ENG-36. 7p. (CONF-870774—1). NTIS, PC A02/MF AO1; 1; GPO Dep. File Number DE87011790.

From 7. electronic properties of two-dimensional systems; Santa Fe, NM, USA (27 Jul 1987).

The effect of a magnetic field on potential scattering is investigated microscopically. A magnetic field renders the scattering of a classical charged particle far more complex than previously suspected. Consequences include possible 1/f noise and an explanation of the observed breakdown of the quantum Hall effect at large currents. A particular scatterer is described by a discontinuous one dimensional Hamiltonian map, a class of maps that has not previously been studied. A renormalization group analysis indicates that singular behavior arises from the interplay of electron orbits that are periodic and orbits that are quasiperiodic.

46737 **(LA-UR—87-2272) Vibrational spectroscopy of shock-compressed fluid N_2 and O_2.** Schmidt, S.C.; Moore, D.S.; Shaw, M.S.; Johnson, J.D. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 5p. (CONF-870753—60). NTIS, PC A02/MF A01; GPO Dep. File Number DE87013138.

From 5. topical conference of the American Physical Society on shockwaves in condensed matter; Monterey, CA, USA (20 Jul 1987).

Single-pulse, multiplex, coherent anti-Stokes Raman scattering (CARS) was used to observe the vibrational spectra of liquid N_2 shock-compressed to several pressures and temperatures up to 41 GPa and 5200 K and liquid O_2 shock-compressed to several pressures and temperatures up to 10 GPa and 1000 K. For N_2, the experimental spectra were compared to synthetic spectra calculated using a semiclassical model for CARS intensities and estimated vibrational frequencies, peak Raman susceptibilities and Raman line widths. The question of excited state populations in the shock-compressed state is addressed.

46738 **(LA-UR—87-2273) Experimental molecular spectroscopy in shock-compressed materials.** Moore, D.S.; Schmidt, S.C. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 10p. (CONF-870753—61). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013139.

From 5. topical conference of the American Physical Society on shockwaves in condensed matter; Monterey, CA, USA (20 Jul 1987).

Shocked materials present an exciting challenge to the experimental spectroscopist. The severe constraints in time and space imposed by the shock process can also be accompanied by chemical complexity. Many standard spectroscopic techniques have recently been adapted with varying degrees of success. Those discussed here are uv/visible absorption, emission, and fluorescence, infrared absorption, and spontaneous and coherent Raman scattering. The importance of the connection to both theory and static high-pressure methods is emphasized.

46739 (LA-UR—87-2283) Rarefaction velocities in shocked lead. Boness, D.A.; Brown, J.M.; Shaner, J.W. (Los Alamos National Lab., NM (USA); Washington Univ., Seattle (USA). Graduate Program in Geophysics). 1987. Contract W-7405-ENG-36. 5p. (CONF-870753—59). NTIS, PC A02. File Number DE87013141.

From 5. topical conference of the American Physical Society on shockwaves in condensed matter; Monterey, CA, USA (20 Jul 1987).

By use of the optical analyzer technique, the bulk sound velocity in shocked lead has been measured at nine points along its Hugoniot in the pressure range 54.5 to 380 GPa. The lowest-pressure points exhibit no sign of solid behavior. The bulk sound velocity is essentially linear with respect to density, and the Gruneisen parameter, γ, fails to follow a constant $p\gamma$ model. Results are consistent with zero-pressure values.

46740 (LBL—22906) Optical second harmonic generation from Langmuir-type molecular monolayers. Berkovic, G.; Rasing, Th.; Shen, Y.R. (Lawrence Berkeley Lab., CA (USA)). Jan 1987. Contract AC03-76SF00098. 8p. (CONF-8708110—7). NTIS, PC A02. File Number DE87014075.

From 31. SPIE annual international technical symposium on optical and optoelectronic applied science and engineering; San Diego, CA, USA (16 Aug 1987).

A single molecular layer is generally sufficient to produce observable optical second harmonic generation (SHG). Furthermore, the selection rules governing this process make the SHG from a single monolayer often stronger than that from the medium supporting the monolayer. We have studied SHG from various Langmuir-type monolayers (i.e., monolayers spread on a water surface) in the following contexts: Study of chemical reactions (e.g., polymerization) and two-dimensional phase transitions in molecular monolayers on water. Development of a new technique to evaluate optical nonlinear coefficients of organic molecules, and their relationship to the molecular structure.

46741 (LBL—23509) High dose uranium ion implantation into silicon. Brown, I.G.; Galvin, J.E.; Yu, K.M. (Lawrence Berkeley Lab., CA (USA)). May 1987. Contract AC03-76SF00098. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013964.

Implantation of uranium ions into silicon to a maximum dose of 6×10^{16} atoms/cm^2, with a maximum concentration of 6×10^{21} atoms/cm^3, has been carried out. This concentration corresponds to 12 at. % of uranium in the silicon host material. The implanted uranium content was measured by Rutherford backscattering and confirmed by a measurement of the alpha-particle activity of the buried uranium layer. The range and straggling of the uranium, and sputtering of the silicon target by uranium, were measured and are compared with theoretical estimates. The implantation was performed at an ion mean energy of 157 keV using a new kind of high current metal ion source.

46742 (LBL—23676) Second-harmonic and sum-frequency generation for surface studies. Hunt, J.H.; Guyot-Sionnest, P.; Shen, Y.R. (Lawrence Berkeley Lab., CA (USA)). Jul 1987. Contract AC03-76SF00098. 7p. (CONF-8706128—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014081.

From 8. international conference on laser spectroscopy; Are, Sweden (22 Jun 1987).

Second harmonic generation (SHG) has now been well established as a versatile surface-sensitive probe. It has been used to study electrochemical processes at electrode surfaces, molecular adsorption and desorption at metal and semiconductor surfaces, orientational phase transition of molecular monolayers on water, surface reconstruction and epitaxial growth, and so on. More recently, it has been employed as a tool to monitor monolayer polymerization and other surface reactions, to probe polar order of molecules at interfaces, and to measure molecular nonlinearity. While most surface techniques are restricted to the solid/vacuum environment, SHG is applicable to nearly all interfaces as long as the interfaces are accessible by light. In addition, SHG has the advantages of being capable of in-situ measurements with high temporal, spatial, and spectral resolutions.

46743 (PSD—87) Proceedings of the European Meeting on Positron Studies of Defects. (Martin-Luther-Universitaet Halle-Wittenberg, Halle (German Democratic Republic); Zentralinstitut fuer Kernforschung, Rossendorf bei Dresden (German Democratic Republic)). 1987. 191p. (CONF-8703162—). NTIS (US Sales Only), PC A09/MF A01. File Number DE87703128.

From European meeting on positron studies of defects; Wernigerode, German D.R. (23 Mar 1987).

The meeting dealt with both theoretical and experimental aspects of positron studies of defects using conventional and novel positron techniques. The subjects are indicated in the following headings: (1) theory of positrons in imperfect solids, (2) vacancies in metals and alloys, (3) dislocation and deformation effects, (4) amorphous alloys and fine-grained materials, (5) phase transitions, (6) precipitation phenomena, (7) gas impurity-defect interaction and irradiation effects, (8) defects in elemental semiconductors, (9) defects in compound semiconductors, (10) slow positron studies of defects, (11) defects in oxides and halides, (12) defects in molecular solids, and (13) advances in experimental techniques and data treatment. Althogether 141 contributions (invited plenary lectures, short lectures, and posters) are presented as titles with abstracts. Most of them are in INIS scope and are processed individually for the database.

46777 (SAND—87-1138C) **Multidimensional elemental analysis with the Sandia nuclear microprobe.** Doyle, B.L. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 11p. (CONF-8709120—1). NTIS, PC A02. File Number DE87014158.

From International symposium on applications of ion beams in materials science; Tokyo, Japan (2 Sep 1987).

It is well known that many of the ion beam analysis techniques such as Rutherford backscattering spectrometry, elastic recoil detection, resonant and nonresonant nuclear reaction analysis can be used to nondestructively obtain concentration depth profiles of elements in solids. When these techniques are combined with the small beam spot capabilities of a scanned nuclear microprobe, sample composition can be determined in up to three dimensions. This paper will review the various procedures used to collect and analyze multidimensional data using the Sandia nuclear microprobe. In addition, examples of how these data are being used in the study of materials will be shown.

46778 (SAND—87-1773C) **Solute segregation to phase interfaces and grain boundaries: Studies by analytical electron microscopy and profile deconvolution.** Romig, A.D. Jr.; Cieslak, M.J. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 21p. (CONF-870733—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87012129.

From Pacific workshop and meeting on analytical electron microscopy; Kona, HI, USA (12 Jul 1987).

Mathematical deconvolution of the observed composition profiles at the interface or boundary with the x-ray generation profile to determine the actual composition profile is a viable procedure for extracting compositional data on a spatial scale smaller than the inherent resolution of thin foil x-ray microanalysis. In sufficiently thin foils, the x-ray generation profile can be calculated with the single scattering model. In thicker foils, the x-ray generation profile can be calculated with Monte Carlo techniques. Explicit deconvolution is, in general, not possible mathematically, but it can be accomplished numerically through iterative convolutions. Convolution of the x-ray generation profile with the assumed actual composition profile allows for direct calculation of the expected composition profile. The convolution procedure using various assumed actual concentration profiles is repeated iteratively until the calculated profile and the observed profile correspond. This paper describes the convolution process and introduces a rapid graphical solution to the problem, compares the convolution process using the single scattering model and Monte Carlo techniques, and discusses the limitations of the deconvolution procedure. This study uses the recently reported data of Ti enrichment at grain boundaries in an Fe-Ni superalloy (Alloy 800).

46779 (SAND—87-2038C) **Photoluminescence studies of GaAs/AlAs superlattices.** Jones, E.D.; Drummond, T.J.; Hjalmarson, H.P.; Schirber, J.E. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 11p. (CONF-8708112—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013817.

From 3. international conference on superlattices, microstructures and microdevices; Chicago, IL, USA (17 Aug 1987).

Low-temperature pressure-dependent photoluminescence measurements on short-period GaAs/AlAs superlattice structures are presented. Measurements show that the lower energy conduction-band states are in the AlAs layers and the highest energy valence-band states are located in the GaAs layers. This result is supported by the following three experimental observations: the observed pressure coefficient for the conduction-band to valence-band transition energy is negative, the magnetic mass of this transition is "heavy", and the band-to-band absorption coefficient appears to be small. These experimental observations are in agreement with predictions of tight-binding calculations.

46780 **(UCRL—95811) "Hot spots": Subnanometer femtosecond energy localization.** Karo, A.M.; Hardy, J.R. (Lawrence Livermore National Lab., CA (USA); Nebraska Univ., Lincoln (USA). Behlen Lab. of Physics). Dec 1986. Contract W-7405-ENG-48. 7p. (CONF-8702103—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87010276.

From 11. international colloquium on dynamics of explosions and reactive systems; Warsaw, Poland (2 Feb 1987).

In a condensed energetic material an understanding of the dynamics and microscopic mechanisms underlying energy transfer between a shock front and various defects is of prime importance for a realistic description of "hot spot" formation and explosives initiation. A wide variety of simulations using the well-established technique of computer molecular dynamics has enabled us to obtain a general and very useful microscopic description of the processes beneath the macroscopic behavior of shocked systems. The calculation of the influence of heterogeneities such as point and line defects, voids, and grain boundaries is made possible by computer codes that can handle totally heterogeneous dynamical systems and track the dynamics of energy concentration and partitioning among the molecular bonds in the defect and the nearby region. One and two-dimensional calculations will be discussed in which the spatial and temporal dependence of the energy flux in a general lattice-defect system is calculated quantitatively as a function of shock strength, initial temperature, and initial parameters defining the lattice and defect.

46781 **(UCRL—95904) Damage resistance and crystal growth of KDP [potassium dihydrogen phosphate].** Cooper, J.F.; Singleton, M.F. (Lawrence Livermore National Lab., CA (USA)). 8 Jan 1987. Contract W-7405-ENG-48. 13p. (CONF-860880—55). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011555.

From 30. SPIE technical symposium on optics and optoelectronic engineering; San Diego, CA, USA (17 Aug 1986).

An investigation is reported of the dependence of laser-damage site density on fluence and on various parameters of crystal growth and post-growth treatment. Damage site density (number of defects per unit volume) was found to increase monotonically with fluence (for single 1-ns pulses of 1.06 μm laser light). Site density (at a fluence of 10 J/cm^2) was influenced by solution flow rate, seed defect removal prior to growth, quaternary ammonium cations, and thermal cycling following growth. No dependence of damage susceptibility on growth rate was found over the range 3 to 30 mm/d. A model is presented which postulates the electrostatic adsorption of organic material onto the growing crystal surface and subsequent inclusion into the crystal. According to the model, damage occurs by absorption of light by inclusions of solution-wetted organic debris, resulting in pressure increase and hydraulic fracture of the surrounding crystal.

46782 **(UCRL—96019) A finite element model for induction heating of a metal crucible.** Gresho, P.M.; Derby, J.J. (Lawrence Livermore National Lab., CA (USA)). Jun 1987. Contract W-7405-ENG-48. 16p. (CONF-870799—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014246.

From American conference on crystal growth; Monterey, CA, USA (13 Jul 1987).

In support of a combined theoretical and experimental program designed to grow large oxide crystals at Lawrence Livermore National Laboratory, we have developed a quantitative model of the induction heating process for the Czochralski crystal growth technique. When integrated into the overall thermo-capillary-hydrodynamic model, this sub-model will provide the driving force for the entire process by describing the spatially-varying heat generation rate in the metal crucible. Herein we present the development of this sub-model and apply it to some typical cases of interest.

46783 **(UCRL—96492) Three phase carbon EOS model with electronic excitation.** van Thiel, M.; Ree, F.H.; Grover, R. (Lawrence Livermore National Lab., CA (USA)). Jul 1987. Contract W-7405-ENG-48. 5p. (CONF-870753—56). NTIS, PC A02. File Number DE87013109.

From 5. topical conference of the American Physical Society on shockwaves in condensed matter; Monterey, CA, USA (20 Jul 1987).

A simple and rapid way for computing EOS data of multiphase solids with a liquid phase is described with emphasis on carbon. The method uses a scaling model for the liquid phase and includes a provision for electronic effects. The free energy minimum determines the stable phase.

46784 **(UCRL—96528) The dissociation of dense liquid nitrogen and shock cooling.** Ross, M. (Lawrence Livermore National Lab., CA (USA)). Jul 1987. Contract W-7405-ENG-48. 6p. (CONF-870753—53). NTIS, PC A02. File Number DE87013490.

From 5. topical conference of the American Physical Society on shockwaves in condensed matter; Monterey, CA, USA (20 Jul 1987).

A theoretical model is used to examine the dissociation of shock-compressed liquid nitrogen. An important feature of the model is the introduction of a binding energy for the atomic state which leads to a volume-dependent dissociation energy. The model correctly predicts the highly unusual feature of shock cooling which is shown to be the consequence of the volume dependent dissociation energy.

46785 **(UCRL—96553) Why linear Birch and U/sub s/-U/sub p/ expansions work.** Grover, R. (Lawrence Livermore National Lab., CA (USA)). Jul 1987. Contract W-7405-ENG-48. 5p. (CONF-870753—49). NTIS, PC A02. File Number DE87013220.

From 5. topical conference of the American Physical Society on shockwaves in condensed matter; Monterey, CA, USA (20 Jul 1987).

The equivalence of the Birch-Murnoghan equation to a linear U/sub s/-U/sub p/ equation was illustrated in the previous paper. Here it is shown in a direct manner how the virial theorem boundary localization of valence electron kinetic energy changes lead to the convergence of the Eulerian strain expansion about the zero-pressure state.

46786 **Dendritic sidebranching in the three-dimensional symmetric model in the presence of noise.** Langer, J.S. (Institute for Theoretical Physics, University of California, Santa Barbara, California 93106). *Physical Review* [*Section*] *A: General Physics;* **36**: No. 7, 3350-3358(1 Oct 1987).

The time-dependent behavior of sidebranching deformations in the three-dimensional symmetric model of dendritic solidification is studied within a WKB approximation. Localized wave packets generated by pulses in the neighborhood of the tip are found to grow in amplitude and to spread and stretch as they move down the sides of the dendrite. This behavior is shown to imply that noise in the solidifying medium is selectively amplified in such a way as to produce a fluctuating train of sidebranches in qualitative agreement with experimental observations. A rough estimate indicates that purely thermal noise is probably not quite strong enough to fit the data.

46787 **Thermoelectric power fluctuations.** Esposito, F.P.; Goodman, B.; Ma, M. (Department of Physics, University of Cincinnati, Cincinnati, Ohio 45221). *Physical Review* [*Section*] *B: Condensed Matter;* **36**: No. 8, 4507-4509(15 Sep 1987).

We consider the fluctuations of the thermoelectric transport coefficients due to quantum interference. At low temperatures the relative fluctuations in these coefficients are substantially enhanced over the relative conductance fluctuations and result in random

sign changes in the coefficients. We suggest a simple experiment to measure these effects for L>L/sub in/.

46788 **Extreme-ultraviolet light emission from 50-MeV H^0 impact on aluminum.** James, D.R.; Sauers, I.; Arakawa, E.T. (Health and Safety Research Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831-6123). *Physical Review [Section] B: Condensed Matter;* **36**: No. 8, 4458-4461(15 Sep 1987). Contract AC05-84OR21400.

The first measurements are reported of extreme-ultraviolet light emission in the range 1.0—110 nm from the surface of an Al foil during bombardment from a 50-MeV atomic hydrogen beam. Beam currents were varied from 7.5 x 10/sup -9/ to 6.5 x 10/sup -4/ particle amps. The integrated photon yield was found to be 0.04—0.4 photons per incident atom and is discussed in terms of different emission mechanisms.

46789 **Self-energy shifts in heavily doped, polar semiconductors.** Sernelius, B.E. (Solid State Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] B: Condensed Matter;* **36**: No. 9, 4878-4887(15 Sep 1987). Contract AC05-84OR21400.

We present theoretical results for the self-energy shifts due to the interactions in a heavily doped, polar semiconductor. For the purpose of numerical demonstration we apply the results to n-type CdS. The density of states for both the majority and minority carriers are calculated in the region near the band edges. The polar coupling modifies the self-energy shifts, and new structures appear in the density of states, both above and below the Fermi level. At least some traces of these structures should be observed in experiments. Furthermore, the doping-induced band-gap narrowing is determined and we compare the obtained results with those from the much simpler so-called ϵ_0 approximation.

46790 **Functionals of the ground-state energy and the band gaps of semiconductors and insulators.** Rasolt, M. (Solid State Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] B: Condensed Matter;* **36**: No. 9, 5041-5043(15 Sep 1987). Contract AC05-84OR21400.

We argue that the functional density for the energy of a semiconductor is nonanalytic in the density. Formal expansions in powers of the density, which are at the core of the local-density and gradient-expansion approximations, cannot be rigorously valid for macroscopic systems with energy gaps in the excitation spectrum.

46791 **Dipole radiation in a multilayer geometry.** Reed, C.E.; Giergiel, J.; Hemminger, J.C.; Ushioda, S. (Department of Physics, School of Physical Sciences, University of California, Irvine, California 92717). *Physical Review [Section] B: Condensed Matter;* **36**: No. 9, 4990-5000(15 Sep 1987).

There are several kinds of experiments that can be done with multilayer stacks of dielectric media which require an understanding of light emission by sources within the stack for their analysis. These experiments may involve, for example, light-emitting tunnel junctions, Raman scattering in Kretschmann and other multilayered geometries, and Rayleigh scattering by small amounts of surface or interface roughness, either alone or in combination with other processes. A set of electromagnetic Green's functions for a multilayer stack of isotropic dielectric media [D. L. Mills and A. A. Maradudin, Phys. Rev. B 12, 2943 (1975)] gives the electric fields produced everywhere by a point source of current oscillating at a frequency f. These Green's functions can thus be used to solve this type of problem. In this paper we show how these Green's functions can be written in terms of 2 x 2 transfer matrices of the type commonly used to find the fields in a dielectric stack due to an incident plane wave. With this simplification we can easily evaluate the Green's functions for a stack with an arbitrary number of layers. We further show that, when the electric fields generated by a point source within the stack are evaluated far away, they can be written directly in terms of the electric fields that would be generated at the location of the current source by plane waves incident from the direction of the observation point. We show that this follows from the Lorentz reciprocity theorem. Thus, in this case the formalism of Green's functions is not needed.

46792 **Calculation of specific heat and susceptibilities with the use of the Trotter approximation.** Fye, R.M.; Scalettar, R.T. (Department of Physics, University of California, San Diego, La Jolla, California 92093). *Physical Review [Section] B: Condensed Matter;* **36**: No. 7, 3833-3843(1 Sep 1987).

The Trotter approximation has been used extensively in quantum Monte Carlo simulations. We consider here different ways of calculating the general zero-field susceptibility chi and the specific heat C when a Trotter approximation is used, deriving analytically the error dependence on the imaginary-time increment Δtau as well as the low-temperature behavior. We find that certain definitions of chi and C exhibit spurious divergences at low temperatures, and suggest the most appropriate ways to extract these quantities. We test our general predictions on two models, and discuss the implications of our results for numerical simulations.

46793 **Neutron-scattering observations of extreme critical slowing down in a d = 3 random-field system.** Belanger, D.P.; Jaccarino, V.; King, A.R.; Nicklow, R.M. (Department of Physics, University of California, Santa Cruz, California 95064). *Physical Review Letters;* **59**: No. 8, 930-933(24 Aug 1987).

Extreme critical slowing down of the order-parameter fluctuations in a d = 3 random-field Ising model system is observed in quasielastic-neutron-scattering studies of Fe/sub 0.46/Zn/sub 0.54/F_2. This is manifest in the logarithmic time dependence of I(q) in the 30—10^4-sec time domain at, and near, T/sub c/(H) in zero-field—cooled measurements. Contrary to a report by others, T/sub eq/(H)>T/sub c/(H) and no evidence for a first-order phase transition is found in this virtually gradient-free crystal.

46794 **Accurate estimate of ν for the three-dimensional Ising model from a numerical measurement of its partition function.** Bhanot, G.; Salvador, R.; Black, S.; Carter, P.; Toral, R. (Physics Department and Supercomputer Computations Research Institute, The Florida State University, Tallahassee, Florida 32306). *Physical Review Letters;* **59**: No. 7, 803-806(17 Aug 1987).

We give results from an accurate determination of the partition function of the three-dimensional Ising model on lattices of size up to 10^3. We compute the two complex zeros of Z closest to the real temperature axis. From a finite-size scaling analysis of these, we get the estimates $\nu = 0.6295(10)$ for the correlation-length exponent and phi = 52.2(7) for the angle between the first two zeros and the real u = e/sup -4//sup β/ axis.

46795 **Integral quantum Hall effect for nonspecialists.** Yennie, D.R. (Laboratory of Nuclear Studies, Cornell University, Ithaca, New York 14853, Institute for Theoretical Physics, University of California, Santa Barbara, California 93106 and Stanford Linear Accelerator Center, Stanford, California 94305). *Reviews of Modern Physics;* **59**: No. 3, 781-824(Jul 1987).

An attempt is made to develop a description of the multielectron quantum state responsible for the integral quantum Hall effect. One goal is to provide intuitive support for the very powerful and general argument of Laughlin that the theoretical relationship is insensitive to complicating details in the interior of the sample. The model the author uses is somewhat more realistic than heretofore in that it is three dimensional, does not ignore the atomic structure of the bulk matter, and does not use an effective-mass approximation. In order to treat the problem quantum mechanically, the complete system, including circuitry external to the system of interest, is replaced by a model closed system consisting of a finite number of electrons. In this model, states with a finite Hall current and voltage are metastable against decay caused by interactions outside the model, such as those with bulk matter excitations. Such states describe the true situation well only in the conductivity plateaus; between plateaus, there would be current flow between the Hall voltage probes corresponding to decaying states. Experimental constraints replace this transverse current by a voltage drop along the direction of current flow. The interactions between the electrons are expressed in terms of a self-consistent potential which gives an independent-particle description as a starting point, and residual interactions which are treated by perturbation

theory. The self-consistent potential is found to be important in understanding the properties of the quantum state of the system, such as the existence of the plateaus in conductivity and how the electrons in the (effective) two-dimensional region come to equilibrium with the different Fermi levels in the voltage probes.

46796 **Microdiffraction with synchrotron radiation.** Ice, G.E. (Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 397-399(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

Storage ring sources are orders of magnitude brighter than the characteristic line of a rotating anode X-ray tube. This improved brightness allows X-ray diffraction with micron spatial resolution. We report on priliminary microdiffraction experiments using synchrotron radiation. In these experiments, synchrotron radiation beams were passed through specially prepared heavy metal pinholes to achieve probes as small as 10 μm. Both white beam and monochromatic beam techniques are discussed and the ralative merits are compared.

46797 **Dynamical image charge effects on convoy electron emission from solid surfaces.** Burgdoerfer, J. (Tennessee Univ., Knoxville; Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 139-142(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

We analyze surface effects on the spectrum of convoy electrons emitted from solids in close association with fast highly chargerd ions. Three competing mechanisms have been identified: Deceleration by the surface barrier, acceleration by the repulsive dynamical image force, and energy loss due to surface plasmon generation. The resulting energy shift is significantly reduced compard to the value for the barrier height for a jellium surface. We also give estimates for the probability for nonadiabatic transitions between bound states due to the sudden perturbation by the potential step upon exit.

46798 **Exit charge state dependence of convoy electron production in heavy-ion-solid collisions.** Huelskoetter, H.P.; Burgdoerfer, J.; Sellin, I.A. (Tennessee Univ., Knoxville; Oak Ridge National Lab., TN). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 147-152(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

The dependence of the yield of convoy electrons emitted near the forward direction in collision involving fast ions and thin solid targets on the emergent projectile charge state is presented and described in terms of primary electron loss events in the solid. The data include a large array of projectiles, projectile energies and charge states, as well as targets ranging in thickness from the nonequilibrium well into the equilibrium thickness region. The description presented in constent with other experiment and theoretical results indicating that the convoy electron production is closely linked to the ELC process observed in binary ion-atom collisions, with the dominant contribution to the convoy yield stemming from excited states of the projectile.

46799 **Recent measurements of coherent transition radiation.** Moran, M.J. (Lawrence Livermore National Lab., CA). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 335-338(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

An extended series of experiments has been used to investigate transition radiation in the X-ray spectral region. The X-rays were generated at the Lawrence Livermore National Laboratory electron-positron linear accelerator by 54 MeV electrons traversing multiple thin-foil targets. The measured angular and spectral distributions have shown excellent agreement with calculated predicitions based on a simplified theoretical description of transition radiation. Recently, energy-resolved measurements of X-ray generation by targets consisting of multiple closely-spaced foils has clearly demonstrated the longitudinal coherence of transition radiation. This behavior might lead to a variety of applications such as tuneable narrow-band X-ray sources, measurement of X-ray dielectric constants, or particle beam diagnostics. These issues will be discussed and recent results will be presented.

46800 **Preparation and characterization of Langmuir and Langmuir Blodgett films.** Ketteerson, J.B.; Dutta, P. (Northwestern Univ., Evanston, IL). *Applied Physics Communications;* **7**: No. 1-2, 95(Mar-Jun 1987). Contract FG02-84ER45125.

Although monolayer Langmuir films at the air/water interface and multilayer Langmuir-Blodgett films deposited on various substrates have a time honored history, it is only recently that significant progress has been made in characterizing their structure. They will report on recent conventional and synchrotron x-ray studies, both at Northwestern University and elsewhere, on Langmuir and Langmuir Blodgett films. In particular the first in plane Langmuir Blodgett and monolayer Langmuir diffraction data have been obtained. Other experiments involving the elastic, and visco elastic response of Langmuir films, and the growth characteristics of Langmuir Blodgett multilayer films will also be discussed.

46801 **Electronic structure calculation of amorphous solid.** Ching, W.Y. (Univ. of Missouri, Kansas City). *Applied Physics Communications;* **7**: No. 1-2, 111(Mar-Jun 1987). Contract FG02-84ER45170.

Recent results on the successful application of first-principles method to the calculation of electronic structure of amorphous solids will be reviewed. The systems to be discussed include amorphous semiconductors, insulating glasses, metallic glasses and alloys of high structural complexity. Emphasis will be on the relationship between the atomic-scale short-range order in the structure and the local density of states of individual atom, and the characterization of localized/delocalized nature of electron states across the entire energy range in various amorphous solids.

46802 **Supercell total energy approach to transition metal alloy pair interactions.** Carlsson, A.E. (Washington Univ., St. Louis, MO). *Applied Physics Communications;* **7**: No. 1-2, 113(Mar-Jun 1987). Contract FG02-84ER45130.

A new method is described for obtaining effective pair interactions (EPI) in transition metal alloys from density-functional theory total energy calculations for supercell compounds. The calculated total energies are used to obtain explicit concentration-independent cluster interactions, through an inversion scheme. Using a truncated form for the higher-order interatomic correlation functions, the cluster interactions are resummed into concentration-dependent EPI. This method offers a treatment of electron-electron interactions that is more accurate than in existing methods such as the Generalized Perturbation Theory (GPT), although the long-ranged oscillations in the EPI are much more difficult to obtain. Furthermore, the method can be used with density-functional calculation which supersede the muffintin approximation, and can thus treat open crystal structures correctly. Results will be presented for Al-transition metal alloys, including Ni-Al. In Ni-Al the EPI is strongly concentration-dependent, with the ordering tendency much stronger at the Ni-rich end. The elastic strain energy contributes significantly to the EPI. The behavior of the EPI oscillates rapidly as a function of the transition metal d-band filling.

46803 **Resolution analyses for Moessbauer diffraction: resolved TDS profiles in silicon.** Crow, M.L.; Schupp, G.; Yelon, W.B.; Mullen, J.G.; Djedid, A. (Univ. of Missouri, Columbia). *Applied Physics Communications;* **7**: No. 1-2, 120(Mar-Jun 1987). Contract FG02-85ER45199;FG02-85ER45200.

The thermal diffuse scattering near the 444 reflection in silicon has been studied using high intensity Moessbauer radiation from the 46.68 keV transition in ^{183}W. The improvement in momentum resolution over earlier Moessbauer scattering studies has allowed observation of the directional dependence of the thermal

diffuse scattering. These measurements have given motivation for the first resolution function analyses appropriate for the Moessbauer diffraction. The measured momentum resolution half widths were 0.011 A^{-1} and 0.11 A^{-1} in the transverse and longitudinal directions, and the vertical resolution was 1.13 A^{-1}. The broad distribution of inelastic scattering seen is in agreement with calculations based on elastic constants and the resolution function analyses.

From NATO ASI meeting on organic and inorganic low dimensional crystalline materials; Minorca-Beleares, Spain (3 May 1987).

Two topics are discussed: (1) the competition between 2k/sub F/ and 4k/sub F/ charge state waves in a one-dimensional electron gas and (2) a two-dimensional model of high T/sub c/ superconductivity in the oxides. (LSP)

46805 (IS-T—1218) Abrikosov vortex motion and elementary pinning force in a SNS [Superconductor-Normal metal-Superconductor] Josephson junction. Hyun, O.B. (Ames Lab., IA (USA)). Aug 1987. Contract W-7405-ENG-82. 169p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE87013607.

Procedures have been developed to determine the location of a single Abrikosov vortex in a Superconductor-Normal metal-Superconductor (SNS) Josephson junction and study its motion under the influence of a Lorentz force. A vortex in a SNS junction generates characteristic magnetic field inside the junction and this field, in turn, induces a specified phase across the junction. This phase caused by the vortex changes the critical current characteristics of the junction, that then can be used to locate the vortex inside the junction. A single vortex was successfully trapped in the junction by the field cooling process and the location was determined by the diffraction pattern. Motion of the vortex was induced by the transport current, I/sub p/, and the vortex was found to move in discrete jumps. By tracing the vortex after successive depinning events, many pinning centers could be identified. From the minimum depinning current, the elementary pinning force associated with an individual pinning site of the Pb-Bi (4 at. %) superconducting layer has been measured and found to be of order of 10^{-8} dyne (or 10^{-4} dyne/cm) at T/T/sub c/ = 0.95. The force is asymmetric and different from one pinning site to another. For the given SNS junction, the pinning force of a pinning center is dominant over all other forces associated with the vortex in the junction. In addition, from the experiment the temperature dependence of the pinning force is found to be f/sub p/ ~ (1 - T/T/sub c/)/sup 3/2/ near T/sub c/. There are two ingredients for the vortex depinning experiment. First, the N layer of the junction must be thick to reduce the field energy and dipole coupling force of the vortex. Secondly, vortex can be depinned at higher temperatures, at which depinning current is smaller than vortex nucleation current.

46806 (LA-UR—87-2537) On the rf surface resistance of the perovskite superconductors at 3 GHz. Hein, M.; Klein, N.; Mueller, F.M.; Mueller, G.; Piel, H.; Roeth, R.W.; Weingarten, W.; Willis, J.O. (Los Alamos National Lab., NM (USA); Wuppertal Univ. (Gesamthochschule) (Germany, F.R.). Fachbereich Physik der Bergischen). 1987. Contract W-7405-ENG-36. 3p. (CONF-870790—1). NTIS, PC A02. File Number DE87013170.

From 1. European workshop on high T/sub c/ superconductors and potential applications; Genova, Italy (1 Jul 1987).

The rf surface resistance is measured for $Y_1Ba_2Cu_3O_7$ samples fabricated in different laboratories by exposing them to the rf field of a niobium cavity at 3 GHz in a temperature range from 4.2 to 300 K. The rf surface resistance of the best sample decreases sharply at the transition temperature from typically 0.2 Ω at 100 K by more than two orders of magnitude. The residual losses measured at 4.2 K in the superconducting host cavity are strongly dependent on the purity of the sample. The observed dependence of the residual losses on the rf field level is attributed to the granular structure of the superconductor. Rf magnetic fields of up to 1800 A/m have been achieved in pulsed operation. This field corresponds to a surface current density of 1.3 . 10^6 A/cm^2. The low residual losses indicate that less than 1% of the conduction electrons of the perovskite superconductors remain unpaired.

46807 (SAND—87-2044C) Freestanding films of YBa_2Cu_3O/sub 6.9/. Ginley, D.S.; Kwak, J.F.; Mitchell, M.A.; Venturini, E.L.; Fu, W.; Baughman, R.J. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 5p. (CONF-870873—11). NTIS, PC A02/MF A01; GPO Dep. File Number DE87014156.

From 18. conference on low temperature physics; Kyoto, Japan (20 Aug 1987).

Thick (20 to 300 μm) freestanding films of YBa_2Cu_3O/sub 6.9/ have been obtained through resintering powdered YBa_2Cu_3O/sub 6.9/ on fused silica followed by a subsequent oxygen anneal step. The transport and magnetic properties for these films are comparable to those for our best bulk ceramic samples.

46808 (DOE/ER/45189—T1) Theory of non-equilibrium growth: Progress report. Savit, R.; Sander, L.M. (Michigan Univ., Ann Arbor (USA). Dept. of Physics). 22 Jun 1987. Contract FG02-85ER45189. 47p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87012009.

The bulk of the new work described arises naturally from the studies begun under the present grant, namely the investigation of the subtle interplay of symmetry and disorder in the formation of non-equilibrium objects. The major thrust of the research has been the description of how growth processes can in some cases give rise to macroscopic patterns subtly influenced by microscopic dynamics, and in other cases to scale-invariant morphologies. Such processes are clearly of great intellectual interest, and correspond to the way in which many natural objects are formed, both in the context of physics and of biology. The first several sections of new work proposed are about ballistic aggregation and fractal aggregation. Next, are the studies in the new subject of multifractals. The following section describes a continuation of our exploration of growth oscillations. Following that, is described an ongoing study of pattern formation, and a series of new studies growing out of our current work on microscopic solvability. Included here are two topics in which the dynamics of diffuse interfaces must be considered.

46809 (IC—86/294) Statistical mechanics of a one-component fluid of charged hard rods in 1D. Vericat, F.; Blum, L. (International Centre for Theoretical Physics, Trieste (Italy)). Sep 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703058.

The statistical mechanics of a classical one component system of charged hard rods in a neutralizing background is investigated in 1D stressing on the effects of the hard core interactions over the thermodynamic and the structure of the system. The crystalline status of the system at all temperatures and densities and the absence of phase transitions is shown by extending previous results of Baxter and Kunz on the one-component plasma of point particles. Explicit expressions for the thermodynamic functions and the one-particle correlation function are given in the limits of small and strong couplings. 6 refs, 2 figs.

46810 (IC—86/296) On oscillation of a kind of integro-differential equation with delay. Zhang, Binggen. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703059.

A sufficient condition is obtained for the oscillation of a kind of integro-differential equation with delay. 3 refs.

46811 **(IC—86/307) Oscillatory and nonoscillatory properties of first order differential equations with piecewise constant deviating arguments.** Zhang, B.G.; Parhi, N. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703061.

In this paper, sufficient conditions have been obtained for oscillation and non-oscillation of solutions of first order differential equations with piecewise constant deviating arguments. These equations occur in mathematical models of certain biomedical problems. 6 refs.

46812 **(IC—86/311) Laplace operator on a bundle with a Sasaki metric.** Abed, S.H. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703063.

Differential operators of various kinds have always been ominipresent in differential geometry. The role of some of them is prominent and decisive in many geometric structures carried by a differentiable manifold. It is the classical concept of covariant derivation that is formulized and generalized in the theory of connections. The building of cohomology theory rests upon the notion of exterior derivative and upon those associated to it via some additional structures (a metric, for example) on the underlying manifold: the codifferential δ, the Laplace operator, etc. The objective of my research was to investigate in a systematic manner some of these operators in the context of Finsler bundles. In the present paper we give the answer to an important question: How can one calculate the Laplace operator on a bundle with a Sasaki metric? 3 refs.

46813 **(IC—86/316) Is the compactified vacuum semiclassically unstable.** Maeda, Keiichi. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703067.

It is shown, by applying the positive energy theorem, that the present vacuum (M/sup 4/xK/sup D/) in some higher-dimensional theories (e.g. the Candelas-Weinberg model) is stable against decay by quantum tunnelling without change of topology. Frieman and Kolb have found a quantum tunnelling instability of the present vacuum in the same models. But they did not take into account the gravitational effect, which is important and prevents the universe from decaying into the higher-dimensional de Sitter phase. 17 refs, 1 fig.

46814 **(IC—86/330) Quantum electrodynamics based on self-energy: Spontaneous emission in cavities.** Barut, A.O.; Dowling, J.P. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703071.

We extend a previously developed formulation of QED based on self-energy to include the effect of perfectly conducting boundaries on spontaneous emission. The method is quite general and applicable to any quantum system and many boundary geometries. In particular, we compute the spontaneous emission rate of an atom near a conducting plate, inside a spherical cavity and between parallel plates, we give general formulas and predict both enhanced and inhibited rates, in agreement with recent experiments. 36 refs, 4 figs.

46815 **(IC—86/331) Quantum mechanics with spontaneous localization and the quantum theory of measurement.** Benatti, F.; Ghirardi, G.C.; Rimini, A.; Weber, T. (International Centre for Theoretical Physics, Trieste (Italy)). Oct 1986. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703072.

Recently a modification of quantum dynamics allowing a unified description of microscopic and macroscopic systems has been introduced. We investigate here the consequences of this approach for the measurement problem. We show that in this way one gets a consistent and objective solution of the problem of the wave packet reduction. 11 refs, 2 figs.

46816 **(IC—86/335) Direction dependent connections of complex manifolds and their submanifolds.** Rastogi, S.C. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703073.

By using the method of calculus of variations in 1967, Rund introduced a generalised metric on complex manifold. He also defined direction dependent connections on such manifolds. Later on in 1972, Rund introduced general direction dependent connections on complex manifolds. Based on these connection coefficients he defined curvature and torsion tensors and obtained some interesting results in case of metric connections. The aim of this paper is to study submanifolds of such complex manifolds. In this paper I have defined induced and intrinsic connections and curvature tensors based on them. Besides this equations analogous to Gauss-Codazzi have been obtained for both induced and intrinsic connections. In the end some applications of these results are given by studying submanifolds of complex manifolds of isotropic curvature. 2 refs.

46817 **(IC—86/347) On the theory of the Michelson-Morley experiment in the Earth's gravitational field.** Zhang, Y.Z. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703077.

In this paper we discuss further the expected results for a Michelson-Morley-type experiment with one of the arms in the vertical direction in the Earth's gravitational field. It is shown from a dimensional analysis that the expected effect, in the case of the arms having length of the order of 1m, is the order of ml/R. This means that the expected fringe shift, if wavelength of light is 1μm, is the order of 10/sup -10/ when the interferometer is rotated through 90. 7 refs, 2 figs.

46818 **(IC—86/359) On the interaction of a planar metal surface with a charge and with a molecule.** Mukhopadhyay, G. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 51p. NTIS (US Sales Only), PC A04/MF A01. File Number DE87703083.

We present a dynamic response approach to the interaction of a planar metal surface described by the semi-infinite jellium with a charge and with a molecule. In particular, we express the dynamic image potential of a moving charge as well as the van der Waals interaction energy of a neutral atom or molecule (static as well as moving) in terms of a form factor $F(k,\omega)$. This form factor F is not known accurately for general k and ω, and we discuss various formulas for different approximate forms for F. We show that the weakening (or saturation) of the interactions at distances close to the surface is determined mainly by the large k behaviour of F and therefore we emphasize the need for an accurate numerical determination of this form factor for large k-regime. 72 refs, 2 figs.

46819 **(IC—86/363) Coherent and incoherent exciton motion in the framework of the continuous time random walk.** Barvik, I.; Szocs, V. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703084.

We derive the hopping time distribution function of the continuous time random walk theory starting from the microscopic form of memory functions for one-dimensional exciton motion. 11 refs, 1 fig.

46820 **(IC—86/366) Geometrization of Planck length in composite gravity and supergravity.** Lukierski, J.; Mozrzymas, M.; Rytel, L. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703085.

The Volkov-Akulov (VA) standard action can be treated as composite cosmological term, with composite vierbein described by massless Goldstone fermions. By considering massive Goldstone fermions one can relate classically VA and composite Einstein gravity actions, provided the mass of Goldstone fermions, Planck mass and the SSB scale are related. It is also shown that the action of N=1 and N=2 supergravity with composite gauge fields can be written respectively module topological terms as N=1 and N=2 composite supersymmetric cosmological terms. 17 refs.

46821 (IC—86/379) Finite-dimensional matrix representation of the differential operator, determinental form and zeros of special functions. Santhanam, T.S.; Jagannathan, R. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703091.

Finite dimensional matrix representations of differential operators are discussed. The determinental form of polynomials is used to relate their zeros to the eigenvalues of Jacobi's tridiagonal matrix for the case of special functions. The distribution of these zeros is analyzed. 9 refs.

46822 (IC—86/388) Riemann surfaces and string theory. Gava, E. (International Centre for Theoretical Physics, Trieste (Italy)). Nov 1986. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703093.

After some mathematical background on Riemann surfaces and moduli space, the bosonic string partition function is analyzed and the physical meaning of its divergences is discussed. Selberg's and analytic expressions are compared. 40 refs.

46823 (IC—86/392) New class of spherically symmetric interior solution with cosmological constant Λ. Xu Chongming; Wu Xuejun; Huang Zhun. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703095.

In this paper, a new class of spherically symmetric interior solution with cosmological constant Λ is obtained, to which Florides' solution is extended. As a special case, the metric in uniform proper density is discussed. The Robson junction condition is also extended to the case with Λ, which is a set of necessary and sufficient condition for a spherically symmetric metric to join smoothly onto the vacuum metric at a nonnull boundary surface. The new solution satisfies the extended Robson condition. 13 refs.

46824 (IC—87/1) Classical model of the Dirac electron in curved space. Barut, A.O.; Pavsic, M. (International Centre for Theoretical Physics, Trieste (Italy)). Jan 1987. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703100.

The action for the classical model of the electron exhibiting Zitterbewegung is generalized to curved space by introducing a spin connection. The dynamical equations and the symplectic structure are given for several different choices of the variables. In particular, we obtain the equation of motion for spin and compare it with the Papapetrou equation. 18 refs.

46825 (KFKI—1986-79/A) Exact solution for particle trajectories in modified quantum mechanics. Diosi, L. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Oct 1986. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703118.

Considering a simple quantum master equation for a free particle it is proved that after a given period of relaxation the solutions can be interpreted exactly in terms of uniform localized wave packets whose centers imitate classical trajectories. 13 refs.

46826 (LA—10878) Primer on coupling collective electronic oscillations to nuclei. Solem, J.C.; Biedenharn, L.C. Jr. (Los Alamos National Lab., NM (USA)). Jul 1987. Contract W-7405-ENG-36. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87012701.

On the basis of simple heuristic models, we show that atomic electrons can amplify fields observed at the nucleus, generate harmonics, and drive higher multipolarities. Considered is a model with the nucleus at the focus of a uniformly charged ellipsoid. It amplifies an oscillating external electric field and produces an oscillating electric-field gradient but no higher derivatives. The electric field has only odd harmonics and the electric-field gradient has only even harmonics. There is an optimum intensity for driving each harmonic. Commented on is the relevance of these results to the U^{235} experiment and to the gamma-ray laser.

46827 (LA-UR—87-2315) Different ways of looking at the electromagnetic vacuum. Milonni, P.W. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 33p. (CONF-870785—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013150.

From Adriatico Research conference on vacuum in nonrelativistic matter-radiation systems; Trieste, Italy (1 Jul 1987).

Some thoughts on the electromagnetic vacuum are presented in connection with the vacuum and source fields as alternative physical bases for understanding spontaneous emission, the Lamb shift, Casimir effects, van der Waals forces, and the "thermalization" of vacuum fluctuations for a uniformly accelerated observer.

46828 (LA-UR—87-2386) Antiprotons are another matter. Hynes, M.V. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 20p. (CONF-8706176—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013159.

From Workshop and symposium on the physics of low energy, stored, and trapped particles; Stockholm, Sweden (14 Jun 1987).

Theories of gravity abound, whereas experiments in gravity are few in number. An important experiment in gravity that has not been performed is the measurement of the gravitational acceleration of antimatter. Although there have been attempts to infer these properties from those of normal matter, none of these theoretical arguments are compelling. Modern theories of gravity that attempt to unify gravity with the other forces of nature predict that in principle antimatter can fall differently than normal matter in the Earth's field. Some of these supergravity theories predict that antimatter will fall faster, and that normal matter will fall with a small Baryon-number dependance in the earth's field. All of these predictions violate the Weak Equivalence Principle, a cornerstone of General Relativity, but are consistent with CPT conservation. In our approved experiment at LEAR (PS-200) we will test the Weak Equivalence Principle for antimatter by measuring the gravitational acceleration of the antiproton. Through a series of deceleration stages, antiprotons from LEAR will be lowered in energy to ~4 Kelvin at which energy the gravitational effect will be measureable. The measurement will employ the time-of-flight technique wherein the antiprotons are released vertically in a drift tube. The spectrum of time-of-flight measurements can be used to extract the gravitational acceleration experienced by the particles. The system will be calibrated using H^- ions which simulates the electromagnetic behavior of the antiproton, yet is a baryon to ~0.1%. To extract the gravitational acceleration of the antiproton relative to the H^- ion with a statistical precision of 1% will require the release of ~10^6 to 10^7 particles.

46829 (LBL—23483) A realistic model for quantum theory with a locality property. Eberhard, P.H. (Lawrence Berkeley Lab., CA (USA)). Apr 1987. Contract AC03-76SF00098. 61p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87012887.

A model reproducing the predictions of relativistic quantum theory to any desired degree of accuracy is described in this paper. It involves quantities that are independent of the observer's knowledge, and therefore can be called real, and which are defined at each point in space, and therefore can be called local in a rudimentary sense. It involves faster-than-light, but not instantaneous, action at distance.

46830 (N—87-25140) Role and behavior of spin in gravitational physics. Final report, 15 May 1986-15 May 1987. Ray, J.R. (Clemson Univ., SC (USA)). Jul 1987. 6p. (NASA-CR—180654; NAS—1.26:180654). NTIS, PC A02/MF A01.

A self-consistent method of introducing spin into any Lagrangian based theory of gravitation was developed. The metric variation of the Lagrangian in the theory leads to an improved energy-momentum tensor which represents the source term in the gravitational field equations. The goal of the research is the construction of a theory general enough to be used to investigate spin effects in astrophysical objects and cosmology, and also to serve as a basis for discussion of the theoretical ideas tested by the NASA

Gyroscope Experiment (aboard Gravity Probe B). Specific accomplishments in the following areas are summarized: the inclusion of electromagnetism into the variational principle for spinning matter, formulation of a self-consistent theory for the case of a fluid in which particle production processes occur, and the derivation of the Raychaudhuri equation in the case of spinning matter.

46831 **(UWThPh—1987-06) Holistic aspects of quantum mechanics.** Pietschmann, H. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1987. 20p. (In German). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703129.

Aspects of quantum mechanics irreconcilable with classical physics are outlined. Quantum mechanics started with a negative statement about reality, namely: it is impossible to determine momentum and position of a particle simultaneously. Meanwhile it has generated an impressive body of predictions which can be tested and have been confirmed by suitable experiments. As a consequence a naive, local, materialistic concept of reality must be abolished and a novel approach, the holistic is introduced. This is illustrated by some examples e.g. the Pauli exclusion principle for electrons, the electron capture decay of /sup 135/La as a model of the wavefunction reduction, the Bohr radius of the atom, electron localisation in the atom. An example from the quantum field theory is the calculation of magnetic moments of electron and muon where a particle cannot be considered separately and all other particles must be taken into account. (G.Q.).

46832 **(UWThPh—1987-12) Dynamical entropy of quasi-free automorphisms.** Narnhofer, H.; Thirring, W. (Vienna Univ. (Austria). Inst. fuer Theoretische Physik). 1987. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703134.

The dynamical entropy of quasifree automorphisms and quasifree states is calculated and shown to be the entropy of the shift created by the group velocity. Some continuity properties are proved.

46833 **Baker—Campbell—Hausdorff relations for the super-Poincare group.** Kostelecky, V.A.; Truax, D.R. (Department of Physics, Indiana University, Bloomington, Indiana 47405 and Theory Division, CERN, 1211 Geneve 23, Switzerland). *Journal of Mathematical Physics (New York);* **28**: No. 10, 2480-2487(Oct 1987).

Baker—Campbell—Hausdorff relations are obtained for the connected supergroup associated with the super-Poincare algebra iosp(1chemical bond4).

46834 **Critical behavior of a new class of statistical-mechanical models with continuous variables and discretely valued interactions.** Lee, I.; Shrock, R.E. (Department of Physics, Ohio State University, Columbus, Ohio 43210). *Physical Review [Section] B: Condensed Matter;* **36**: No. 7, 3712-3715(1 Sep 1987).

We formulate a new type of classical statistical-mechanical models with continuous variables but discretely valued interactions, and determine, via exact solutions and high-temperature series expansions, the critical behavior of several such models.

46835 **Path-integral derivation of the complex ABCD Huygens integral.** Wright, E.M.; Garrison, J.C. (Optical Sciences Center, University of Arizona, Tucson, Arizona 85721). *Journal of the Optical Society of America A: Optics and Image Science;* **4**: No. 9, 1751-1755(Sep 1987).

The Huygens integral, or Green's function, for paraxial beam propagation in a generalized lenslike medium is derived as a Feynman path integral involving a summation over real rays. This formulation provides a physically intuitive understanding of the structure of the Green's function. The path integral is evaluated by introducing in a consistent manner the notion of complex rays, and the familiar result for the Huygens integral in terms of the complex ABCD matrix of the medium is obtained.

46836 **Cary, Rusu, and Skodje reply.** Cary, J.R.; Rusu, P.; Skodje, R.T. (University of Colorado, Boulder, Colorado 80309). *Physical Review Letters;* **59**: No. 8, 943-943(24 Aug 1987).

A reply to he comment on quantum effects in a macroscopic system is prsented. (AIP)

46837 **Predicting chaotic time series.** Farmer, J.D.; Sidorowich, J.J. (Theoretical Division and Center for Nonlinear Studies, MS B258, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review Letters;* **59**: No. 8, 845-848(24 Aug 1987).

We present a forecasting technique for chaotic data. After embedding a time series in a state space using delay coordinates, we "learn" the induced nonlinear mapping using local approximation. This allows us to make short-term predictions of the future behavior of a time series, using information based only on past values. We present an error estimate for this technique, and demonstrate its effectiveness by applying it to several examples, including data from the Mackey-Glass delay differential equation, Rayleigh-Benard convection, and Taylor-Couette flow.

46838 **Geometrical-integrability constraints and equations of motion in four plus extended super spaces.** Chau, L.L. (Physics Dept., Brookhaven National Lab., Upton, NY 11973). pp 394-397 of Proceedings of the XXIII international conference on high energy physics. Loken, S.C. Bellingham, WA; SPIE Society of Photo-Optical Instrumentation Engineers (1987). (CONF-860701—).

From 23. international conference on high-energy physics; Berkeley, CA, USA (16 Jul 1986).

It is pointed out that many equations of motion in physics, including gravitational and Yang-Mills equations, have a common origin: i.e. they are the results of certain geometrical integrability conditions. These integrability conditions lead to linear systems and conservation laws that are important in integrating these equations of motion.

46839 **Cartan determinants, LIE algebra extensions, and the exceptional group series.** Capps, R.H. (Purdue Univ., West Lafayette, IN 47907). pp 273-282 of Rationale of beings: Recent developments in particle, nuclear and general physics. Ishikawa, K.; Kawazoe, Y.; Matsuzaki, H.; Takahashi, K. Teaneck, NJ; World Scientific Pub. Co. (1986).

In this note the author utilizes the determinant of the generalized Cartan matrix for candidate Dynkin systems for two purposes. The first is to provide an uncomplicated criterion for classifying candidate one-root extensions of diagrams for semisimple Lie algebras. The second is to help determine some important properties of related Lie algebras and their representations.

46840 **Solutions of discrete mechanics near the continuum limit.** Lee, T.D. (Columbia Univ., New York, NY 10027). pp 265-272 of Rationale of beings: Recent developments in particle, nuclear and general physics. Ishikawa, K.; Kawazoe, Y.; Matsuzaki, H.; Takahashi, K. Teaneck, NJ; World Scientific Pub. Co. (1976).

The time-distribution in classical discrete mechanics near the continuum limit is given for a non-relativistic particle moving in an arbitrary potential.

46841 **(CONF-870788—1-Summ.) Heavy-particle collisions in the plasma edge.** Phaneuf, R.A.; Hunter, H.T.; Barnett, C.F. (Oak Ridge National Lab., TN (USA)). Jul 1987. Contract AC05-84OR21400. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87012928.

From Meeting on atomic and molecular data for plasma edge studies; Vienna, Austria (8 Jul 1987).

Available cross-section data for heavy-particle collision processes which play important roles in the edge plasma of magnetically-confined fusion devices are surveyed and reviewed. The species considered include H, H_2, He, C, O, Fe, and their ions. The most important heavy-particle collision processes occurring in the edge plasma are charge-exchange reactions. Excitation and dissociation processes are also considered. Emphasis is given to relative collision velocities corresponding to plasma ion temperatures in the 1 to 200 eV range. Evaluated or recommended data are presented where possible along with their estimated uncertainties, and gaps in the data base are indicated.

46842 **(CONF-8706119—2) Problems in modeling TF ripple loss of fast alphas from a tokamak reactor.** Hively, L.M. (Oak Ridge National Lab., TN (USA)). 15 Jun 1987. Contract AC05-84OR21400. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011677.

From Workshop on alpha particle effects in ETR; Washington, DC, USA (15 Jun 1987).

The report consists of viewgraphs. Topics covered are (1) basic ripple processes, (2) simulations of combined processes, (3) modeling issues, (4) new physics problems, and (5) consequences for ETR/ITER. (WRF)

46843 **(CTH-IEFT/PP—1986-05) Fluid analysis of electromagentic ballooning modes in a fully toroidal description.** Andersson, P.; Weiland, J. (Chalmers Univ. of Tech., Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics). 1986. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87752426.

A comparatively complete two fluid description of collisionless electromagnetic ballooning modes has been derived. Using an unexpanded ion density response it has been shown that a necessary and sufficient condition for an instability below the MHD/BETA/ limit is the presence of an ion temperature gradient exceeding a threshold. The cause of this instability has been identified and an analytical dispersion relation is given.

46844 **(CTH-IEFT/PP—1986-09) Time evolution of the velocity distribution of neutral beam injections heated by ICRH in a two component plasma.** Andersson, D.; Eriksson, L.G.; Lisak, M. (Chalmers Univ. of Tech., Goeteborg (Sweden). Inst. for Electromagnetic Field Theory and Plasma Physics). 1986. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87752427.

The time of the distribution function of the beam injected particles in the presence of ICRH in a two component plasma is determined. Consideration is restricted to the time development during two complementary time periods: (i) the early time period i.e. $0 < t << /tav/sb(s)$, and (ii) the quasi-steady-state, i.e. $t > /tav/sb(s)$, where /tav/sb(s) is the slowing-down time for beam ion-electron collisions. Explicit analytical solutions are obtained for anisotropic as well as isotropic beam injection.

46845 **(DOE/ER/52127—14) A model for electron currents near a field null.** Stark, R.A.; Miley, G.H. (Naval Surface Weapons Center, Silver Spring, MD (USA); Illinois Univ., Urbana (USA)). 1987. Contract FG02-86ER52127. 21p. (CONF-870631—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013014.

From 8. US symposium on compact toroid research and the 9. US/Japan workshop on compact toroids; College Park, MD, USA (4 Jun 1987).

The fluid approximation is invalid near a field null, since the local electron orbit size and the magnetic scale length are comparable. To model the electron currents in this region we propose a single equation of motion describing the bulk electron dynamics. The equation applies to the plasma within one thermal orbit size of the null. The region is treated as unmagnetized; electrons are accelerated by the inductive electric field and drag on ions; damping is provided by viscosity due to electrons and collisions with ions. Through variational calculations and a particle tracking code for electrons, the size of the terms in the equation of motion have been estimated. The resulting equation of motion combines with Faraday's Law to produce a governing equation which implicitly contains the self inductive field of the electrons. This governing equation predicts that viscosity prevents complete cancellation of the ion current density by the electrons in the null region. Thus electron dynamics near the field null should not prevent the formation and deepening of field reversal using neutral-beam injection.

46846 **(DOE/ER/53192—5) Magnetic surface mapping with highly transparent screens on the Auburn Torsatron.** Hartwell, G.J.; Gandy, R.F.; Henderson, M.A.; Hanson, J.D.; Swanson, D.G.; Bush, C.J.; Colchin, R.J.; England, A.C.; Lee, D.K. (Auburn Univ., AL (USA). Dept. of Physics; Oak Ridge National Lab., TN (USA)). [1987]. Contract FG05-85ER53192. 38p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013454.

In stellarator-type magnetic confinement devices (of which the torsatron is one), the magnetic field is produced entirely by external, current-carrying coils. Two methods for mapping magnetic surfaces in the Auburn Torsatron were tested and compared, both of which involve the use of highly transparent screens. The first method consists of coating the screen with a phosphor that emits light when struck by electrons emitted by an electron gun. A pattern representative of a magnetic surface is formed on the screen, and this pattern is recorded photographically. The second method uses an uncoated screen to collect electrons emitted from an emissive probe, which is scanned over a poloidal cross section of the torus. Under certain conditions, the collected current is a constant over a particular magnetic surface so that a contour plot of the current versus position is equivalent to a plot of the magnetic surfaces. Parametric studies of the two methods are presented, and the effectiveness of each technique is discussed.

46847 **(DOE/ER/53220—T1) Plasma theory and simulation: Quarterly progress report Nos. 1 and 2, January 1, 1986-June 30, 1986.** Birdsall, C.K. (California Univ., Berkeley (USA). Electronics Research Lab.). 30 Jun 1986. Contract FG03-86ER53220. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013285.

This quarterly report deals with General Plasma Theory and Simulation. Computer simulation of bounded plasma systems, with external circuits, is discussed in considerable detail. Artificial cooling of trapped electrons in bounded simulations was observed and is now attributed to noiseless injection; the cooling does not occur if random injection is used. This report also deals with Plasma-Wall Physics and Simulation. The collector and source sheaths at the boundaries of warm plasma are treated in detail, including ion reflection and secondary electron emission at the collector. The Kelvin-Helmholtz instability is observed in a self-consistent magnetized sheath, producing long-lived vortices which increase the particle transport to the wall dramatically.

46848 **(DOE/ER/53222—95) Second regime tokamak operation at large aspect ratio.** Bhattacharjee, A.; Iacono, R.; Marshall, T.C.; Mauel, M.E.; Navratil, G.A.; Paranicas, C.; Sabbagh, S.A.; Sen, A.K.; Van Dam, J.W.; Wang, X.H. (Columbia Univ., New York (USA). Plasma Physics Lab.). Jun 1987. Contract FG02-86ER53222;FG02-86ER53236. 199p. NTIS, PC A09/MF A01; 1; GPO Dep. File Number DE87013855.

The equilibrium, stability, and transport properties of large aspect ratio tokamaks operating at the second stability regime are described theoretically using numerical and analytical techniques. It has been shown that, at large aspect ratio, significant current profile control is possible with relatively modest amounts of neutral beam current drive, and the power needed to access and maintain the second regime operation is calculated to be about 3 MW using the results of an integrated 1.5D transport and stability code. An example second regime experiment has been described and the results are presented of extensive calculations illustrating several possible operating scenarios, external and internal model stability boundaries, and the experimental features needed to evaluate and test the high beta tokamak theories. The theory which describes the stabilizing effect of energetic particles during high beta operation was extended to finite aspect ratio. A key technical problem for application of this technique appears to be caused by ripple transport.

Plasma rotation effects are found to be generally destabilizing and several other schemes for improved access to the second stability regime are discussed including ponderomotive stabilization of the plasma edge region and active feedback control.

46849 **(DOE/ER/53223—T1) [Plasma properties: Annual report].** (New York Univ., NY (USA). Courant Inst. of Mathematical Sciences). 1987. Contract FG02-86ER53223. 34p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013662.

The Magneto-Fluid Dynamics Division of the Courant Institute is engaged in a broad program of basic research in the theoretical aspects of plasma physics and magneto-fluid dynamics with emphasis on those areas which are relevant to the fusion energy program. The total research program in the division includes efforts in the areas of plasma containment, stability, equilibrium, transport, wave propagation (including shock waves), heating, orbit theory, as well as numerical experiments and the development of practical numerical methods in all plasma problems. Applications are made to the following project areas: Tokamaks, Mirrors, Stellarators, and Alternate Concepts. Developments include the whole spectrum of models from macroscopic MHD and guiding center to Vlasov, drift kinetic Fokker-Planck, and Boltzmann. This document describes research completed as well as programs in progress.

46850 **(DOE/ET/53088—283) Theory of trapped-particle-induced resistive fluid turbulence.** Biglari, H.; Diamond, P.H. (Texas Univ., Austin (USA). Inst. for Fusion Studies). May 1987. Contract FG05-80ET53088. 29p. (IFSR—283). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014422.

A theory of anomalous electron heat transport, evolving from trapped-particle-induced resistive interchange modes, is proposed. These latter are a new branch of the resistive interchange-ballooning family of instabilities, destabilized when the pressure carried by the unfavorably-drifting trapped particles is sufficiently large to overcome stabilizing contributions coming from favorable average curvature. Expressions for the turbulent heat diffusivity and anomalous electron thermal conductivity at saturation are derived for two regimes of trapped particle energy: (1) a moderately-energetic regime, which is "fluid-like" in the sense that the unstable mode grows faster than the time that it takes for particles in this energy range to precess once around the torus; and (2) a highly-energetic regime, where the trapped species has sufficiently high energy as to be able to resonantly interact with the mode. Unlike previous theories of anomalous transport, the estimates of diffusion and transport obtained here are self-consistent, since the trapped particles do not "see" the magnetic flutter due to their rapid bounce motion. The theory is valid for moderate electron-temperature, high ion-temperature (auxiliary-heated) plasmas, and as such, is relevant for present and future-generation experimental fusion devices.

46851 **(DOE/ET/53088—287) Momentum and thermal transport in neutral-beam-heated tokamaks.** Mattor, N.; Diamond, P.H. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Jul 1987. Contract FG05-80ET53088. 28p. (IFSR—287). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014423.

The report explores the relation between momentum and thermal transport in neutral-beam-heated tokamaks with subsonic toroidal rotation velocity. A theory of diffusive momentum transport driven by ion-temperature-gradient-driven turbulence (eta/sub i/-turbulence) is presented. In addition, the level of eta/sub i/-turbulence is enhanced by radially sheared toroidal rotation. The resulting ion shear viscosity chi/sub phi/ is found. The associated ion thermal diffusivity, chi/sub i/, is identical to chi/sub phi/. Thus, a scenario based on velocity-shear-enhanced eta/sub i/-turbulence is consistent with the experimentally observed relationship between thermal and momentum confinement.

46852 **(DOE/ET/53088—290) Neoclassical electron heat conduction in tokamaks performed by the ions.** Ware, A.A. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Jul 1987. Contract FG05-80ET53088. 8p. (IFSR—290). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014002.

The increment to neoclassical ion heat conduction caused by electron collisions is shown to act like electron heat conduction since the energy is taken from and given back to the electrons at each diffusion step length. It can exceed electron neoclassical heat conduction by an order of magnitude.

46853 **(DOE/ET/53088—292) Thermally driven convective cells and tokamak edge turbulence.** Thayer, D.R.; Diamond, P.H. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Jul 1987. Contract FG05-80ET53088. 44p. (IFSR—292). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014424.

A unified theory for the dynamics of thermally driven convective cell turbulence is presented. The cells are excited by the combined effects of radiative cooling and resistivity gradient drive. The model also includes impurity dynamics. Parallel thermal and impurity flows enhanced by turbulent radial diffusion regulate and saturate overlapping cells, even in regimes dominated by thermal instability. Transport coefficients and fluctuation levels characteristic of the saturated turbulence are calculated. It is found that the impurity radiation increases transport coefficients for high density plasmas, while the parallel conduction damping, elevated by radial diffusion, in turn quenches the thermal instability. The enhancement due to radiative cooling provides a resolution to the dilemma of explaining the experimental observation that potential fluctuations exceed density fluctuations in the edge plasma (e PHI/T/sub e/ > n/n_0).

46854 **(DOE/ET/53088—293) New directions in Vlasov plasma turbulence and anomalous transport.** Terry, P.W.; Diamond, P.H.; Hahm, T.S. (Texas Univ., Austin (USA). Inst. for Fusion Studies; Princeton Univ., NJ (USA). Plasma Physics Lab.). Jul 1987. Contract FG05-80ET53088. 26p. (CONF-8704170—2; IFSR—293). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014425.

From International conference on plasma physics; Kiev, USSR (6 Apr 1987).

The nature and role of nonwavelike incoherent fluctuations in Vlasov plasma turbulence and transport are considered. In particular, electrostatic drift holes, which are localized, self-binding incoherent fluctuations giving large negative skewness, are described in detail. Both the three dimensional structure and dynamics of drift holes are discussed. The important role of incoherent fluctuations in plasma transport is underscored with an example, that of transport in drift-Alfven turbulence.

46855 **(GA-A—18912) Recent improvements to the GATO MHD [magnetohydrodynamics] stability package.** Turnbull, A.D.; Helton, F.J.; Greene, J.M.; Chu, M.S. (GA Technologies, Inc., San Diego, CA (USA)). Jul 1987. Contract AC03-84ER53158. 8p. (CONF-870947—5). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013450.

From 12. conference on the numerical simulation of plasmas; San Francisco, CA, USA (20 Sep 1987).

Recent interest in highly elongated and strongly shaped tokamaks has necessitated a number of modifications to the GATO/GAEQ equilibrium and stability package. In particular, the GATO mapping routines have been rewritten to properly resolve the highly elongated ($\kappa > 5$) flux surfaces that often arise near the magnetic axis when the separatrix elongation exceeds two. A more accurate treatment of logarithmic divergences in the Green's function vacuum representation is also described.

46856 **(IAE—4221/7) Study on the characteristics of CO/sub 2/-laser for scattering diagnostics at tokamak devices.** Zhukovskij, V.G.; Rtishchev, V.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703050.

The purpose of the study is the construction of possibly simple-design single-frequency monopulse CO/sub 2/-laser for scattering diagnostics at tokamak devices. Timing and frequency characteristics of radiation are investigated. For obtaining narrow (— 100 ns) radiation pulse with maximum energy the mixtures with low nitrogen content have been selected. The selection of transverse modes has been attained applying the unstable resonator.

Two methods of longitudinal modes selection - fine electrochemical adjustment of the resonator length and injection of continuous CO/ sub 2/-laser radiation are considered. In both cases the bandwidth of laser generation — 100 MHz with pulse energy — 7 J is obtained. Both methods of narrowing the generation band can be realized in pulse CO/sub 2/-laser. 22 refs.; 5 figs.

46857 (IAE—4228/6) Collision integral for inhomogeneous plasma in a magnetic field effecting on particle collisions. Trushin, S.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1985. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE87703051.

The collision integral of kinetic equation for the case when the Larmor radius of particles is less than the Debye radius is obtained. Though this problem has been considered in a number of studies main attention has been given usually to the effect of variation of Coulomb logarithm which is valid also for homogeneous plasma. In the present study a series of new components containing derived coordinate-distribution functions which under certain conditions can probably lead to variation of known coefficients of diffusion and thermal conductivity of plasma is obtained. The causes of difference of some results of other authors, for example, for electron flux due to transverse to the field ion motion are considered as well. 11 refs.

46858 (IC—86/327) Study of ionization equilibrium of high temperature and low density plasma. Alam, B. (International Centre for Theoretical Physics, Trieste (Italy)). Dec 1986. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE87703070.

The works on ionization equilibrium available in the literature are briefly reviewed. Fractional ion abundance of coronal ions of C, N, O, Ne, Mg, Al, Si, S, Ca and Fe are calculated by using a new formula for the rate coefficient of dielectric recombination given by Alam and Ansari (1985). On comparison it is found that our results for highly charged ions are nearly in agreement with those of others. But for ions of low ionization stages our results differ substantially. 38 refs, 4 figs, 10 tabs.

46859 (ORNL/TM—10223) ICRF heating in a straight, helically symmetric stellarator. Jaeger, E.F.; Weitzner, H.; Batchelor, D.B. (Oak Ridge National Lab., TN (USA)). Jul 1987. Contract AC05-84OR21400. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013364.

Experimental observations of direct ion cyclotron resonant frequency (ICRF) heating at fundamental ion cyclotron resonance on the L-2 stellarator have stimulated interest in the theoretical basis for such heating. In this paper, global solutions for the ICRF wave fields in a helically symmetric, straight stellarator are calculated in the cold plasma limit. The component of the wave electric field parallel to B-vector is assumed zero. Helical symmetry allows Fourier decomposition in the longitudinal (z) direction. The two remaining partial differential equations in tau and phi identical to Θ - hz (h is the helical pitch) are solved by finite differencing. Energy absorption and antenna impedance are calculated from an ad hoc collision model. Results for parameters typical of the L-2 and Advanced Toroidal Facility (ATF) stellarators show that direct resonant absorption of the fundamental ion cyclotron resonance occurs mainly near the plasma edge. The magnitude of the absorption is about half that for minority heating at the two-ion hybrid resonance.

46860 (ORNL/TM—10374) Studies of a flexible heliac configuration. Hender, T.C.; Cantrell, J.L.; Harris, J.H.; Carreras, B.A.; Lynch, V.E.; Lyon, J.F.; Fabregas, J.A.; Guasp, J.; Lopez-Fraguas, A.; Navarro, A.P. (Junta de Energia Nuclear, Madrid (Spain). Div. de Fusion). Jul 1987. Contract AC05-84OR21400. 41p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013367.

This paper documents a detailed study of the Flexible Heliac configuration. The remarkable flexibility of this device - which allows variation of the rotational transform, shear, and magnetic well depth over a relatively wide range - is described. Engineering considerations of error fields, finite cross-section conductors, and plasma coil clearances are also discussed.

46861 (ORNL/TM—10382) Volt-second consumption in tokamaks with sawtooth activity. Houlberg, W.A. (Oak Ridge National Lab., TN (USA)). 1987. 31p. NTIS, PC A03/MF A01. File Number DE87013366.

The effects of sawtooth activity on the poloidal magnetic flux and energy balances in tokamak plasmas on a diffusive timescale are evaluated through the application of conservation principles to Maxwell's equations. Poloidal magnetic flux (volt-second) consumption can be partitioned into internal and dissipative components by two methods: the 'axial method' based on a magnetic flux balance and the 'Poynting method' based on a magnetic energy balance. Both require additional terms that specifically account for the poloidal flux and magnetic energy changes during magnetic reconnection derived from analysis on a magnetohydrodynamic (MHD) timescale. In experimental analyses these terms are absorbed in the inferred resistive dissipation, while in predictive analyses thay must be evaluated directly. The dissipation of poloidal flux by sawtooth activity can exceed the normal resistive dissipation when the axial method of accounting is used.

46862 (PFC/IR—87-1) Massachusetts Institute of Technology Plasma Fusion Center: 1986-1987 Report to the President. (Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center). Jul 1987. Contract AC02-78ET51013. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013518.

During the past year, technical progress has been made in all Plasma Fusion Center (PFC) research programs. The Plasma Fusion Center is recognized as one of the leading university research laboratories in the physics and engineering aspects of magnetic confinement fusion. Its research programs have produced significant results on four fronts: (a) the basic physics of high-temperature plasmas (plasma theory, RF heating, free electron lasers, development of advanced diagnostics and small-scall experiments on the Versator tokamak and Constance mirror devices), (b) major confinement results on the Alcator C tokamak, including pioneering investigations of the stability, heating, and confinement properties of plasmas at high densities, temperatures and magnetic fields, (c) operation of the medium-scale TARA tandem mirror, an axisymmetric confinement configuration with inboard thermal barriers, and (d) a broad program of fusion technology and engineering development that addresses problems in several critical subsystem areas (e.g., magnet systems, superconducting materials development, environmental and safety studies, advanced millimeter wave source development, and system studies of fusion reactor design, operation, and technology requirements).

46863 (SAIC—87/1088) Ponderomotive stabilization of external kink modes in tokamaks. D'Ippolito, D.A. (Science Applications International Corp., Boulder, CO (USA). Plasma Research Inst.). Jul 1987. Contract AC03-76ET53057. 27p. (PRI—112). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013840.

It is shown that external kink modes in tokamaks can be stabilized by applied radiofrequency (rf) waves in the ion cyclotron range of frequencies. This stabilization results from the work done by the plasma against the ponderomotive force exerted by the rf field. For a strongly evanescent surface field (such as the near field of an ion Bernstein wave coupler), the ponderomotive layer is confined to the vicinity of the plasma surface and, if sufficiently strong, influences kink stability in the same way as a close-fitting conducting wall. This effect is illustrated by deriving an analytic condition for stabilizing a single (m,n) mode in the low-beta straight tokamak model by means of a cylindrically-symmetric E/sub parallel/ rf field. The effects of poloidally or toroidally nonuniform rf fields are examined in a two-mode coupling perturbation analysis. This stabilization mechanism may be useful in extending the beta limit of ion-Bernstein-wave-heated tokamaks against both ideal and resistive modes.

46864 **(SAIC—87/1089) Two and three dimensional tokamak equilibrium modifications driven by localized ICRF [ion cyclotron range of frequencies] ponderomotive force.** Myra, J.R. (Science Applications International Corp., Boulder, CO (USA). Plasma Research Inst.). Aug 1987. Contract AC03-76ET53057. 45p. (PRI—113). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014694.

Large ponderomotive forces can occur when ICRF waves are employed in stabilization or high power heating schemes. It is shown that the MHD equilibrium of the plasma is modified when the rf antenna is localized poloidally and/or toroidally. In the 2D problem (toroidally uniform rf) a modified Grad-Shafranov equation describes ponderomotively driven magnetic surface distortions. At electric fuel strengths of interest for ICRF stabilization, the equilibrium distortions are small provided that L/sub rf/ << a and the poloidal localization of the rf is not severe. The character of the 3D problem (toroidally and poloidally varying rf) depends on whether or not the ponderomotive force couples to rational surface within the plasma. For the case without rational surfaces, the 3D component of the distortions is found to be small by 1/q/sub a/^{2} relative to the 2D component. In the case where rational surfaces are excited, magnetic islands result. A threshold condition for island overlap determines the rf electric field at which ergodicity may be expected. It is shown that ergodicity of the edge plasma may occur for some cases of interest for heating and stabilization, but should be controllable.

46865 **(UCB/ERL-M—87/18) Vortex dynamics and transport to the wall in a crossed-field plasma sheath.** Theilhaber, K.; Birdsall, C.K. (California Univ., Berkeley (USA). Electronics Research Lab.). 10 Apr 1987. Contract FG03-86ER53220. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013286.

Results of numerical simulations of the time-dependent behavior of a transversely magnetized plasma-wall sheath are presented. These simulations have been conducted with the aim of modelling plasma behavior in the vicinity of the limiters and walls of a fusion device. The two-dimensional, bounded particle simulation code "ES2" has been used as a tool for the investigation of these edge effects, in an idealized geometry which retains, however, the essential features of the physics of the edge plasma. The simulations have revealed that the bounded plasma is subject to the so-called "Kelvin-Helmholtz" instability, an instability maintained by the non-uniform electric field which is induced by the presence of the material walls. This instability is seen to saturate into large and stable vortices, with e phi/T/sub i/ ~ 1, which exist in the vicinity of the walls, and drift parallel to their surfaces. An important feature of these structures is that they continuously convect particles to the walls, at an "anomalous" rate much greater than that induced by collisional diffusion, a feature which seems tied to the mutual interaction of the vortices. In the code "ES2", volume ionization of neutrals has been modelled by a uniform electron-ion pair creation in the simulation region, and this results in a steady state, in which the linear edge instability, the nonlinear fluid dynamics of the vortices, and the nonlinear dynamics of the particles scattered by the vortices all balance each other. This steady-state but non-equilibrium configuration, which is a first model of the edge behavior induced by the boundaries, is conceptually analogous to Rayleigh-Benard convection.

46866 **(UCB/ERL-M—87/23) ES2 user's manual: Version 1.** Theilhaber, K. (California Univ., Berkeley (USA). Electronics Research Lab.). 11 May 1987. Contract FG03-86ER53220. 46p. NTIS, PC A03. File Number DE87013289.

The two-dimensional, electrostatic plasma simulation code "ES2" is described. This includes a synopsis of the physical basis of the model and a summary of the numerical schemes used to implement it. This is followed by two examples of applications, one showing the formation of unmagnetized double layers, the other illustrating the formation of vortices in a configuration perpendicular to the magnetic fields. Finally, the main section of the manual is presented: a copy of the "on-line" manual, in which a detailed description of the various options and parameters entering into ES2 is given.

46867 **(UCB/ERL-M—87/24) A relativistic Monte Carlo binary collision model for use in plasma particle simulation codes.** Procassini, R.J.; Birdsall, C.K.; Morse, E.C.; Cohen, B.I. (California Univ., Berkeley (USA). Electronics Research Lab.; Lawrence Livermore National Lab., CA (USA)). 14 May 1987. Contract FG03-86ER53220. 39p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013287.

Particle simulations of plasma physics phenomena employ far fewer particles than the systems which are being simulated, owing to the limited speed and memory capacity of even the most powerful supercomputers. If the simulation consists of point particles in a gridless domain, then the combination of the small number of particles in a Debye sphere and the possibility of zero-impact-parameters, large-angle scattering results in a significant enhancement of fluctuation phenomena such as collisions. Collisional processes in a simulation may be difficult because of disparate time scales. A comparison of the relevant physical time scales of the system that is being simulated usually yields a large range of values. For instance, the grid-cell transit time is usually several orders of magnitude smaller than the 90° scattering time. Much of the physical phenomena of interest in the simulation are due to these long-time-scale collisional processes, but short-time-scale processes (such as particle bounce times in a mirror or tokamak) must be adequately resolved if the plasma dielectric response and the plasma potential are to be accurately determined. The following paper outlines the physics and operation of the binary collision model within the electrostatic code and presents the results of computer simulations of velocity space transport which were run to test the accuracy of the model. Also discussed are the timing statistics for the collision package relative to the other major physics packages in the code, as well as recommendations on the frequency of use of the collision package within the simulation sequence.

46868 **(UCB/ERL-M—87/34) Artificial cooling due to quiet injection in bounded plasma particle simulations.** Lawson, W.S. (California Univ., Berkeley (USA). Electronics Research Lab.). 21 May 1987. Contract AS03-76ET53064. 19p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013288.

An explanation is proposed for an artificial cooling effect seen in electrostatic particle-in-cell plasma simulations. Further simulations are done which test and support the explanation.

46869 **(UCID—21123) Use of polarimetry to measure the current profile in MTX.** Nevins, W.M.; Hooper, E.B.; Bernstein, I.B. (Lawrence Livermore National Lab., CA (USA); Yale Univ., New Haven, CT (USA). Mason Lab.). 14 Jul 1987. Contract W-7405-ENG-48. 23p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013835.

It is possible in principle to measure the poloidal magnetic field profile, and hence, the profile of the plasma current measuring the change in the polarization of a sequence of microwave beams that pass through the plasma. Actual measurements of the plasma current profile would be very interesting in connection with Lower-Hybrid (or EC) current drive experiments since this would provide direct information on modification of the current profile by the application of rf power. A microwave polarimetry diagnostic on MTX as part of the microwave interferometer is being considered. This diagnostic would be constructed in collaboration with Neville Luhmann and Tony Peebles at UCLA. The diagnostic would utilize the multicord far-infrared interferometer which is designed to operate at a base wavelength of 0.185 mm. This paper reviews the understanding of the physics issues raised by this diagnostic, concurring with Luhmann and Peebles' conclusion that the polarimetry measurements would be easier at longer wavelengths. An increase of only a factor of 2 in the wavelength would make a substantial difference since the signal to be measured goes as λ^4. Hence, in this paper operation at longer wavelengths (0.337 mm and 0.447 mm) in addition to operation at 0.119 and 0.185 mm will be considered.

46870 (UCRL—15918) Compact torus studies: Final report. Morse, E.C. (California Univ., Berkeley (USA). Coll. of Engineering; Lawrence Livermore National Lab., CA (USA)). Jun 1987. Contract W-7405-ENG-48. 37p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014254.

The compact torus (CT) device has been proposed for use in some applications which are of interest in Laboratory programs in the areas of pulsed power and inertial confinement fusion. These applications involve compression and acceleration of CT plasmas. The RACE (Ring Accelerator Experiment) experimental program at Livermore has been initiated to study these applications. The work reported here involves studies of plasma physics and other aspects of these compact torus applications. The studies conducted identify specific problem areas associated with the CT device and examine these areas in some detail. This report contains studies of three particular problem areas of the CT applications. These three areas are: the general nonlinear properties of the CT as a magneto-hydrodynamic (MHD) equilibrium, particle simulation of the compression of the CT, with a focus on the non-MHD effects, and nonlinear RF interaction problems in the CT.

46871 (UCRL—96666) Experimental results from TMX-U. Correll, D.L. (Lawrence Livermore National Lab., CA (USA)). 1 Aug 1987. Contract W-7405-ENG-48. 25p. (CONF-870908—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE87014094.

From Course and workshop on physics of mirrors, reversed field pinches and compact tori; Varenna, Italy (1 Sep 1987).

This paper presents the recent results from the Tandem Mirror Experiment-Update(TMX-U). Many of these results can be divided into two major areas: (1) axial confinement and plasma potential, and (2) radial transport and total confinement (i.e., particle balance). Among the key observations to be discussed are the following: When the ion-confining potential θ/sub ic/ is small, θ/sub ic//T/sub i/ $\sim$ 1 to 2, the axial confinement time scales as the theoretical Pastukhov time. Deep thermal barriers (θ/sub b/ $\sim$ 0.7 kV, θ/sub b//T/sub e/ $\sim$ 6 to 7) have been measured, but there is no strong correlation between ion-confining potential and the thermal-barrier depth. By installing a calibrated H/sub α/ emission diagnostic to measure the ionization current, we have quantified particle balance between the ionization source current and the four plasma current channels: (1) axial losses, (2) nonambipolar radial losses, (3) ambipolar radial losses, and (4) density changes. All current channels are directly measured except for the ambipolar current, which is inferred from the particle balance equation. TMX-U operation above 1 to 3 x 10^{12} cm^{-3} is dominated by current channel (1) and below 1 x 10^{12} cm^{-3} by one or more of the remaining three channels. Central-cell particle buildup has been observed for one or two e-foldings and, within the radial core, found consistent with particle balance.

46872 (UCRL—96668) Microstability of the TMX tandem mirror experiments. Casper, T.A.; Berzins, L.V. (Lawrence Livermore National Lab., CA (USA)). 1 Aug 1987. Contract W-7405-ENG-48. 20p. (CONF-870908—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014356.

From Course and workshop on physics of mirrors, reversed field pinches and compact tori; Varenna, Italy (1 Sep 1987).

In the tandem mirror device, an efficient source of warm ions, the central cell, is available for stabilization of ion loss-cone instabilities. These instabilities previously limited ion confinement in single-cell mirror experiments. In the simple tandem mirror device, TMX, the drift cyclotron loss-cone (DCLC) mode was stabilized by plasma flow from the central cell into the end cell. However, to enhance the central-cell confinement and provide MHD stability, neutral beams were injected perpendicular to the magnetic field, which resulted in the excitation in the end cell of the Alfven ion-cyclotron (AIC) instability driven by plasma pressure and velocity distribution anisotropy. In the thermal-barrier experiment, TMX-U, the end-cell beams were injected at a 45° angle to the magnetic field to produce a sloshing-ion distribution, which is required to form the thermal barrier and the plugging potential. Ion distributions created by oblique injection were stable to the AIC mode and to the midplane (minimum magnetic field location) DCLC mode. However, an ion loss-cone instability remained at an axial location just outside the outboard peak of the sloshing-ion axial density profile, which is the density peak closest to the end wall. This mode can enhance the sloshing-ion loss rate, particularly at the lower levels of electron-cyclotron resonance heating (ECRH) used to form the thermal barrier. The stability to ion-cyclotron modes is critical to the performance of tandem mirrors and to designs for a mirror-based, high-fluence neutron source.

46873 (UCRL—96828) Results from the RACE [Ring ACceleration Experiment] Compact Torus Acceleration Experiment. Hammer, J.H.; Hartman, C.W.; Eddleman, J.L.; Kusse, B. (Lawrence Livermore National Lab., CA (USA); Cornell Univ., Ithaca, NY (USA)). Jun 1987. Contract W-7405-ENG-48. 12p. (CONF-870631—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87012176.

From 8. US symposium on compact toroid research and the 9. US/Japan workshop on compact toroids; College Park, MD, USA (4 Jun 1987).

RACE (Ring ACceleration Experiment) is a proof-of-principle experiment aimed at demonstrating acceleration of magnetically confined compact torus plasma rings to directed kinetic energies well in excess of their magnetic and thermal energies. In the course of the first year of operation the following have been observed: successful formation of rings in the RACE geometry; acceleration of rings with large forces, F/sub accelerate/ $\sim$F/sub equilibrium/ without apparent degradation of the ring structure; peak velocities of $\geq$2.5 x 10^8 cm/sec; acceleration efficiency of >30% at speeds of 1.5 x 10^8 cm/sec inferred from trajectory and capacitor bank data; kinetic to magnetic energy ratios $\sim$10 were observed. Experiments in the near future will be aimed at confirmation of the mass/energy measurements by calorimetry and direct density measurements.

46874 Effect of deuteron temperature on iron forbidden-line intensities in rf-heated tokamak plasmas. Sato, K.; Suckewer, S.; Wouters, A. (Plasma Physics Laboratory, Princeton University, P.O. Box 451, Princeton, New Jersey 08544-0451). *Physical Review [Section] A: General Physics;* **36**: No. 7, 3312-3321(1 Oct 1987).

Two line ratios, the forbidden line at 845.5 A ($2s\ ^2 2p\ ^2$P/sub 1/2/—$2s\ ^2 2p\ ^2$P/sub 3/2/) to the allowed line at 135.7 A ($2s\ ^2 2p\ ^2$P/sub 1/2/—$2s2p^2\ ^2$D/sub 3/2/) in Fe XXII and the forbidden line at 592.1 A ($2s\ ^2 2p^4\ ^3P_2$—$2s\ ^2 2p^4\ ^1D_2$) to the forbidden line at 1118.2 A ($2s\ ^2 2p^4\ ^3P_2$—$2s^2 2p^4\ ^3P_1$) in Fe XIX, have been measured as ion-temperature-sensitive line ratios during rf heating in the Princeton Large Torus. The results indicate that deuteron collisions in plasmas of high deuteron temperature have a noticeable effect on the intensity of the forbidden lines. Measured relative intensities are compared with values from level-population calculations, which include deuteron collisional excitation between the levels of the ground configuration. The agreement between the observed and calculated ratios is within 30%. A method for deuteron (or proton) temperature measurement in tokamak plasmas is discussed.

46875 Statistical closure approximations and the fluctuation-dissipation theorem for drift-wave interaction. Koniges, A.E.; Leith, C.E. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Physics of Fluids;* **30**: No. 10, 3065-3074(Oct 1987). Contract W-7405-ENG-48.

The statistical dynamics of a truncated (three-wave) model for drift-wave interaction are studied using numerical simulation in order to determine appropriate turbulence modeling approaches. The nonlinear dynamical equation is integrated for a Gaussian ensemble of initial states, and time-lag correlation functions and infinitesimal response functions are computed. The fluctuation-dissipation relation, an assumption of many statistical closure approximations, is shown to be qualitatively valid for statistical steady states of the system. Guided by the ensemble results, a Markovian turbulence model is selected and investigated.

46876 Congruent reduction in geometric optics and mode conversion. Friedland, L.; Kaufman, A.N. (Lawrence Berkeley Laboratory and Physics Department, University of California, Berkeley, California 94720). *Physics of Fluids;* **30**: No. 10, 3050-3058(Oct 1987). Contract AC03-76SF00098.

Standard eikonal theory reduces, to N = 1, the order of the system of equations underlying wave propagation in inhomogen-

eous plasmas. The condition for this remarkable reducibility is that only one eigenvalue of the unreduced N x N dispersion matrix D(k,x) vanishes at a time. If, in contrast, two or more eigenvalues of D become simultaneously small, the geometric optics reduction scheme becomes singular. These regions are associated with linear mode conversion and are described by higher-order systems. A new reduction scheme is developed based on congruent transformations of D, and it is shown that, in degenerate regions, a partial reduction of order is still possible. The method comprises a constructive step-by-step procedure, which, in the most frequent (doubly degenerate) case, yields a second-order system, describing the pairwise mode conversion problem in four-dimensional plasmas. This N = 2 case is considered in detail, and dimensionality arguments are used in studying the characteristic ordering of the elements of the reduced dispersion tensor in mode conversion regions. The congruent reduction procedure is illustrated by classifying pairwise degeneracies in cold multispecies magnetized plasmas.

46877 **Collective effects on equilibria of trapped charged plasmas.** Turner, L. (Los Alamos National Laboratory, University of California, Los Alamos, New Mexico 87545). *Physics of Fluids;* **30**: No. 10, 3196-3203(Oct 1987).

A fluid model is used to study analytically the equilibria of charged plasma in traps. Several geometries are explored: a one-dimensional slab equilibrium of a finite-temperature plasma mechanically confined by two plates that are externally maintained at fixed potentials, and both spherical as well as spheroidal equilibria of a zero-temperature plasma confined in traps distorted from the standard Penning-trap configuration by virtue of the multipole moments of the trapped plasma. Although this study was motivated by the necessity of understanding possible collective effects in charged-plasma traps for the design and future diagnosis of the ambitious antiproton-gravity experiment being undertaken by the Los Alamos Collaboration [Proceedings of the Second Conference on the Intersections between Particle and Nuclear Physics (American Institute of Physics, New York, 1986), AIP Pub. No. 150, p.

46878 **Hamiltonian four-field model for nonlinear tokamak dynamics.** Hazeltine, R.D.; Hsu, C.T.; Morrison, P.J. (Institute for Fusion Studies and Department of Physics, University of Texas at Austin, Austin, Texas 78712). *Physics of Fluids;* **30**: No. 10, 3204-3211(Oct 1987).

The Hamiltonian four-field model is a simplified description of nonlinear tokamak dynamics that allows for finite ion Larmor radius physics, as well as other effects related to compressibility and electron adiabaticity. Much simpler than some previous descriptions of the same physics, it still preserves essential features of the underlying exact dynamics. In particular, because it is a Hamiltonian dynamical system it conserves the appropriate Casimir invariants, as well as avoiding implicit, unphysical dissipation. Here the model is derived and interpreted, its Hamiltonian nature is demonstrated, and its constants of motion are extracted.

46879 **Evolution of a decaying spheromak.** Sgro, A.G.; Mirin, A.A.; Marklin, G. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physics of Fluids;* **30**: No. 10, 3219-3236(Oct 1987).

The evolution of a low beta spheromak initially in a two-dimensional stable equilibrium having a constant J/B (the so-called minimum energy state) is calculated within the context of resistive magnetohydrodynamics. Since the initial equilibrium is stable, the spheromak at first resistively evolves through a sequence of stable quasiequilibria. This phase of the evolution is calculated with a transport code in which the resistivity is assumed to be largest at the wall and lowest at the magnetic axis. Resistive diffusion causes the safety factor q to decrease everywhere while decreasing fastest near the wall. The quasiequilibria through which the spheromak evolves are tested for stability with both an ideal linear stability code and a resistive one. The results of both stability codes are in basic agreement and show that when q drops to below (1)/(2) everywhere the spheromak becomes unstable to an n = 2 mode. The agreement of the stability codes implies that the unstable mode is a resistively modified ideal mode. The unstable equilibrium is used as the initial

46880 **Linear and nonlinear description of drift instabilities in a high-beta plasma.** Aydemir, A.Y.; Berk, H.L.; Mirnov, V.; Pogutse, O.P.; Rosenbluth, M.N. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712). *Physics of Fluids;* **30**: No. 10, 3083-3092(Oct 1987).

A nonlinear system of equations is derived for drift waves in a high-beta plasma ($\beta >> 1$). The magnetic field pressure is taken small compared to the particle pressure. Pressure balance is established by having a uniform particle pressure with the density and temperature gradients in opposite directions. The primary purpose of the magnetic field is to inhibit radial heat flux. This is the principle of such plasma fusion systems as the wall sustained multiple mirror, compressed liner, and magnetic-insulated inertial fusion, where the heat is contained over a relatively short radial scale length and a long axial scale length. The nonlinear equations for the mathematical model contain drift instabilities that give rise to radial heat and particle fluxes that can enhance the losses expected from classical collisional effects. The linear and nonlinear evolution of the model is studied here.

46881 **Stimulated Raman scattering in self-focused light filaments in laser-produced plasmas.** Short, R.W.; Seka, W.; Bahr, R. (Laboratory for Laser Energetics, University of Rochester, Rochester, New York 14623-1299). *Physics of Fluids;* **30**: No. 10, 3245-3251(Oct 1987).

The stimulated Raman scattering instability is treated for laser light propagating through a plasma in a self-focused filament. It is shown that self-focusing of hot spots in the incident laser beam can greatly enhance the growth rate of the instability. This result may help to explain experimental observations of Raman scattering at nominal incident intensities well below the theoretical threshold, and may also account for an anomalous spectral structure that has been observed at low intensities.

46882 **Brillouin scattering measurements from plasmas irradiated with spatially and temporally incoherent laser light.** Mostovych, A.N.; Obenschain, S.P.; Gardner, J.H.; Grun, J.; Kearney, K.J.; Manka, C.K.; McLean, E.A.; Pawley, C.J. (Laser Plasma Branch, Plasma Physics Division, Naval Research Laboratory, Washington, DC 20375). *Physical Review Letters;* **59**: No. 11, 1193-1196(14 Sep 1987).

Stimulated Brillouin scattering spectra have been measured from plasmas produced by spatially and temporally incoherent laser light. The measured backscatter spectra and intensities differ substantially from measurements of Brillouin scattering with coherent illumination. Backscatter is strongly suppressed and the Brillouin signature in the spectra disappears. This quenching of stimulated Brillouin scattering is observed even when the laser coherence time is much larger (10 x) than the predicted convective saturation time of the stimulated Brillouin scattering instability.

46883 **Study of directly launched ion Bernstein waves in a tokamak.** Takase, Y.; Moody, J.D.; Fiore, C.L.; McDermott, F.S.; Porkolab, M.; Squire, J. (Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physical Review Letters;* **59**: No. 11, 1201-1204(14 Sep 1987).

Excitation, propagation, and absorption of directly launched ion Bernstein waves were studied with CO_2 laser scattering in the Alcator C tokamak. Optimum excitation is obtained when an ion-cyclotron harmonic layer is located just behind the antenna. Wave absorption at the $\omega = 3\Omega$/sub D/ $= 1.5\Omega$/sub H/ layer was observed. 3 It may be necessary to control the edge density fluctuation level in order to minimize scattering of the ion Bernstein waves and optimize heating.

46884 **Electromagnetic direct implicit plasma simulation.** Hewett, D.W.; Langdon, A.B. (Physics Department, Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *Journal of Computational Physics;* **72**: No. 1, 121-155(Sep 1987). Contract W-7405-ENG-48.

A 2D electromagnetic version of the direct implicit PIC algorithm has been developed and implemented in the new code

AVANTI. The code has been tested on electron beam filamentation and magnetic reconnection problems and has fulfilled most of the promise of implicit PIC. It runs stably with an arbitrarily large time step and is quite robust with respect to large particle fluctuations that result when plasmas are represented with small numbers of particles per cell N/sub c/. Several numerical obstacles were overcome during the development of the AVANTI. A method of determining the implicit susceptibility chi is described which allows the code to avoid a nonlinear instability associated with small N/sub c/. We find a form of "simplified differencing" that provides a very robust algorithm without need for explicit smoothing. Another hurdle is the solution of the EM field equations. If the collisionless skin depth is not well resolved in high density regions, the terms containing the tensor chi dominate the E field equation and strongly couple the components. This strong coupling is handled by simultaneous solution of these equations: generalizing to simultaneous splitting in 2D. In regions where the skin depth is well resolved, terms associated with purely electromagnetic waves dominate but do not fit symmetrically into the simultaneous splitting scheme. Introducing the electrostatic potential, the troublesome asymmetric electrostatic part of E cancels but requires a fourth equation for phi to be solved simultaneously along with the three E components. Finally, extension and generalization of the conventional explicit PIC divergence correction step, necessary to maintain Gauss' law, is needed.

46885 Gyrokinetic particle simulation model. Lee, W.W. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Journal of Computational Physics;* **72**: No. 1, 243-269(Sep 1987).

A new type of particle simulation model based on the gyrophase-averaged Vlasov and Poisson equations is presented. The reduced system, in which particle gyrations are removed from the equations of motion while the finite Larmor radius effects are still preserved, is most suitable for studying low frequency microinstabilities in magnetized plasmas. The resulting gyrokinetic plasma is intrinsically quasineutral for λ/sub D/<<rho/sub s/ (equivalentrho/sub i/(T/sub e//T/sub i/)/sup 1/2/). Thus, without the troublesome space charge waves in the simulation, we can afford to use much larger time steps (ω/sub H/ Δtapprox. <1) and grid spacings (Δx/sub perpendicular//rho/sub s/approx. <1) at a much reduced noise level than we would have for conventional particle codes, where ω/sub H/equivalent(k/sub parallel//k/sub perpendicular/)(λ/sub D//rho/sub s/)ω/sub p//sub e/, and k/sub parallel/<<k/sub perpendicular/. Furthermore, it is feasible to simulate an elongated system (L/sub parallel/>>L/sub perpendicular/) with a three-dimensional grid using the present model without resorting to the usual mode expansion technique, since there is essentially no restriction on the size of Δx/sub parallel/ in a gyrokinetic plasma. The new approach also enables us to further separate the time and spatial scales of the simulation from those associated with global transport through the use of multiple spatial scale expansion.

46886 Enhanced stability and neutron production in a dense Z-pinch plasma formed from a frozen deuterium fiber. Sethian, J.D.; Robson, A.E.; Gerber, K.A.; DeSilva, A.W. (U. S. Naval Research Laboratory, Washington, D.C. 20375-5000). *Physical Review Letters;* **59**: No. 8, 892-895(24 Aug 1987).

We have formed dense Z pinches from frozen deuterium fibers ranging in diameter from 80 to 125 μm and at peak currents of up to 640 kA. The pinch remains stable for the entire 130 nsec of the current rise. This anomalously long stable period corresponds to about 100 MHD growth times. As soon as the current peaks, i.e., when dI/dt = 0, the pinch goes rapidly m = 0 unstable and produces nearly 10/sup 12/ neutrons in a 30—60-nsec-wide pulse. The instability occurs only at dI/dt = 0 and is independent of either the current magnitude or the time to peak.

46887 Mechanism for rapid sawtooth crashes in tokamaks. Aydemir, A.Y. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712). *Physical Review Letters;* **59**: No. 6, 649-652(10 Aug 1987).

The standard picture of Kadomtsev reconnection process predicts sawtooth crash times that are longer than those observed in the present day large tokamaks. Ideal kink modes are investigated as a possible mechanism for these fast crashes, by use of fully toroidal, compressible, full magnetohydrodynamic equations. In systems with low shear, parallel-current and pressure-driven modes are identified well below the previously accepted poloidal beta limits. Linear and nonlinear calculations show good agreement with experiments and indicate that such modes may explain fast collapse times reported in the recent literature.

46888 Anomalous temperature equilibria due to E x B drive. Mc Nally, J.R. Jr. *Fusion Technology;* **12**: No. 1, 166-169(Jul 1987).

The effect of E x B drive on enhancing ion temperature excursions in cylindrical or polar coordinates is discussed. Topics considered in this article include plasma engineering, thermal equilibrium, plasma diagnostics, and current-drive heating.

46889 Atomic data for highly charged ions. Applications to X-ray laser design and thermonuclear fusion. Younger, S.M. (Lawrence Livermore National Lab., CA). *Nuclear Instruments and Methods in Physics Research, Section B: Beam Interactions with Materials and Atoms;* **24/25**: No. 1, 373-376(Apr 1987). (CONF-861114—).

From 9. international conference on application of accelerators in research and industry; Denton, TX, USA (10 Nov 1986).

A detailed understanding of a myriad of atomic processes is proving important for the development of short wavelength lasers and to the achievement of controlled thermonuclear fusion. A brief overview of some X-ray laser design issues is presented along with a discussion of relevant atomic data needs. Special attention is given to the need for experimental verification of rate coefficient data which are important for determining laser kinetics. Approaches to magnetic and inertial confinement fusion are reviewed with emphasis on atomic processes affecting both fuel burn and plasma diagnostics. Recent advances in the development of high power ICF drivers, both lasers and particle beams, are shown to suggest new areas of research involving very highly charged ions in dense hot plasmas.

46890 Initial results from the DIII-D tokamak. Luxon, J.; Anderson, P.; Batty, F. (GA Technologies, Inc., San Diego, CA; Oak Ridge National Lab., TN). pp vp of Plasma physics and controlled nuclear fusion research 1986. Proceedings of the eleventh international conference on plasma physics and controlled nuclear fusion research held in Kyoto, 13-20 November 1986. Vienna, Austria; IAEA (1987). (CONF-861106—).

From IAEA international conference on plasma physics and controlled nuclear fusion research; Kyoto, Japan (12 Nov 1986).

The DIII-D tokamak was designed to exploit both (a) the strong dependence of limiting beta values and plasma energy confinement on high current, and (b) the effectiveness of the divertor configuration in obtaining good confinement. Initial operation of the device has resulted in Ohmic confinement (tau approx.= 150 ms) comparable to that of other large tokamaks and in low levels of plasma impurities (Z/sub eff/=1.5 at n-bar/sub e/=6×10^{19}m^{-3}). Both single null divertor and elongated dee shaped limiter plasmas have been produced. The paper reports both attaining H-mode confinement during beam heating of plasmas in open divertor configurations and values of the Troyon scaling quantity (I/aB approx.= 2) large enough to allow future studies of beta limits in regimes heretofore unattainable. 7 references, 6 figures, 1 table.

46891 Pellet injection results during TFTR Ohmic and neutral beam heating experiments. Schmidt, G.L.; Arunasalam, V.; Milora, S.L. (Princeton Univ., NJ; Oak Ridge National Lab., TN). pp vp of Plasma physics and controlled nuclear fusion research 1986. Proceedings of the eleventh international conference on plasma physics and controlled nuclear fusion research held in Kyoto, 13-20 November 1986. Vienna, Austria; IAEA (1987). (CONF-861106—).

From IAEA international conference on plasma physics and controlled nuclear fusion research; Kyoto, Japan (12 Nov 1986).

In Ohmic discharges, pellet injection experiments on TFTR have increased density limits and energy confinement. Injecting multiple pellets sustains the improved confinement and increases the central density and peaked character of the profile, producing sig-

nificant increases in n/sub e/(O)tau/sub E/(a). A value of (1.4 +- 0.3)x$10^{20}m^{-3}$center dots has been achieved at a central electron temperature of 1.4 keV. Decay of the central density for strongly peaked profiles in Ohmic discharges is consistent with central particle diffusion coefficients of 0.1 m^2/s and flow velocities on the order of neoclassical velocities. Concentrations of scandium injected following pellet injection (n/sub Sc//n/sub e/) exhibit an extended rise time and then remain roughly constant during the subsequent slow decay of the electron density. In pellet-fueled discharges heated by tangential neutral beams at high density, heating profiles vary from a flat radial shape to a profile that is peaked near the q=2 radius. Global confinement is comparable to that obtained in gas-fueled discharges with similar total input power but with heating profiles more strongly peaked on axis. Central confinement in pellet-fueled discharges exceeds values obtained in gas-fueled discharges. 11 references, 4 figures.

46892 **Recent advances in the theory and modelling of RF heating in inhomogeneous plasmas.** Swanson, D.G.; Cho, S.; Phillips, C.K.; Hwang, D.Q.; Houlberg, W.; Hively, L. (Auburn Univ., AL; Princeton Univ., NJ; California Univ., Davis; Oak Ridge National Lab., TN). pp vp of Plasma physics and controlled nuclear fusion research 1986. Proceedings of the eleventh international conference on plasma physics and controlled nuclear fusion research held in Kyoto, 13-20 November 1986. Vienna, Austria; IAEA (1987). (CONF-861106—).

From IAEA international conference on plasma physics and controlled nuclear fusion research; Kyoto, Japan (12 Nov 1986).

Theoretical and numerical modelling of rf heating in inhomogeneous plasmas is discussed. (1) A case is examined near the lower hybrid resonance where two turning points are encountered near one another, first from a cold to a warm wave and then from the warm wave to an ion Bernstein mode. This leads to a sixth order equation which is difficult to solve as it has a quadratic coefficient. (2) Improved a symptotic representations are presented whose accuracy is crucial to the numerical solution of this type of equation. (3) A new method of exact order reduction for higher order equations with no approximations permits generation of a numerical Green function by integrating only second order equations. The differential equation is factored with an asymptotically small source term. The resulting integral equation is more easily solved. (4) A formalism for determining the 2-D structure of the wave fields and the associated power deposition profiles within the mode conversion-absorption layer has been developed by applying the parabolic approximation method to the linearized Vlasov-Maxwell equations. The new method reduces the problem to the solution of one fourth order equation and an associated parabolic diffusion type equation. (5) Time dependent transport simulations of ICRF heated discharges in tokamaks with circular and non-circular cross-sections are presented. The simulations are obtained by interfacing the WHIST 2-D MHD equilibrium and a 1-D flux surface averaged transport code with a ray tracing algorithm. 11 references, 2 figures.

46893 **Drift wave models of tokamak confinement.** Waltz, R.E.; Dominguez, R.R.; Wong, S.K.; Diamond, P.H.; Hahm, T.S.; Mattor, N.; Lee, G.S. (GA Technologies, Inc., San Diego, CA; JAYCOR, San Diego, CA; Texas Univ., Austin; Oak Ridge National Lab., TN). pp vp of Plasma physics and controlled nuclear fusion research 1986. Proceedings of the eleventh international conference on plasma physics and controlled nuclear fusion research held in Kyoto, 13-20 November 1986. Vienna, Austria; IAEA (1987). (CONF-861106—).

From IAEA international conference on plasma physics and controlled nuclear fusion research; Kyoto, Japan (12 Nov 1986).

Drift wave models are used to explain the observed tokamak confinement scaling with density, power, size and magnetic field. Some additional edge mechanism is required to obtain the observed scaling with safety factor and to account for H-mode transitions. 11 references, 2 figures.

46894 **Computational methods for kinetic models of magnetically confined plasmas.** Killeeen, J.; Kerbel, G.D.; Mc Coy, M.G.; Mirin, A.A. New York, NY; Springer-Verlag New York Inc. (1986). 199p. Springer-Verlag New York Inc., 175 Fifth Ave., New York, NY 10010.

In this book authors present various types of nonlinear Fokker-Planck equations which require solution for the realistic computer simulation of magnetically confined plasmas. They present detailed mathematical arguements leading to numerically tractable simplifications and provide examples and applications bearing directly on the most recent technology in plasma research.

46895 **Numerical simulations of plasmas.** Dnestrovskii, Y.N.; Kostomarov, D.P. New York, NY; Springer-Verlag New York Inc. (1986). 304p. Springer-Verlag New York Inc., 175 Fifth Ave., New York, NY 10010.

This book presents a modern, consistent, and systematic development of numerical computer simulation of plasmas in controlled thermonuclear fusion. The authors focus on recent Soviet research in mathematical modeling of Tokomak plasmas and present kinetic hydrodynamic and transport models.

46896 **TuFF4. Half-integer harmonic emission from laser plasmas as a coronal temperature diagnostic.** Seka, W.; Short, R.W.; Goldman, L.M.; Letzring, S.; Richardson, M.C.; Soures, J.M.; Tanaka, K.; Craxton, R.S.; Delettrez, J.; Boni, R.; Quick, D. (Univ. of Rochester, NY). *Journal of the Optical Society of America B: Optical Physics;* **1**: No. 3, vp(Jun 1984).

Light emission at $omega_0/2$ and $3omega_0/2$ from laser plasmas has long been observed and associated principally with the 2omega/sub rho/ decay instability at n/sub c//4. Various theories have been developed to explain the spectra of this emission, which exhibits generally broad double-line features with a temperature-dependent splitting. Recent $omega_0/2$ spectra have, however, clearly shown additional features. Spherical target experiments with overlapping beams for optimum illumination uniformity are expected to exhibit more one-dimensional plasma blow-off behavior. Thus, predictions from one-dimensional theories adapted to spherical geometry should be applicable. The authors have tested this hypothesis on OMEGA with six overlapping UV (351-nm) beams on spherical targets. From these experiments the authors conclude that a much more one-dimensional plasma corona is indeed observed. However, the $3omega_0/2$ spectra observed under these conditions hardly lend themselves to quantitative coronal temperature diagnosis owing to the complex averaging of the spectra over the various angles of incidence on the spherical target surface as well as the various angles of emission with respect to the incident light. In contrast, the $omega_0/2$ spectra show a somewhat more complex structure, one component of which is well suited to coronal temperature diagnosis.

46897 **Summary abstract: measurement of impurities in a neutral beam by laser induced fluorescence.** Burrell, C.F.; Schlachter, A.S.; Pyle, R.V.; Searle, C.E. (Lawrence Berkeley Lab., CA). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **2**: No. 2, 708-709(Apr-Jun 1984). Contract AC03-76SF00098.

One objective of fusion research is to reduce the level of heavy impurity ions in magnetically confined plasmas. They cool the plasma by line radiation and serve as a target for electron capture by H^0 and D^0 beams prior to plasma penetration, thus preventing effective heating of the plasma. Impurity atoms injected along with the neutral beam of H^0 and D^0 used for heating and fueling the plasma are of particular concern because they are energetic and would penetrate into the plasma. A noninterfering, on-line diagnostic for detection of impurity atoms present in neutral hydrogen beams, by means of laser induced fluorescence (LIF) is described here.

From USDOE/Japan workshop Q52 plasma wall interaction data needs - critical to a burning core experiment (BCX); Livermore, CA, USA (24 Jun 1985).

The Division of Development and Technology has sponsored a four day US-Japan workshop "Plasma-Wall Interaction Data Needs Critical to a Burning Core Experiment (BCX)", held at Sandia National Laboratories, Livermore, California on June 24 to 27, 1985. The workshop, which brought together fifty scientists and engineers from the United States, Japan, Germany, and Canada, considered the plasma-material interaction and high heat flux (PMI/HHF) issues for the next generation of magnetic fusion energy devices, the Burning Core Experiment (BCX). Materials options were ranked, and a strategy for future PMI/HHF research was formulated. The foundation for international collaboration and coordination of this research was also established. This volume contains the first two of the five technical sessions. The first one being the BCX overview, the second on the BCX candidate materials. The remaining three sessions in volume two are on the plasma materials interaction issues, research facilities and small working group meeting on graphite, beryllium, advanced materials and future collaborations.

From TIBER meetings; Livermore, CA, USA (6 Apr 1987).

This series of vugraphs describes the design goals of a computer code that will be used in designing the Engineering Test Reactor (ETR). (JDH)

46902 **(CONF-8704183—1-Vugraphs) World Stellarator Program.** Lyon, J.F. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 35p. NTIS, PC A03. File Number DE87009124.

From 4. TWP meeting; Naka, Japan (13 Apr 1987).

This report investigates the development of stellarator programs around the world. Some topics included are: the comparisons of stellarators and tokamaks, present understanding of stellarators, near-term stellarator program, next generation facilities and international cooperation programs. (LSP)

46903 **(CONF-8706184—1-Vugraphs) Fueling systems.** Gorker, G.E. (Oak Ridge National Lab., TN (USA); Grumman Aerospace Corp., Bethpage, NY (USA)). 1987. Contract AC05-84OR21400. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013546.

From TIBER II review meeting; Oak Ridge, TN, USA (16 Jun 1987).

This report deals with concepts of the Tiber II tokamak reactor fueling systems. Contained in this report are the fuel injection requirement data, startup fueling requirements, intermediate range fueling requirements, power range fueling requirements and research and development considerations. (LSR)

46904 **(CONF-8706184—2-Vugraphs) TF & PF magnet power conversion.** Gorker, G.E. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013547.

From TIBER II review meeting; Oak Ridge, TN, USA (16 Jun 1987).

This paper contains a collection of data on the Tiber II Tokamak reactors magnet power conversion. The collection of data consists of: TF coil power conversion and protection system requirements and design data, TF power conversion cost estimates, PF coil power supply data and other Tiber systems data and circuit diagram presentations.

46905 **(DOE/DP/40200—38-Vol.29) LLE [Laboratory for Laser Energetics] review: Quarterly report, October-December 1986.** Delettrez, J. (ed.). (Rochester Univ., NY (USA). Lab. for Laser Energetics). 1986. Contract FC08-85DP40200. 56p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014468.

This volume of the LLE Review contains an analysis of the effect of laser illumination nonuniformity on the analysis of transport experiments; a review of measurements carried out with a high-resolution XUV spectrometer; a study of shock launching in silicon crystals; measurements of thermal conductivity in dielectric thin films; and the National Laser Users Facility activities for this period. Finally, the laser activities on GDL and OMEGA are summarized. The following are highlights of the research reports contained in this issue: (1) A method has been developed to study from simulations the effect of laser illumination nonuniformity on the interpretation of the transport experiments carried out with the 24 uv beams of OMEGA. (2) A high-resolution extreme uv spectrograph was used to study relativistic and quantum electrodynamic effects in high atomic number elements, to measure conditions in the coronal plasma, and to diagnose transitions in x-ray laser research. (3) The temporal variation of lattice spacing due to shocks launched into laser-irradiated silicon crystals was studied by Bragg x-ray diffractometry with pulsed x rays. (4) A method has been developed for measuring the thermal conductivity of dielectric materials in thin-film form. (5) A 25th beam from the output of the GDL active mirror laser system has been focused onto a target in the OMEGA chamber.

46906 **(DOE/DP/40200—53) Enhanced noise and Raman scattering in plasma.** Simon, A.; Short, R.W. (Rochester Univ., NY (USA). Lab. for Laser Energetics). Apr 1987. Contract FC08-85DP40200. 9p. (CONF-8704170—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014466.

From International conference on plasma physics; Kiev, USSR (6 Apr 1987).

Observations of Raman scattering from laser-produced plasma have shown a number of puzzling features. These can be explained by assuming the presence of a bump-on-tail electron distribution created by pulses of fast electrons arising from instabilities at the critical (n/sub c/) or the quarter-critical (n/sub c//4) surface. Experiments using thin foils, in which the target density drops below n/sub c/ and even n/sub c//4 early in the laser pulse, have continued to show the same agreement as is seen for thick targets between the observed Raman spectrum and the predictions of this theory. This raises the issue of the time scale on which such directed pulses of fast electrons can continue to exist in the plasma after their source at n/sub c/ or n/sub c//4 disappears. We show that the classical degradation process is quite slow (of the order of 100 ps or more). Collective processes would appear to broaden and flatten the beam on a faster time scale. However, inclusion of finite spatial size strongly reduces the effect. Furthermore, we will show that broadening of the beam has little effect on the predicted spectrum.

46907 **(DOE/ER/52128—1) Fusion reactor physics and technology studies: Final report, December 1, 1985 to June 15, 1986.** Kulcinski, G.L.; Emmert, G.A.; Santarius, J.F.; Sviatoslavsky, I.N. (Wisconsin Univ., Madison (USA). Fusion Technology Inst.). Sep 1986. Contract FG02-86ER52128. 79p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87013691.

The work performed for "Fusion Reactor Physics and Technology Studies" was to participate with Lawrence Livermore National Laboratory (LLNL) and others in the design of the Minimars Tandem Mirror power reactor. This design activity was a collaborative effort with LLNL being responsible for the physics and program administration. The Fusion Technology Institute (FTI) of the University of Wisconsin was responsible for nuclear technology (central cell blanket/reflector/shield design, neutronics, activation, tritium issues, and end cell shielding), and the design of the central cell magnets. In addition, FTI provided assistance to LLNL on the plasma physics modeling of the plasma halo. An interim report on the Minimars design has been issued, and a final report covering all aspects of Minimars is in press. In addition, various reports and conference papers covering aspects of the design have been issued, and are listed in this report. A summary of the FTI contribution to the Minimars design study is presented.

46908 **(GA-A—18161) Fabrication of the new poloidal field coils for DIII-D.** Heiberger, M.; Bott, R.J.; Gallix, R.; Street, R.W. (GA Technologies, Inc., San Diego, CA (USA)). Dec 1985. Contract AC03-84ER51044. 7p. (CONF-851102—119). NTIS, PC A02. File Number DE87013379.

From 11. symposium on engineering problems in fusion research; Austin, TX, USA (18 Nov 1985).

The six new poloidal field coil assemblies manufactured by GA Technologies (GA) for DIII-D range in diameter from 3.4 to 5.3 m. Two of them are 55-turn field shaping coils. Each of the other four combines one turn of the ohmic heating coil and a 55-turn field shaping coil into a single unit encased in a stainless steel box beam. These four box beams, which provide support for the coils inside, are part of the overall coil and vacuum vessel support structure. They also serve as molds for vacuum impregnating the coils with epoxy. All coils are made of hollow, water-cooled copper conductor. The larger field shaping coils are designed for 20 kA, 3 sec rectangular current pulses with 40°C temperature rise. The ohmic heating coil turns are capable of currents of up to 110 kA. The conductor is wrapped with Kapton and fiberglass tape; Kapton provides 1000 V/turn and 28 kV coil-to-ground insulation. The fiberglass acts as wick and reinforcement for the vacuum impregnated epoxy resin which bonds the coil together. The fabrication process is described in detail and illustrated. Critical operations were: manufacturing of the large box beams and molds, braze joining the conductor lengths and fittings, correctly placing the Kapton insulation, completing the mold and vacuum impregnation, and fitting the overwrapped coil with leads and water fittings in its mold (or box beam). Tools and setups used for special operations such as induction brazing, conductor winding, conductor bending, and vacuum impregnation are presented. The quality control procedures followed to guarantee sound brazed joints are explained. The electrical tests performed at several stages of fabrication, especially the 1000 V/turn impulse tests conducted before potting to facilitate fault detection and repair, are described.

46909 **(GA-A—18862) DIII-D timing system.** Bramson, G. (GA Technologies, Inc., San Diego, CA (USA)). May 1987. Contract AC03-84ER51044. 23p. (CONF-870552—21). NTIS, PC A02/MF A01; GPO Dep. File Number DE87012037.

From 5. conference on real-time computer applications in nuclear, particle, and plasma physics; San Francisco, CA, USA (11 May 1987).

The DIII-D tokamak, an upgrade of Doublet III, a device to study magnetic confinement fusion at GA Technologies, became operational in February 1986. The new timing system consists of two major subsystems. The trigger subsystem synchronizes control and data acquisition for the experiment. The clock subsystem is a centralized source of pulses for data acquisition equipment. The CAMAC hardware and the database software for the DIII-D timing system is discussed.

46910 **(GA-A—18923) Numerical simulation of tokamaks: Ideal MHD [magnetohydrodynamics] equilibrium and stability.** Helton, F.J. (GA Technologies, Inc., San Diego, CA (USA)). Jul 1987. Contract AC03-84ER53158. 9p. (CONF-870947—4). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013452.

From 12. conference on the numerical simulation of plasmas; San Francisco, CA, USA (20 Sep 1987).

Great improvements have been made in numerical techniques, and in the processing speed and storage capacity of new supercomputers. The advent of supercomputers has brought about a revolution in fields which deal with physical phenomena that are amenable to numerical solution. The technique of computer simulation has allowed many previously inaccessible phenomena to be studied and has been especially valuable for applications in areas for which experimentation is either impossible or expensive, for example building tokamaks. Given the physics objectives of the tokamak and the economic and engineering constraints of the design, then, using the appropriate realistic numerical simulation techniques, an engineering design can be decided. However, the unrealistic, hence incorrect, use of powerful numerical simulations can easily lead to tokamak designs that will not be viable. In this paper remarks will be addressed only to the question of numerical simulation done for design purposes, clearly such remarks do not apply to theoretical studies in which theoretical (not necessarily realizable limits) are the major interest.

46911 **(HEDL-SA—3496-FP) Prospects for reduced activation alloys.** Doran, D.G.; Mann, F.M.; Rowcliffe, A.F. (Hanford Engineering Development Lab., Richland, WA (USA); Oak Ridge National Lab., TN (USA)). Apr 1986. Contract AC06-76FF02170. 7p. (CONF-860421—80). Elsevier Sci. Publ., B.V., 52 Vanderbilt Ave., New York, NY 10017. File Number TI87014368.

From 2. international conference on fusion reactor materials (ICFRM-2); Chicago, IL, USA (13 Apr 1986).

The purpose of this paper is to describe the framework within which the development of alloys exhibiting reduced activation is being pursued in the US and to survey the current status and future prospects of this effort. The goal is to reduce activation to a level precluding the need for geologic disposal in order to help make fusion power environmentally and economically attractive. Initial efforts at reducing activation are aimed at replacing problem elements - especially Nb, Mo, and Ni - with more benign elements in analogues of structural alloys such as Ti-modified 316 stainless steel, the ferritic/martensitic steels containing 9 to 12% Cr, and the lower Cr (2%) ferritic/bainitic steels. The intrinsically low activation vanadium alloys are also under study; these are not common structural materials, so a data base is only slowly accumulating. Al-

though this work is at an early stage, it provides evidence for optimism that the goal can be met.

46912 **(HEDL-SA—3516) Effects of neutron irradiation to 63 dpa on the properties of various commercial copper alloys.** Brager, H.R. (Hanford Engineering Development Lab., Richland, WA (USA)). Apr 1985. Contract AC06-76FF02170. 15p. (CONF-860421—78). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011714.

From 2. international conference on fusion reactor materials (ICFRM-2); Chicago, IL, USA (13 Apr 1986).

High purity copper and six commercial copper alloys were neutron irradiated to 47 and 63 dpa at about 450°C in the FFTF. Immersion density measurements showed a wide range of swelling behavior after irradiation to 63 dpa. At one extreme was CuBe in the aged and tempered (AT) condition which had densified slightly. At the other extreme was 20% CW Cu-0.1% Ag which swelled over 45%. Electrical resistivity measurements followed trends similar to previously published results for the same alloys irradiated to 16 dpa: a continued change in conductivity with fluence which appears to relate to void formation, transmutation products and coarsening of second phase precipitates. These results were compared with electrical conductivity of unirradiated alloys examined after aging for 10,000 hours. The most irradiation resistant high-conductivity copper alloys examined after 63 dpa are A125 and MZC. Cu-2.0Be, only a moderate-conductivity alloy, exhibits very consistent irradiation resistant properties.

46913 **(IPPJ-DT—132) Carbon film and its applications.** (Nagoya Univ. (Japan). Inst. of Plasma Physics). Oct 1986. 43p. (In Japanese). (CONF-8602136—1). NTIS (US Sales Only), PC A03/MF A01. File Number DE87702942.

From Workshop on carbon coating; Wako, Japan (14 Feb 1986).

Diamond like carbon was prepared by the decomposition of methane in a microwave discharge. The effect of dilution gases, such as hydrogen, argon and helium, on the deposition was examined in the light of the identification of the deposits and the results of plasma diagnostics. When hydrogen was added, diamond like particles including large amounts of hydrogen were obtained. Diamond like films including graphitic carbon and a smaller amount of hydrogen were deposited from the methane-argon plasma. The correlation between the deposit and species present in the plasma is discussed. The deposition of diamond like carbon not including graphitic carbon from the methane-hydrogen plasma was succeeded because of the formation of CH/sub 3/ radicals having sp/sup 3/ hybrid orbital of carbon for diamond formation from the plasma and a removal of graphitic carbon from the deposit by sputtering.

46914 **(NAC—85-01) Calculations to obtain approximate field settings for the injection elements for given sector magnet field settings.** Rohwer, P.F.; Schneider, S. (Council for Scientific and Industrial Research, Faure (South Africa). National Accelerator Centre). 1985. 12p. CSIR, National Accelerator Centre, P.O. Box 72, Faure, 7131, South Africa.

Magnetic field measurements in the sector magnets will be carried out with the central region i.e. bending magnet 1 (BM1), bending magnet 2 (BM2) - and later possibly the magnetic inflection channel (MIC) - as well as the diagnostic equipment in position. In order to make realistic evaluations of these measurements, the flux densities in the injection elements have to correspond to the flux densities in the sector magnets. There is a definite relationship between the magnetic field setting of the injection elements and that of the sector magnets. The flux densities required for the six fieldsettings of the sector magnets at which the measurements will be carried out, is then calculated.

46915 (NP—7900797, pp 24-26) **Analysis of the FNS streaming experiment with albedo Monte Carlo method.** Kawai, Masayoshi; Yamauchi, Michinori; Seki, Yasushi. (Nippon Atomic Industry Group Co., Ltd., Tokyo, Japan; Japan Atomic Energy Research Institute). 1985. Nippon Atomic Industry Group Co., Ltd., 1-7 Uchisaiwai-cho 1-chome Chiyoda-ku, Tokyo 100 Japan. File Number TI87900797.

In NAIG [Nippon Atomic Industry Group] annual review, 1984.

In the design of fusion reactors, there are several complicated ducts for the purpose of exhausting impurities and heating plasma. In order to analyze the radiation streaming through these ducts, an albedo Monte Carlo (AMC) method which enables coupled calculation for neutron and gamma-ray and several importance sampling techniques has been developed. Scoring methods by point detector and next event surface crossing estimator were also devised to take into account the contribution due to albedo reflection. These methods which were implemented in MORSE-I code have been used in the design of FER, and turned out to be effective to obtain data necessary for the design in reasonable computing time. However, it was also necessary to verify the nuclear data and calculational method for the shielding design of fusion reactors. In order to provide data for the verification, streaming experiments were carried out with Fusion Neutronics Source facility (FNS) of JAERI. Seki et al. analyzed the experiments with ordinary Monte Carlo method for some 500,000 histories of source neutrons and obtained excellent agreement between the measured and the calculated values. In the present work, the calculational accuracies with the neutron and gamma-ray coupled AMC method were confirmed through the analysis of the streaming experiments.

46916 (NP—7900797, pp 52-54) **Neutronics study of fusion-fission hybrid blanket in a swimming pool-type tokamak reactor.** Yamaoka, Mitsuaki; Kawashima, Masatoshi; Kamei, Takanobu; Murata, Toru; Inoue, Toyokazu; Seki, Yasushi; Iida, Hiromasa. (Nippon Atomic Industry Group Co., Ltd., Tokyo, Japan; Toshiba Corp.; Japan Atomic Energy Research Institute). 1985. Nippon Atomic Industry Group Co., Ltd., 1-7 Uchisaiwai-cho 1-chome, Chiyoda-ku, Tokyo 100, Japan. File Number TI87900797.

In NAIG [Nippon Atomic Industry Group] annual review, 1984.

The fusion-fission hybrid reactor concept represents an effective method for producing fissile fuel from the fertile nuclides such as ^{233}U. The concept has potential advantage in the construction of a symbiotic electricity generation system with fission reactors. However, the problems in repair and maintenance of the reactor and exchange of the blanket module will be severer than pure fusion reactors due to the highly activated nuclear fuels. Application of the SPTR (Swimming Pool-Type Tokamak Reactor) concept to the fusion-fission hybrid reactor is expected to alleviate these problems. The SPTR, which is installed in a water pool, has advantage over the conventional tokamak reactor in retaining sufficient space for repair, maintenance and fuel exchange because a solid shield can be eliminated. The main objective of this study is to produce SPTR-type hybrid blanket concept of maximum neutronic performance consistent with mechanical and thermal design.

46917 **(PPPL—2448) Conditioning of the graphite bumper limiter for enhanced confinement discharges in TFTR.** Dylla, H.F.; LaMarche, P.H.; Ulrickson, M.; Goldston, R.J.; Heifetz, D.B.; Hill, K.W.; Ramsey, A.T. (Princeton Univ., NJ (USA). Plasma Physics Lab.). May 1987. Contract AC02-76CH03073. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013199.

A strong pumping effect has been observed with plasma operation on the toroidal graphite bumper limiter on TFTR. The pumping effect was induced by conditioning the limiter with a short series (10 to 20) of low density deuterium- or helium-initiated discharges. The density decay constant (tau/sub p/*) for gas-fueled ohmic discharges was reduced from tau/sub p/* $>$ 10 s before conditioning to a minimum value of tau/sub p/* = 0.15 s after conditioning, corresponding to a reduction in the global recycling coefficient from ~100% to less than 50%. Coincident with the low recycling conditions, low current neutral-beam-fueled discharges show global energy confinement times which are enhanced by a factor of two over results with an unconditioned limiter. Two models are proposed for the observed pumping effects: (1) a depletion model based on pumping of hydrogenic species in the near-surface region of the limiter after depletion of the normally saturated surface layer by (carbon and helium) ion-induced desorption; and (2) a codeposition model based on pumping of hydrogenic species

in carbon films sputtered from the limiter by the conditioning process.

46918 **(SAND—87-0140C-FP) A Shot Parameter Specification Subsystem for automated control of PBFA [Particle Beam Fusion Accelerator] II accelerator shots.** Spiller, J.L. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 5p. (CONF-870656—1-FP). NTIS, PC A02. File Number DE87011854.

From 6. Institute of Electrical and Electronic Engineers pulsed power conference; Arlington, VA, USA (29 Jun 1987).

The Shot Parameter Specification Subsystem (SPSS) is an integral part of the automatic control system developed for the Particle Beam Fusion Accelerator II (PBFA II) by the Control Monitor (C/M) Software Development Team. This system has been designed to fully utilize the accelerator by tailoring shot parameters to the needs of the experimenters. The SPSS is the key to this flexibility. Automatic systems will be required on many pulsed power machines for the fastest turnaround, the highest reliability, and most cost effective operation. These systems will require the flexibility and the ease of use that is part of the SPSS. The PBFA II control system has proved to be an effective modular system, flexible enough to meet the demands of both the fast track construction of PBFA II and the control needs of Hermes III at the Simulation Technology Laboratory. This system is expected to meet the demands of most future machine changes.

46919 **(UCRL—50021-85) Laser Program annual report, 1985.** Rufer, M.L.; Murphy, P.W. (eds.). (Lawrence Livermore National Lab., CA (USA)). Nov 1986. Contract W-7405-ENG-48. 702p. NTIS, PC A99/MF A01; 1; GPO Dep. File Number DE87011009.

This volume presents the unclassified activities and accomplishments of the Inertial Confinement Fusion and Advanced Laser Development elements of the Laser Program at the Lawrence Livermore National Laboratory for the calendar year 1985. This report has been organized into major sections that correspond to our principal technical activities. Section 1 provides an overview. Section 2 comprises work in target theory, design, and code development. Target development and fabrication and the related topics in materials science are contained in Section 3. Section 4 presents work in experiments and diagnostics and includes developments in data acquisition and management capabilities. In Section 5 laser system (Nova) operation and maintenance are discussed. Activities related to supporting laser and optical technologies are described in Section 6. Basic laser research and development is reported in Section 7. Section 8 contains the results of studies in ICF applications where the work reported deals principally with the production of electric power with ICF. Finally, Section 9 is a comprehensive discussion of work to date on solid state lasers for average power applications. Individual sections, two through nine, have been cataloged separately.

46920 (UCRL—50021-85, pp 2.1-2.90) **Target design.** Williams, E.A. (ed.). Nov 1986. NTIS, PC A99/MF A01. File Number DE87011009.

In Laser Program annual report, 1985.

The Target Design Program combines the efforts of the plasma, code development, and design groups in three basic areas: developing theories of beam-plasma interaction, implosions, and thermonuclear microexplosions; building plasma and implosion-burn computer codes; and using the theoretical and computational tools to design targets and simulate experiments. Developments which are discussed are: cryogenic wetted-foam targets; electron transport in a steep-gradient high-flux regime; an electromagnetic direct-implicit particle code to enlarge the range of particles accessible to particle simulation; ion physics, and LASNEX code improvements.

46921 (UCRL—50021-85, pp 3.1-3.43) **Target development and fabrication.** Campbell, J.H. (ed.). Nov 1986. NTIS, PC A99/MF A01. File Number DE87011009.

In Laser Program annual report, 1985.

The Target Development Group has the responsibility for turning theoretical target designs into working target systems. The unclassified targets under development generally fell into two broad categories, Inertial Confinement Fusion (ICF) related capsules and physics targets and x-ray laser targets. Other topics described are: development of an advanced target and prealignment system; spin polarized deuterium-tritium mixtures; and methods for producing liquid fuel layers. (FI)

46922 (UCRL—50021-85, pp 4.1-4.107) **Experiments and diagnostics.** Campbell, E.M.; McCauley, E.W.; Hawryluk, A.M.; Auerbach, J.M. (eds.). Nov 1986. NTIS, PC A99/MF A01. File Number DE87011009.

In Laser Program annual report, 1985.

The primary activity of the Laser Experiments and Advanced Diagnostics Program (LEAD) has been to prepare the Nova target areas for the sophisticated inertial fusion, weapons physics, and extreme ultraviolet (XUV) laser experiments that will be fully under way in early 1986. The main tasks included the design, fabrication, installation, and activation of numerous diagnostics on both the ten-beam and two-beam target chambers. The activities described include: high-Z plasmas, exploding foils to study parametric instabilities; x-ray laser experiments; and diagnostic systems on the Nova target chambers. Additionally, the activities of the Data Management and Analysis Group are described.

46923 (UCRL—50021-85, pp 5.1-5.57) **Laser systems.** Foley, R.J.; Hunt, J.T. (eds.). Nov 1986. NTIS, PC A99/MF A01. File Number DE87011009.

In Laser Program annual report, 1985.

The major accomplishments of the Laser Systems Group were completing activation of the Nova two-beam target chamber and developing the capability to do sophisticated, well-characterized target irradiation experiments in both the ten- and two-beam target chambers. The Nova laser system consists of the ten laser beams, the optical switchyard used for directing the beams and diagnosing beam quality, and the two target chambers. This section describes system elements, preparation, performance, and limitations. Testing of platinum-free, neodymium-doped phosphate laser glass is also described.

46924 (UCRL—50021-85, pp 6.1-6.54) **Laser and optical technology.** Campbell, J.H.; Powell, H.T.; Hunt, J.T. (eds.). Nov 1986. NTIS, PC A99/MF A01. File Number DE87011009.

In Laser Program annual report, 1985.

The Nova laser system has evolved to the point that it is routinely used for conducting target physics experiments in the ten- and two-beam chambers. However, several unforeseen problems during the activation period were encountered. Glass disk damage is discussed and damage mechanism, damage reduction, and disk-edge cladding are discussed. Nonlinear optical effects the low efficiency of polarization-tuned harmonic converter crystals have also been investigated.

46925 (UCRL—50021-85, pp 7.1-7.142) **Laser research and development.** Powell, H.T. (ed.). Nov 1986. NTIS, PC A99/MF A01. File Number DE87011009.

In Laser Program annual report, 1985.

The Advanced Laser Development (ALD) program has four principal objectives: to support the activation of the Nova laser system for inertial confinement fusion (ICF) experimentation; to develop a low-cost, 5- to 10-MJ laser for ICF research; to develop efficient, high-repetition-rate (1 Hz to 1 kHz), high-quality lasers for ICF reactor applications, for the medium-power solid state laser program of the Defense Advanced Research Projects Agency (DARPA), and for the free-electron laser program of the Strategic Defense Initiative Office (SDIO); and to conduct basic laser research for energy (Office of Basic Energy Science) and for special tasks such as the development of uv laser coatings for the Air Force Weapons Laboratory. This section describes the efforts in these areas as well as investigation of: damage in laser glasses, crystals and optical coatings; growth and understanding of nonlinear crystals; optical feedback, and flashlamp properties.

46926 (UCRL—50021-85, pp 8.1-8.61) **ICF applications.** Orth, C.D. (ed.). Nov 1986. NTIS, PC A99/MF A01. File Number DE87011009.

In Laser Program annual report, 1985.

The major thrust of Inertial Confinement Fusion (ICF) Applications this year has been to demonstrate that ICF power reactors can be economically competitive as well as safer and less harmful to the environment than fission or coal plants. The design for the Cascade reactor has established a new benchmark and standard for ICF reactors: A future design will receive attention only if it is likely to outperform Cascade. This year trends in the power industry were examined and related to fusion reactor design, and the methodology for future comparisons was developed. Finally, new reactor ideas were examined and considerations were given as to how to develop ICF for multiple applications. An economic analysis of ICF reactors and a study of power demand are also presented.

46927 (UCRL—50021-85, pp 9.1-9.92) **High-average-power lasers.** Gagnon, W.L. (ed.). Nov 1986. NTIS, PC A99/MF A01. File Number DE87011009.

In Laser Program annual report, 1985.

The goals of the High-Average-Power Laser Program at LLNL are to develop a broad technology base for solid state lasers and to demonstrate high-average-power laser operation with more efficiency and higher beam quality than has been possible with current technology. Major activities are the zig-zag laser testbed and the gas-cooled-slab laser test bed. This section describes these activities as well as discussion of material development; nonlinear optics; laser materials, and applications.

46928 **(UCRL—93129) Laser-driven instabilities in long scalelength plasmas.** Kruer, W.L. (Lawrence Livermore National Lab., CA (USA)). 31 Jul 1985. Contract W-7405-ENG-48. 27p. (CONF-8507117—3). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87012908.

From 29. Scottish Universities summer school in physics: laser plasma interactions; St. Andrews, UK (28 Jul 1985).

In this update lecture we focus on laser-driven instabilities in long scalelength underdense plasmas. Particular attention is given to some recent experiments on Raman scattering of intense laser light. Many important features are in accord with theoretical expectations. These features include a correlation of hot electron generation with Raman scattering, an increase in this scattering as the density scale length increases, and collisional suppression of the instability. Some challenging aspects of the growing data base as well as various deficiencies in the understanding are discussed. The role of the plasmon decay instability 2ω/sub pe/, Brillouin, and filamentation instabilities is also briefly considered.

46929 **(UCRL—95283) Optical damage in polymers by millisecond light pulses.** Wolfe, C.R.; Campbell, J.H.; Lyon, R.E.; Pitts, J.H.; Powell, H.T. (Lawrence Livermore National Lab., CA (USA)). Nov 1986. Contract W-7405-ENG-48. 31p. (CONF-861124—2). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013106.

From Symposium on optical materials for high power lasers; Boulder, CO, USA (3 Nov 1986).

Optical damage in epoxy based polymers used to attach absorbing cladding onto the edge of laser disks of the Nova Laser has been studied. Damage was produced by exposing the polymers to a 20-40 J/cm^2 fluence of broad band Xe-flashlamp light having a pulse length of approximately 0.5 ms. This simulates the flashlamp light used to pump high power Nd:glass laser amplifiers. The predominant damage mechanisms appear to be pyrolysis, associated with absorbing inclusions and photolysis, associated with intrinsic absorption of the polymer. The amount of damage can be minimized be careful filtering of the polymer to reduce the presence of foreign material and by minimizing the near uv absorption of the polymer and the uv emission of the flashlamps.

46930 **(UCRL—95544) Alarm points for fixed oxygen monitors.** Miller, G.C. (Lawrence Livermore National Lab., CA (USA)). May 1987. Contract W-7405-ENG-48. 17p. (CONF-870609—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87012911.

From American industrial hygiene conference; Montreal, Canada (1 Jun 1987).

Oxygen concentration monitors were installed in a vault where numerous pipes carried inert cryogens and gases to the Mirror Fusion Test Facility (MFTF-B) experimental vessel at Lawrence Livermore National Laboratory (LLNL). The problems associated with oxygen-monitoring systems and the reasons why such monitors were installed were reviewed. As a result of this review, the MFTF-B monitors were set to sound an evacuation alarm when the oxygen concentration fell below 18%. We chose the 18% alarm criterion to minimize false alarms and to allow time for personnel to escape in an oxygen-deficient environment.

46931 **(UCRL—95981) Laser-plasma-interaction experiments using multikilojoule lasers.** Drake, R.P. (Lawrence Livermore National Lab., CA (USA)). Jul 1987. Contract W-7405-ENG-48. 27p. (CONF-8705172—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013483.

From 18. European conference on laser interaction with matter; Prague, Czechoslovakia (4 May 1987).

This paper summarizes the results of several laser-plasma-interaction experiments using multikilojoule lasers, and considers their implications for laser fusion. The experiments used 1.06, 0.53, 0.35, and 0.26 μm light to produce relatively large, warm, planar plasmas and to study the effect of laser wavelength and density-gradient scale length on the Stimulated Raman Scattering and on the scattering of light at frequencies near the incident laser frequency by Stimulated Brillouin Scattering or other processes. The results of these experiments suggest that some laser wavelength between 0.2 and 0.6 μm will be required for high-gain laser fusion.

46932 **(UCRL—97188) Integral measurements and calculations of neutron and gamma-ray emission at 14 MeV and an overview of the new multi-user tandem at LLNL.** Hansen, L.F. (Lawrence Livermore National Lab., CA (USA)). Aug 1987. Contract W-7405-ENG-48. 14p. (CONF-870959—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014351.

From International conference on neutron physics; Kiev, USSR (21 Sep 1987).

In this paper two topics will be presented: (a) the integral measurements and calculations of gamma-ray and neutron emission spectra due to a source of 14 MeV neutrons from materials of interest to thermonuclear reactors and (b) an overview of the new multi-user accelerator facility being built at LLNL. Under (a), recent measurements of the gamma-ray and neutron leakage spectra from materials ranging from Be to ^{238}U pulsed with 14 MeV neutrons are presented. The Monte Carlo calculational analysis using the codes TART and SANDYL with the ENDL and ENDF/B-V photon-neutron libraries is discussed. Under (b), details of the new multi-disciplinary laboratory centered around a 10 MV Van de Graaff with four ion sources and 19 experimental beam lines will be given. The experimental program to be carried out in this facility will be discussed. 19 refs., 4 figs., 2 tabs.

46933 **(UCRL—97215) Magnetic mirror fusion systems: Characteristics and distinctive features.** Post, R.F. (Lawrence Livermore National Lab., CA (USA)). 10 Aug 1987. Contract W-7405-ENG-48. 18p. (CONF-870908—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013798.

From Course and workshop on physics of mirrors, reversed field pinches and compact tori; Varenna, Italy (1 Sep 1987).

A tutorial account is given of the main characteristics and distinctive features of conceptual magnetic fusion systems employing the magnetic mirror principle. These features are related to the potential advantages that mirror-based fusion systems may exhibit for the generation of economic fusion power.

46934 **Theory of induced spatial incoherence.** Lehmberg, R.H.; Schmitt, A.J.; Bodner, S.E. (Naval Research Laboratory, Washington, DC 20375). *Journal of Applied Physics;* 62: No. 7, 2680-2701(1 Oct 1987).

This paper describes theoretical and experimental investigations of induced spatial incoherence (ISI), a technique for achieving the smooth and controllable target beam profiles required for direct-drive laser fusion. In conventional ISI, a broadband laser beam (coherence time t/sub c/ = $1/\Delta\nu << t$/sub pulse/) is sliced into an array of mutually incoherent beamlets by echelon structures that impose successive time delay increments $\Delta t > t$/sub c/. A focusing lens then overlaps those beamlets onto the target, which is usually located at the far field. Here, we evaluate the ideal target

beam profiles for practical ISI focusing configurations, and examine the perturbing effects of transient interference, laser aberration, and plasma filamentation. Analytic and numerical calculations show that nonuniformities due to interference among the beamlets are smoothed by both thermal diffusion and temporal averaging. Under laser-plasma conditions of interest to inertial confinement fusion (ICF), average ablation pressure nonuniformities —1% should be readily attainable. We also investigate a partial ISI scheme, which allows widely spaced beamlets to remain mutually coherent; the resulting high spatial frequency interference structure can be effectively smoothed by thermal diffusion alone. A perturbation analysis shows that the average target profile <I(x)> remains relatively insensitive to laser beam aberration when the scale length of that aberration is larger than the initial beamlet width. This aberration will tend to broaden and smooth <I(x)>, rather than introduce any small-scale structure.

46935 **Neutral-beam current drive in tokamaks.** Devoto, R.S. (Lawrence Livermore National Laboratory, University of California, Livermore, CA 94550). *AIP (American Institute of Physics) Conference Proceedings;* **158**: No. 1, 716-726(30 Jul 1987). (CONF-8610115—).

From 4. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (27 Oct 1986).

The theory of neutral-beam current drive in tokamaks is reviewed. Experiments are discussed where neutral beams have been used to drive current directly and also indirectly through neoclassical effects. Application of the theory to an experimental test reactor is described. It is shown that neutral beams formed from negative ions accelerated to 500-700 keV are needed for this device.

46936 **Updated reference design of a liquid-metal-cooled tandem mirror fusion breeder.** Berwald, D.H.; Whitley, R.H.; Garner, J.K.; Gromada, R.J.; Mc Carville, T.J.; Moir, R.W.; Lee, J.D.; Bandini, B.R.; Fulton, F.J.; Wong, C.P.C. (Grumman Aerospace Corp., Bethpage, NY 11714). *Fusion Technology;* **12**: No. 1, 30-70(Jul 1987).

The current version of a reference design for a liquid-metal-cooled tandem mirror fusion breeder (fusion-fission hybrid reactor) is summarized. The design update incorporates the results of several recent studies that have attempted to resolve key technical issues that were associated with an earlier reference design completed in 1982. The issues addressed relate to the following areas of design and performance: nuclear performance, magnetohydrodynamic (MHD) pressure loading, beryllium multiplier lifetime, structural efficiency and lifetime, reactor safety, corrosion/mass transfer, and fusion breeder capital cost. The updated blanket design provides increased performance and reduced technological risk in comparison with earlier fission-suppressed hybrid blanket designs. Specifically, the blanket is expected to achieve a net fissile breeding ratio (per fusion) of 0.84, with a tritium breeding ratio of 1.06, and an average blanket energy multiplication of 2.44. It would operated at a relatively low neutron wall loading (1.7 MW/m/sup 2/) with a low lithium coolant outlet temperature (425°C).

46937 **Special features of first-wall heat transfer in liquid-metal fusion reactor blankets.** Taghavi, K.; Tillack, M.S.; Madarame, H. (Univ. of Kentucky, Dept. of Mechanical Engineering, Lexington, KY 40506). *Fusion Technology;* **12**: No. 1, 104-113(Jul 1987).

The presence of strong magnetic fields and of volumetric heat generation in the fusion reactor environment result in an unusual heat transfer situation for liquid metals, as compared to nonconducting coolants. The effects of velocity profiles and volumetric heat generation on heat transfer in liquid-metal blankets are examined both analytically and numerically. Analysis shows that unlike the fully developed Nusselt number, the spatial dependence within the entry region is relatively insensitive to the shape of the velocity profile and the amount of bulk heating. Hence, closed form solutions for fully developed heat transfer can be used together with a normalized entrance region curve to estimate heat transfer throughout the blanket.

46938 **Power transport to the poloidal divertor experiment scoop limiter.** Kugel, H.W.; Budny, R.; Fonck, R.; Goldston, R.; Grek, B.; Kaita, R.; Kaye, S.; Knize, R.J.; Manos, D.; Mc Cann, R. (Plasma Physics Lab., Princeton Univ., Princeton, NJ 08544). *Fusion Technology;* **12**: No. 1, 145-152(Jul 1987).

Power transport to the Poloidal Divertor Experiment graphite scoop limiter was measured during both ohmic- and neutral-beam-heated discharges by observing its front face temperatures using an infrared camera. Measurements were made as a function of a plasma density, current, position, fueling mode, and heating power for both co- and counter-neutral beam injection. The measured thermal load on the scoop limiter was 25 to 50%. of the total plasma heating power. The measured peak front face midplane temperature was 1500°C, corresponding to a peak surface power density of 3 kW/cm/sup 2/. This power density implies an effective parallel power flow of 54 kW/cm/sup 2/ in agreement with the radial power distribution extrapolated from television Thomson scattering and calorimetry measurements.

46939 **Similarities between the plasma vortex filaments (relativistic and nonrelativistic) observed in the plasma focus and in conventional relativistic electron-beam machines.** Bostick, W.H. (Stevens Institute of Technology, Hoboken, NJ 07030). *Fusion Technology;* **12**: No. 1, 92-103(Jul 1987).

In 1966, the Stevens Institute of Technology (SIT) plasma focus group demonstrated experimentally that the current sheath of the plasma focus is carried by pairs of plasma vortex filaments, which exhibit a force-free, Beltrami-type morphology. Experiments at SIT in 1980 and at the Air Force Weapons Laboratory (AFWL) show that relativistic electron beams traveling through a background gas of — 1 Torr, and even in a "vacuum" diode, exhibit the same type of filamentary morphology, but on a spatial dimension scale, which extends down to the 1-μm region. Some of the experimental evidence accumulated in work at AFWL from 1979, to 1981, which supports the statement that there is a close similarity between current-carrying morphologies of the plasma focus and the relativistic beam machines, is presented.

46940 **Abel inversion using transform techniques.** Keefer, D.R.; Smith, L.M.; Sudharsanan, S.I. (Center for Laser Applications, The Univ. of Tennessee Space Institute, Tullahoma, TN 37388). pp 50-58 of Proceedings of ICALEO '86. Toledo, OH; Laser Institute of America (1986). (CONF-861197—).

From ICALEO '86: laser application conference; Arlington, VA, USA (10 Nov 1986).

A method is presented for calculating the reconstruction of a circularly symmetric two-dimensional function from its projection, a relation known as the Abel inversion. This technique differs from techniques used previously by using integral transforms for its implementation. The frequency-domain analysis allows for experimentally obtained data, which is often noisy and off-center, to be dealt with in a systematic, rational manner. The formulation of the Abel inversion in terms of transforms, the filtering of the noise, and the estimate of the off-center shift are discussed. Sample calculations of simulated noisy data and the application of the method to an image of a laser sustained plasma are presented.

46941 **Noncollisional absorption of femtosecond laser pulses in plasmas by nonlinear forces.** Miley, G.H.; Batchelor, M.T.; Hora, H.; Sherrin, M.M.; Stening, R.J. (Univ. of Illinois, Fusion Studies Lab., 103 S. Goodwin Ave., Urbana, IL). pp 192 of Digest of technical papers from the OSA/IEEE 1985 conference on lasers and electro-optics. Washington, DC; Optical Society of America (1985). (CONF-850558—).

From Conference on lasers and electro-optics; Baltimore, MD, USA (21 May 1985).

Since subpicosecond laser pulses have become available, study of their interaction and absorption in plasma is of interest on account of the nonlinear force process. In these cases electric field generation and the presence of double layers in the plasma are important as is known from the caviton mechanisms, and a first estimation of the absorption processes involved now has to be evaluat-

ed for the necessary relativistic conditions. The dynamics is described by the nonlinear forces with full inclusion of the Poynting term. The results of the solution are given in this paper. The authors find a relatively strong absorption process which might assist high-energy transfer to plasmas for fusion using subpicosecond ripple in the laser pulse. It further allows one to study basic plasma processes which could not be treated before the advent of femtosecond pulses. In turn, thin plasma foils can be used for diagnostics of the femtosecond pulses and for detection of their parameters. A new type of dynamic mechanism for a limitation of femtosecond laser pulses (or their high-frequency analog) in any dielectric material (e.g., in fibers) is evaluated.

46942 **TuFF3. Self-focusing in underdense ultraviolet laser-produced plasmas.** Tanaka, K.; Boswell, B.; Craxton, R.S.; Goldman, L.M.; Richardson, M.C.; Seka, W.; Short, R.W.; Soures, J.M. (Univ. of Rochester, NY). *Journal of the Optical Society of America B: Optical Physics;* **1**: No. 3, vp(Jun 1984).

Ultraviolet laser-matter interaction processes are of considerable interest to laser fusion. Among these processes, filamentation (or self-focusing) is of particular importance, since it could prevent attainment of the illumination uniformity required for high target compression. In addition self-focusing may complicate the interpretation of target interaction experiments. Self-focusing has been studied experimentally by side-on x-ray pinhole camera photography and backscatter spectrometry. These results are compared with two-dimensional simulations using the hydro code SAGE, which is well suited to model thermal self-focusing (no ponderomotive forces are included in these simulations).

46943 **Summary abstract: description and performance of uranium beds used to pump tritium-deuterium at the Tritium Systems Test Assembly.** Walthers, C.R. (Los Alamos National Lab., NM). *Journal of Vacuum Science and Technology, A: Vacuum, Surfaces, and Films;* **2**: No. 2, 722-723(Apr-Jun 1984).

The Tritium Systems Test Assembly (TSTA), a full size simulation of the fuel loop for a fusion reactor, will circulate 360 g mol/day (1800 g) of DT and will have an inventory of 150 g of tritium. During shutdown, a safe storage system for hydrogen isotopes, primarily DT, is needed. Uranium reacts readily with hydrogen, deuterium, or tritium at room temperatures to form U(H, D, T)$_3$ having a dissociation pressure of approximately 10^{-4} Torr. Upon heating to 720 K, the isotopes will desorb at pressures of 1 to 2 atm. Uranium beds were selected as the means for long-term storage of the fuel loop inventory.

99 GENERAL AND MISCELLANEOUS

46944 **(ANL/TIS—87-1) Argonne National Laboratory 1985 publications.** Kopta, J.A. (ED.); Hale, M.R. (comp.). (Argonne National Lab., IL (USA)). Aug 1987. Contract W-31109-ENG-38. 239p. NTIS, PC A11. File Number DE87014450.

This report is a bibliography of scientific and technical 1985 publications of Argonne National Laboratory. Some are ANL contributions to outside organizations' reports published in 1985. This compilation, prepared by the Technical Information Services Technical Publications Section (TPB), lists all nonrestricted 1985 publications submitted to TPS by Laboratory's Divisions. The report is divided into seven parts: Journal Articles - Listed by first author, ANL Reports - Listed by report number, ANL and non-ANL Unnumbered Reports - Listed by report number, Non-ANL Numbered Reports - Listed by report number, Books and Book Chapters - Listed by first author, Conference Papers - Listed by first author, Complete Author Index.

46945 **(BNL—52015) The first forty years, 1947-1987.** Rowe, M.S. (ed.); Cohen, A.; Petersen, B. (Brookhaven National Lab., Upton, NY (USA)). 1987. Contract AC02-76CH00016. 92p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87014717.

This report commemorates the fortieth anniversary of Brookhaven National Laboratory by representing a historical overview of research at the facility. The chapters of the report are entitled: The First Forty Years, Brookhaven: A National Resource, Fulfilling a Mission - Brookhaven's Mighty Machines, Marketing the Milestones in Basic Research, Meeting National Needs, Making a Difference in Everyday Life, and Looking Forward.

46946 **(SAND—87-1320C) Errors associated with Russian name transliteration.** Pasterczyk, C.E. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 7p. (CONF-871087—3). NTIS, PC A02. File Number DE87011717.

From Conference of American Translators Association; Albuquerque, NM, USA (7 Oct 1987).

Works from the Soviet Union form a significant portion of the world's sci/tech literature. Because information is increasingly being stored in machine-readable form and most western keyboards are unable to accommodate Cyrillic characters, some sort of conversion scheme between the Cyrillic and Roman alphabets is necessitated. Unfortunately, no clear agreement exists in theory or in practice of which scheme would be "best," hence a multitude are currently in use. The belief that a one-to-one mapping exists between Russian and English is naive. One can view the transliteration process as movement within a multi-dimensional matrix with the following dimensions: source script, target script, conversion scheme, time, intended usage of conversion, context of word, character to be converted, and where the character appears in the word. Errors can occur along any axis of the matrix and accumulate as movement within the matrix takes place. Error introduction into online databases can be reduced by translating and transliterating only from original language documents and introducing some kind of authority control, automated and/or intellectual.

46947 **(SAND—87-1509C) All translations are not created equal.** Newman, P. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 7p. (CONF-871087—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87010492.

From Conference of American Translators Association; Albuquerque, NM, USA (7 Oct 1987).

Buyers who select a translator on the basis of a low bid are frequently unaware of the many factors that affect translation value. This article suggests that other parameters, such as translation errors, document importance, delivery time and convenience, may be of equal weight in the selection of a translation service. Arbitrary numerical values are assigned to the range of variation within a particular parameter, and comparative values are calculated.

46948 **(SAND—87-1557C) Foreign language identification: First step in the translation process.** Newman, P. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 9p. (CONF-871087—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011065.

From Conference of American Translators Association; Albuquerque, NM, USA (7 Oct 1987).

Guidelines are given for identifying 16 European languages that use the Latin alphabet by means of the diacritical marks used with particular letters. It is not necessary to know the languages to identify them. Five Slavic languages can be identified on the basis of the Cyrillic letters they use or do not use. Guidelines are also given for discriminating between Chinese, Japanese and Korean.

9901 Management

46949 **(INIS-mf—10955) Uses of atomic energy for the economic and social development in the German Democratic Republic.** (Council of Ministers, Berlin (German Democratic Republic)). 1987. 59p. (CONF-870309—). NTIS (US Sales Only), PC A04/MF A01. File Number DE87702908.

From United Nations conference for the promotion of international co-operation in the peaceful uses of nuclear energy; Geneva, Switzerland (23 Mar 1987).

Also published in German.

A report is given on the peaceful uses of atomic energy in the GDR. The following topics are discussed: (1) present state and

prospects of the utilization of atomic energy in the GDR, (2) protection against the dangers from the use of atomic energy, (3) the GDR's share in international efforts to secure the peaceful uses and to further the development of atomic energy, and (4) conclusions for the enhancement of international cooperation in the peaceful uses of atomic energy. 2 tabs., 6 figs., and 23 color and 3 black-and-white plates are included.

46950 **(SAND—86-2829C) Documentation as a management strategy for reaching goals in high-risk research-oriented projects.** Shirley, C.G. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 12p. (CONF-8710103—2). NTIS, PC A02. File Number DE87012394.

From Project Management Institute seminar/symposium; Milwaukee, WI, USA (2 Oct 1987).

The paper reports experience bearing especially on construction projects in an R & D environment. From experience has come a set of principles about the key purposes of documentation. The paper first describes characteristics of a project environment that combines research and construction, then goes on to discuss basic project management goals that documentation can help the manager reach. The final sections present some specifics of documentation that may assist project managers who are considering what kind of documentation their projects need.

REFER ALSO TO CITATION(S) 45989

46951 **(AD-A—181398/9/XAB) Two-dimensional signal processing and storage and theory and applications of electromagnetic measurements. Annual report, 1 January-31 December 1986.** Schafer, R.W.; Paris, D.T. (Georgia Inst. of Tech., Atlanta (USA). School of Electrical Engineering). 1 Jan 1987. 47p. NTIS, PC A03/MF A01.

This is an annual report on research conducted under the auspices of the Joint Services Electronics Program. Specific topics covered are: digital-signal processing, parallel-processing architectures, two-dimensional optical storage and processing, hybrid optical/digital signal processing, electromagnetic measurements in the time domain, and automatic radiation measurements for near-field and far-field transformations.

46952 **(AD-A—181613/1/XAB) Transformation of broadcasting into pipelining. Research report.** Wong, Y.; Delosme, J.M. (Yale Univ., New Haven, CT (USA). Dept. of Computer Science). Jun 1987. 34p. (YALEU/DCS/RR—544). NTIS, PC A03/MF A01.

A characteristic shared by many computation-intensive algorithms is the repeated usage of a few data values in a sequence of computations. An efficient parallel implementation of these data dependences often requires the simultaneous transfer, or broadcasting, of the data values to all the processors that need them. Unfortunately, direct realization of this broadcasting operation on VLSI processor arrays, especially on systolic arrays, usually results in severe performance degradation. A technique for decomposing broadcasting dependences into propagation dependences at the algorithm level is presented in this paper. Such propagation dependences, when physically realized, result in pipelining. The determination of a feasible propagation scheme is formulated as a linear algebra problem. It is proven that all broadcastings can be decomposed into propagations, and a systematic method for finding such decompositions is proposed.

46953 **(AD-A—181748/5/XAB) Parallel structure for online identification and adaptive control. Master's thesis.** Kim, Y.H. (Naval Postgraduate School, Monterey, CA (USA)). Mar 1987. 75p. NTIS, PC A04/MF A01.

The author investigated the possibility of employing parallel-computing structures for adaptive identification and control. The identification algorithm is based on recursive least-squares with covariance resetting and block-processing technique. It is shown how a parallel-processing structure can be obtained by recursively applying Givens Rotation to the data matrix. Due to the regularity of its structure, the approach presented is particularly attractive for VLSI implementation.

46954 **(ANL—87-31) REDUCE-aided study of a problem in Hermitian matrix theory.** Kwong, M.K. (Argonne National Lab., IL (USA)). Jul 1987. Contract W-31109-ENG-38. 28p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014331.

Let A be any n x n positive definite matrix and B any n x n non-negative definite matrix. In an earlier paper we showed that for each n there is a real number t/sub n/ > 2 such that if $t <$ t/sub n/ then the solution X of the matrix equation $A^2X + XA^2 + tAXA = B$ is non-negative definite. For $n = 2$, $t_2 = \infty$ and for $n = 3$, t/sub 3/ $= 8$. In this report we show that t/sub 4/ $= 4$, t/sub 5/ < 3.02048507 and t/sub 6/ < 2.62120330.

46955 **(ANL/MCS-TM—92) Evaluating computers and their performance: Perspectives, pitfalls, and paths.** Dongarra, J.; Martin, J.; Worlton, J. (Argonne National Lab., IL (USA). Mathematics and Computer Science Div.). Jun 1987. Contract W-31109-ENG-38. 24p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014264.

Various considerations relating to the evaluation of computer systems and their performance are presented with particular emphasis on the issue of benchmarking. In this context, the issue of workload analysis and the subsequent justification of benchmark authenticity based on correlation to the workload is discussed as well as the need to limit variables in the analysis process. The objective has been to present a guide to some of the considerations and approaches involved in the benchmarking and performance evaluation of computers. Special attention will be given to supercomputers because of the extremely high cost associated with their development, procurement, and use as well as the urgent need of users to obtain the highest speeds possible for their computations.

46956 **(ANL/MCS-TM—93) Un-Skolemizing clause sets.** McCune, W.W. (Argonne National Lab., IL (USA). Mathematics and Computer Science Div.). May 1987. Contract W-31109-ENG-38. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014265.

This note addresses the following problem. Given a set S of clauses and a set of constant and function symbols F that occur in the clauses of S, obtain a fully quantified (closed) formula S′ from S by replacing expressions starting with symbols in F with existentially quantified variables. S′ must be unsatisfiable if and only if S is unsatisfiable. A sound (but not complete) solution is given in the form of an outline of an algorithm.

46957 **(ANL/TM—451) NJE enhancements to NBI OASys mail.** Carlson, R.A.; Errion, S.M. (ed.). (Argonne National Lab., IL (USA)). Aug 1987. Contract W-31109-ENG-38. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014330.

NJE Enhancements to NBI OASys Mail supplements the NBI OASys Mail Reference Guide (S200848) published by NBI Inc. The NBI vendor document covers the base Mail package (e.g., setting up tailors, alias lists), a package that allows NBI users to communicate with other NBI users on the same Integrated Control Unit (ICU) and to communicate with other NBI users on another ICU, when the ICUs are interconnected. NJE Enhancements to NBI OASys Mail assumes that you already know how to send mail to and receive mail from other NBI OASys users. It provides NBI users with necessary supplemental information for using "Gateway" Mail, which allows NBI users to communicate with Argonne computer users on the IBM mainframe or divisional VAX computers (see Appendix A for a description of the NBI configuration with the central Argonne computers and Table 1 for a list of Argonne nodenames) and to communicate with other research centers and universities through BITnet. By using Gateway Mail, NBI users can send and receive electronic mail to and from other computers on the network simply by using OASys Mail commands. NBI users type the same commands to communicate with external users via Gateway Mail as they use when communicating with other NBI users via OASys Mail.

46958 (ANL/TM—453) A plan for administrative computing at ANL FY1988 through FY1990. Hale, D.O.; Bretscher, M.E.; Hischier, R.C.; Moore, N.J. (Argonne National Lab., IL (USA)). Aug 1987. Contract W-31109-ENG-38. 123p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE87014715.

The introduction (Chapter 1) of the FY1988 through FY1990 Long-Range Plan assesses the state of administrative at ANL and the implications of FY 1988 funding recommendations. Chapter 2 of this document discusses the strategy and goals which are an important part of administrative data processing plans for the Laboratory. Chapter 3 describes the management guidelines established by the Administrative Data Processing Oversight Committee for the proposal and implementation of administrative computing systems. The guidelines are a valuable tool for management in determining what applications would be appropriate to their needs and in formulating the proposals for those applications. Summaries of the proposals for new or enhanced administrative computing systems presented by individual divisions or departments with the assistance of the Information Systems Section of Computing Services to the Administrative Data Processing Oversight Committee appear in Chapter 4. The summaries indicate some of the possibilities for the development of administrative computing systems at ANL. The areas of the various proposals are diverse, but they share a common concern with the integration and unification of existing systems into a more efficient and productive whole. The detailed tables in Chapter 5 give information on how much the resources to develop and implement a given system will cost its users. The tables include development costs, computing/operations costs, software and hardware costs, and effort costs. They include both systems funded by Laboratory General Expense and systems funded by the users themselves.

46959 (BNL—51916-Vol.2) Preconditioned iterative methods applied to singularly perturbed elliptic boundary value problems: Volume 2. Goldstein, C.I. (Brookhaven National Lab., Upton, NY (USA)). Jan 1987. Contract AC02-76CH00016. 58p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014337.

It is the purpose of this report to modify and extend results in a previous report, concerning a class of multigrid preconditioners developed for use in the iterative solution of singularly perturbed elliptic boundary value problems. Typically, the low order derivative terms are multiplied by a large parameter, K. The preconditioner was based on a "partial" multigrid V cycle applied to the discrete LaPlacian, -Δ/sup h/, where h is the grid size. By this, we mean that the coarse grid residual problem is not solved. At most, one or a few relaxation sweeps are applied on this grid level. The multigrid preconditioner is now extended to include the W cycle applied to -Δ/sup h/ as well as -Δ/sup h/ + K^2. It is shown how to choose the coarsest grid size as a function of K, h, and the type of multigrid cycle in order to obtain optimal convergence of the preconditioned iterative method. It is proved that the low frequency subspace is scaled by $0(K^{-2})$ for both the V and W cycles. For the W cycle, it is proved that the multigrid preconditioner is norm equivalent to $(-\Delta/\text{sup h/} + K^2)^{-1}$, uniformly in both K and h. The results are proved using Fourier analysis.

46960 (CONF-870633—1) Extending Green's function formalism to general nonlinear equations. Cacuci, D.G.; Perez, R.B.; Protopopescu, V. (Oak Ridge National Lab., TN (USA)). 1987. Contract AC05-84OR21400. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013541.

From 4. workshop on nonlinear evolution equations and dynamical systems; Montpellier, France (11 Jun 1987).

Forward and backward propagators are canonically obtained for general nonlinear problems and shown to be the natural generalizations of the Green's functions used to solve linear problems. The propagators obey a reciprocity relationship and satisfy a closed nonlinear integral equation. The formalism is applied on an illustrative example.

46961 (CONF-870832—2-Draft) Applications of artificial intelligence in the US nuclear industry. Uhrig, R.E. (Oak Ridge National Lab., TN (USA); Tennessee Univ., Knoxville (USA)). 1987. Contract AC05-84OR21400. 11p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87014414.

From Topical meeting on artificial intelligence and other innovative computer applications in the nuclear industry; Snowbird, UT, USA (31 Aug 1987).

In the US, the development of expert systems in the nuclear power field is being carried out by a wide spectrum of organizations, i.e., vendors, architect-engineer firms, universities, national laboratories, Federal agencies, the electric utility industry, and small entrepreneur groups. The most coherent development program is the Electric Power Research Institute program to demonstrate the usefulness of artificial intelligence in a number of areas, including augmenting plant automation and an agreement to transfer the technology of NASA's multi-year AI "Core Technology in Systems Autonomy" to the nuclear power industry. A few vendors are offering commercial products that reduce the burden on reactor operators during both normal and abnormal operation. Several AI programs at universities and national laboratories have automation as their primary focus. Many individual AI projects have been initiated under the SBIR (Small Business Innovative Research) program. The fundamental and synergistic relationship between training and expert systems supports the use of artificial intelligence in the training of nuclear personnel. In the long run, the most significant contribution of artificial intelligence may well be the introduction of AI programming techniques. With multi-million line computer codes contemplated for automated nuclear plants, the ability to readily modify programs and utilize verified and validated "building blocks" of code offer extraordinary advantages.

46962 (CONF-870984—3) Power transformation of the sample kurtosis. Bowman, K.O.; Shenton, L.R. (Oak Ridge National Lab., TN (USA); Georgia Univ., Athens (USA)). 1987. Contract AC05-84OR21400. 3p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87010012.

From 46. session of the International Statistical Institute; Tokyo, Japan (8 Sep 1987).

The distribution of the sample kurtosis from general populations are considered. In most cases, its distribution is far from normal especially small samples. Power transformations turn out to be effective in reducing its skewness to near zero and its kurtosis close to the normal value three. Four moments approximating distributions are used to approximate percentage points. Applications to simulation studies should reduce the cycle size significantly for simulation stability.

46963 (CONF-8706178—1) On the relational modeling of discrete PDE problems. Balaban, D.; Garbarini, J.; Olwell, K.; Greiman, W.; Shlaer, S. (Lawrence Livermore National Lab., CA (USA); Project Technology, Inc., Berkeley, CA (USA)). 1987. Contract W-7405-ENG-48. 67p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87013336.

From International symposium on AI, expert systems and languages in modelling and simulation; Barcelona, Spain (2 Jun 1987).

We have created a knowledge representation scheme for discrete partial differential equation (PDE) problems which makes possible the mechanical creation of simulation programs has been created. This knowledge representation scheme is based on: three fundamental relations between observables, densities, currents, and sources which provide a framework for a large class of physics problems; and partitioning spacetime to provide a framework for defining a discrete system of equations by specifying approximations to spacetime current integrals on spacetime partitions.

46964 (DOE/ER—0342) Summaries of the FY 1987 Applied Mathematical Sciences Research program. (USDOE Office of Energy Research, Washington, DC. Scientific Computing Staff). Aug 1987. 61p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014447.

The purpose of this report is to provide a convenient compilation of summaries of the individual research projects that constitute the Applied Mathematical Sciences research subprogram managed by the Director, Scientific Computing Staff, Office of the Director of Energy Research, Department of Energy. This office, organized in 1984, consists of the Applied Mathematical Sciences Research activity formerly under the Division of Engineering, Mathematical and Geosciences, Office of Basic Energy Sciences, Office of Energy Research, and the management of the Energy Sciences

Advanced Computation activity. The areas included in this report are: analytical and numerical methods, information analysis techniques, advanced computing concepts, energy science advanced computation and capital equipment.

46965 **(DOE/ER/25009—423) Finite elements for 2D elliptic equations with moving nodes.** Williams, R.D. (California Inst. of Tech., Pasadena (USA)). [1987]. Contract FG03-85ER25009. 20p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013501.

A Finite Element algorithm for minimizing a homogeneous variational principle which is a quadratic in the function derivatives is described. The minimization is with respect to the (possibly vector-valued) function at the nodes, and also with respect to the nodal positions and the connectivity of the mesh. The elements are linear triangles, the mesh is automatically generated, and may be locally refined if a user-supplied refinement criterion is satisfied. The problem domain may have arbitrary shape, but must have the topology of a disk, and either Dirichlet or Neumann conditions may be specified at each point of the boundary. An example is given of a problem from elasticity theory.

46966 **(DOE/ER/25009—443) Benchmarking the Connection Machine.** Baillie, C.; Felten, E.; Walker, D. (California Inst. of Tech., Pasadena (USA)). [1987]. Contract FG03-85ER25009. 9p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013500.

The purpose of this memo is to present the results of work done recently on the Connection Machine during a one-week visit by the authors to Thinking Machines Corporation. The main objectives of the trip were to benchmark the Connection Machine and to assess the software environment, in order to determine the suitability of the Connection Machine for solving computationally-intensive problems and to compare the Connection Machine with other highly-parallel computers. This report presents preliminary results, and describes the computer architecture.

46967 **(DOE/ER/25026—9) Implementation of preconditioned s-step Conjugate Gradient methods on a multiprocessor system with memory hierarchy.** Chronopoulos, A.T.; Gear, C.W. (Illinois Univ., Urbana (USA). Dept. of Computer Science). Aug 1987. Contract FG02-87ER25026. 30p. (UIUCDCS-R—87-1347; UILU-ENG—87-1750). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014401.

Multiprocessor architectures combining vector and parallel processing capabilities on a two-level shared memory structure have been implemented. This memory hierarchy structure requires that numerical algorithms possess good data locality in order to achieve high performance rates. The s-step Conjugate Gradient method is a generalization of the classical method with improved data locality and parallel properties. Numerical experiments on a multiprocessor with memory hierarchy show the superiority in performance of the s-step methods to their one-step counterparts.

46968 **(FNAL/C—87/93) The VAXONLINE software system at Fermilab.** White, V.; Heinicke, P.; Berman, E.; Constanta-Fanourakis, P.; MacKinnon, B.; Moore, C.; Nicinski, T.; Petravick, D.; Pordes, R.; Quigg, L. (Fermi National Accelerator Lab., Batavia, IL (USA)). Jun 1987. Contract AC02-76CH03000. 6p. (CONF-870552—23). NTIS, PC A02. File Number DE87013565.

From 5. conference on real-time computer applications in nuclear, particle, and plasma physics; San Francisco, CA, USA (11 May 1987).

The VAXONLINE software system, started in late 1984, is now in use at 12 experiments at Fermilab, with at least one VAX or MicroVax. Data acquisition features now provide for the collection and combination of data from one or more sources, via a list-driven Event Builder program. Supported sources include CAMAC, FASTBUS, Front-end PDP-11's, Disk, Tape, DECnet, and other processors running VAXONLINE. This paper describes the functionality provided by the VAXONLINE system, gives performance figures, and discusses the ongoing program of enhancements.

46969 **(FNAL/Pub—87/105-A) Wilson loop instantons.** Lee, K.; Holman, R.; Kolb, E.W. (Fermi National Accelerator Lab., Batavia, IL (USA); Carnegie-Mellon Univ., Pittsburgh, PA (USA). Dept. of Physics). Jun 1987. Contract AC02-76CH03000. 10p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013480.

Wilson Loop symmetry breaking is considered on a spacetime of the form $M_4 \times K$, where M_4 is a four dimensional spacetime and K is an internal space with non-trivial and finite fundamental group. We show in a simple model that the different vacua obtained by breaking a non-Abelian gauge group by Wilson loops are separated in the space of gauge potentials by a finite energy barrier. An interpolating gauge configuration between these vacua has been constructed and it has been shown to have minimum energy. Finally, some implications of this construction are discussed.

46970 **(HD-PY—87/05) Behaviour at unit argument of the hypergeometric function /sub 3/F/sub 2/.** Buehring, W. (Heidelberg Univ. (Germany, F.R.). Physikalisches Inst.). 1987. 15p. Heidelberg Univ., Germany, F.R. Physikalisches Inst. .

The behavior at z=1 of the generalized hypergeometric function /sub 3/F/sub 2/(a,b,c;e,f;z) is investigated. First the analytic continuation near z=1 is obtained for the general case when s=e+f-a-b-c is not equal to an integer. The corresponding continuation formulas for the special cases when s is equal to an integer are then derived by appropriate limiting processes. When f=c or e=c, the formulas immediately reduce to the well-known continuation formulas of the Gaussian hypergeometric function.

46971 **(KFKI—1986-96/A) Monte Carlo method and its application in the experimental particle physics.** Manno, I. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Dec 1986. 85p. (In Hungarian). NTIS (US Sales Only), PC A05/MF A01. File Number DE87703120.

This article describes the basic principles of the Monte Carlo method. After a brief summary of the used concepts and results of the probability theory and after introducing the important discrete and continuous probability distributions, the problem of random number generation is discussed in detail. Different methods of random number generation are presented with examples in computer codes. The transformation of the primer homogeneous distribution to other, e.g. Gauss exponential or multidimensional ones is discussed. The application of the Monte Carlo method in particle physics is illustrated by some examples related to neutron absorption and to the reliability of laboratory equipment. An important application field of the MC method is the numerical evaluation of definite integrals. Some methods fastening the convergence are discussed. An example is worked out in detail: the determination of effectivity of a detection system, designed for the detection of kaon-proton interaction. The computer code of the MC program is added. (D.Gy.). 7 refs.; 30 figs.

46972 **(KFKI—1987-03/G) Dynamic studies in the primary coolant circuits Pt. 1/I. Computerized analysis of the simultaneous drop-out of 6 major pumps based on experiments at a high-pressure loop 'PMK-NHV'.** Szabados, L.; Ezsoel, Gy.; Perneczky, L. (Hungarian Academy of Sciences, Budapest. Central Research Inst. for Physics). Jan 1987. 69p. (In Hungarian). NTIS (US Sales Only), PC A04/MF A01. File Number DE87703123.

The theoretical works related to the experiment performed on the PMK-NHV high-pressure water cooled loop of the CRIP modelling the total loss of flow in the Paks NPP are presented. The pre-test analysis with the RELAP4/mod6 code, the evaluation of the measured thermohydraulic data, the interpretation of the results and the post-test calculation are summarized. 7 refs.; 49 figs.; 6 tables.

46973 **(LA—10855-MS) ICS: An implicit Compton-Fokker-Planck Solver.** Morel, J.E. (Los Alamos National Lab., NM (USA)). Sep 1987. Contract W-7405-ENG-36. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014208.

A computer software package for solving the time evolution equations for the electron temperature, ion temperature, and multigroup radiation densities resulting from Compton-Fokker-Planck scattering is described.

46974 **(LA—10920-MS) Computer modeling of metal forming.** Korzekwa, D.A.; Guerra, F.M.; Follansbee, P.S.; Stout, M.G. (Los Alamos National Lab., NM (USA)). Sep 1987. Contract W-7405-ENG-36. 85p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87013804.

A program to develop the capability to model metal forming operations is in progress. Two forming operations were chosen as model problems for evaluating the accuracy of existing codes and determining their applicability for these types of problems. Detailed inspection of the parts produced by these operations supplied experimental results for comparison with the model. The material chosen for study, 304L stainless steel, was characterized to provide material properties for the study. The operations were modeled with two different finite element codes - ADINA78 and NIKE2D. The results indicate that forming operations where friction is not important can be modeled with reasonable accuracy for isotropic materials. The results for a thin sheet problem indicate that when friction is a dominant factor the existing codes have deficiencies that can cause large errors. In the course of this investigation a new friction model that seems to offer some improvement was implemented in both codes. 34 refs., 53 figs., 3 tabs.

46975 **(LA—11025-M) A reference guide for IGVIEW, an IGES-compatible [Initial Graphics Exchange Specification] geometry system.** Dolin, R.M.; Jaeger, D.L. (Los Alamos National Lab., NM (USA)). Aug 1987. Contract W-7405-ENG-36. 128p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87013441.

This report provides an introduction to the Initial Graphics Exchange Specification (IGES)-compatible code called IGVIEW. This software is used to display, edit, and analyze two-dimensional IGES formatted geometry. IGVIEW was written to comply with IGES Version 4.0, which is the current national geometry standard. This report is intended to serve as a reference manual for IGVIEW users. It contains a description of all possible commands and how to execute them. It details how to execute the code, read in a geometry file, and write a geometry file. There is also a discussion about what types of computer systems and terminals the current version of IGVIEW will support. The procedures for developing a material library are shown, and a short example library is provided.

46976 **(LA—11068-M) Configuration and operation of a PC-based waveform scroller/data acquisition system.** Pillay, G.; Cokal, E.J. (Los Alamos National Lab., NM (USA)). Sep 1987. Contract W-7405-ENG-36. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE87014221.

The DATAQ Instruments WFS-200PC Waveform Scroller Card is a plug-in board for IBM personal computers and compatibles, providing display, recording, and storage functions for up to eight channels of input from voltage sources such as laboratory instruments, thermocouples, etc. It is in effect an eight-channel replacement for a strip chart recorder. By using the WFS-200 with any of a large number of supported analog/digital converter (ADC) boards, data can be recorded digitally in the supporting computer's RAM or mass storage. This report describes a user-configured system, consisting of the MetraByte DAS-8 board, the DATAQ Waveform Scroller Card, and DATAQ's Computer-Based Oscillograph and Data Acquisition System (CODAS) software, which may be used with any instruments that generate analog output to display, scale, and record these waveforms in real time with a single computer, using no complicated programming syntax.

46977 **(LA-UR—87-1860) Electronic authoring tools.** Hurford, J.M. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 4p. (CONF-871086—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE87011797.

From Institute of Electrical and Electronic Engineers Professional Communication Society conference; Winnipeg, Canada (14 Oct 1987).

More than a decade ago, word processing software revolutionized the way documents were prepared, and productivity was increased. But the editing and formatting capabilities of most word processors did very little to prevent errors in spelling, typing, grammar, diction, style, or organization from slipping through to the final documents. In the past few years, the number of software tools that aid the author has increased substantially. They now vary in scope from simple spelling checkers to sophisticated diction analyzers and idea processors. Moreover, writing-aid-software described in this report is now available for many types of computing systems, including personal computers, scientific workstations, and mainframes. The various pieces of software can be used in interactive or non-interactive (batch) modes.

46978 **(LA-UR—87-2367) Modeling shockwave deformation via molecular dynamics.** Holian, B.L. (Los Alamos National Lab., NM (USA)). 1987. Contract W-7405-ENG-36. 7p. (CONF-870753—46). NTIS, PC A02. File Number DE87013157.

From 5. topical conference of the American Physical Society on shockwaves in condensed matter; Monterey, CA, USA (20 Jul 1987).

Molecular dynamics (MD), where the equations of motion of up to thousands of interacting atoms are solved on the computer, has proven to be a powerful tool for investigating a wide variety of nonequilibrium processes from the atomistic viewpoint. Simulations of shock waves in three-dimensional (3D) solids and fluids have shown conclusively that shear-stress relaxation is achieved through atomic rearrangement. In the case of fluids, the transverse motion is viscous, and the constitutive model of Navier-Stokes hydrodynamics has been shown to be accurate - even on the time and distance scales of MD experiments. For strong shocks in solids, the plastic flow that leads to shear-stress relaxation in MD is highly localized near the shock front, involving a slippage along close-packed planes. For shocks of intermediate strength, MD calculations exhibit an elastic precursor running out in front of the steady plastic wave, where slippage similar in character to that in the very strong shocks leads to shear-stress relaxation. An interesting correlation between the maximum shear stress and the Hugoniot pressure jump is observed for both 3D and fluid shockwave calculations, which may have some utility in modeling applications. At low shock strengths, the MD simulations show only elastic compression, with no permanent transverse atomic strains. The result for perfect 3D crystals is also seen in calculations for 1D chains. It is speculated that, if it were practical, a very large MD system containing dislocations could be expected to exhibit more realistic plastic flow for weak shock waves, too.

46979 **(LA-UR—87-2602) A methodology for fabrication of intelligent discrete-event simulation models.** Morgeson, J.D.; Burns, J.R. (Los Alamos National Lab., NM (USA); Texas Tech Univ., Lubbock (USA). Coll. of Business Administration). 1987. Contract W-7405-ENG-36. 7p. (CONF-8710124—2). NTIS, PC A02. File Number DE87013177.

From Conference on systems, man, and cybernetics; Alexandria, VA, USA (20 Oct 1987).

In this article a meta-specification for the software requirements and design of intelligent discrete next-event simulation models has been presented. The specification is consistent with established practices for software development as presented in the software engineering literature. The specification has been adapted to take into consideration the specialized needs of object-oriented programming resulting in the actor-centered taxonomy. The heart of the meta-specification is the methodology for requirements specification and design specification of the model. The software products developed by use of the methodology proposed herein are at the leading edge of technology in two very synergistic disciplines - expert systems and simulation. By incorporating simulation concepts into expert systems a deeper reasoning capability is obtained - one that is able to emulate the dynamics or behavior of the object system or process over time. By including expert systems concepts into simulation, the capability to emulate the reasoning functions of decision-makers involved with (and subsumed by) the object system is attained. In either case the robustness of the technology is greatly enhanced.

46980 **(RFP—4090) Color graphics on programmable logic control systems.** Brown-Vanhoozer, S.A. (Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant). 1987. Contract AC04-76DP03533. 11p. (CONF-871028—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011052.

From Instrument Society of America international conference and exhibit; Anaheim, CA, USA (5 Oct 1987).

Color graphics in Progammable Logic Control (PLC) based systems allow the operator and engineer to monitor or control industrial processes from either local or remote consoles. Since a number of color graphic packages are currently available for PLC interfacing, an evaluation was conducted to determine which color graphics package to select. This paper discusses key elements of the selection process.

46981 **(SAND—86-2384C) A design methodology for the utilization of metrics within various phases of software lifecycle models.** Pollock, G.M.; Sheppard, S. (Sandia National Labs., Albuquerque, NM (USA); Texas A and M Univ., College Station (USA). Dept. of Computer Science). 1987. Contract AC04-76DP00789. 22p. (CONF-871081—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87010519.

From 11. annual international computer software and applications conference; Tokyo, Japan (5 Oct 1987).

A design methodology for implementing an automatable set of elementary measures that can be used in constructing composite or hybrid software metric prototypes is presented. Metric kernel primitives developed with this methodology are utilized to construct new hybrid metrics that can be applied to programs implemented in different languages and to various phases of software lifecycle models. The primary intent of the methodology is to provide a technique and subsequent environment that will enhance research in the metric area. Initial evaluations of the design methodology have investigated the application of software complexity metrics to the maintenance phase of the traditional lifecycle model. Actual primitives have been developed in the Ada/sup TM/ programming language to aid in constructing software complexity metrics. Prototypes of Halstead's metric and McCabe's Cyclomatic Complexity metric were constructed from the primitives to evaluate the design methodology. The prototypes can analyze programs written in either FORTRAN or COBOL. An environment to support the design methodology has been defined and is under development.

46982 **(SAND—87-0027) HECTR [Hydrogen Event Containment Transient Response] Version 1.5N: A modification of HECTR Version 1.5 for application to N Reactor.** Camp, A.L.; Dingman, S.E. (Sandia National Labs., Albuquerque, NM (USA)). May 1987. Contract AC04-76DP00789. 174p. (UNI—4332). NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE87012071.

This report describes HECTR Version 1.5N, which is a special version of HECTR developed specifically for application to the N Reactor. HECTR is a fast-running, lumped-parameter containment analysis computer program that is most useful for performing parametric studies. The main purpose of HECTR is to analyze nuclear reactor accidents involving the transport and combustion of hydrogen, but HECTR can also function as an experiment analysis tool and can solve a limited set of other types of containment problems. Version 1.5N is a modification of Version 1.5 and includes changes to the spray actuation logic, and models for steam vents, vacuum breakers, and building cross-vents. Thus, all of the key features of the N Reactor confinement can be modeled. HECTR is designed for flexibility and provides for user control of many important parameters, if built-in correlations and default values are not desired.

46983 **(SAND—87-0297) Compilation of network activity logs on a DECnet host.** George, M. (Sandia National Labs., Albuquerque, NM (USA)). Jul 1987. Contract AC04-76DP00789. 52p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE87014308.

Log files are created for all incoming connection requests on a DECnet host. These log files contain connection data such as the requesting source, destination, and throughput. The procedures (referred to as collect software) outlined in this report, were written to collect these log files, to extract the essential information, and to condense the data into one-line records. The two VAX/VMS systems at SNLA that currently run these procedures compile network transaction logs on a weekly basis. This document is intended for VAX/VMS system managers who wish to install, and possibly modify, this software.

46984 **(SAND—87-0452C) An embedded multiprocessor computer for proof-of-principle testing of exploratory systems concepts.** Borgman, C.R.; Dalton, L.J. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 11p. (CONF-8710105—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87012735.

From 6. conference on computers in aerospace; Wakefield, MA, USA (7 Oct 1987).

This paper discusses the SANDAC V multiprocessor embedded computer hardware and software. Its expandable design provides adequate computing power for testing of various proof-of-principle (POP) exploratory system concepts. It is built from state-of-the-art integrated circuits with ASIC glue chips. A powerful software development system, multiprocessor on-board debugger, and a multitasking operating system kernel provide a user friendly software environment to complement the hardware.

46985 **(SAND—87-0700) NOSTRADAMUS programmable translator user's manual and programmer's manual.** Harmon, J.D. (RE/SPEC, Inc., Albuquerque, NM (USA); Sandia National Labs., Albuquerque, NM (USA)). Jul 1987. Contract AC04-76DP00789. 79p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87013414.

One of the disadvantages in using supercomputers to run engineering analysis codes is that the binary files produced on the supercomputer may be incompatible with postprocessing programs running on a different machine. It is therefore necessary to translate these binary files into a form that is readable by the machines used for postprocessing. Described herein is a programmable translator that translates data produced by one of these analysis codes from the binary format of the Cray supercomputer to the functional equivalent for the Digital Equipment Corporation VAX machines. The general usage of this translator is discussed, as well as the programming language for the translator and some of the finer points of the use of this language. Several programming examples are also included.

46986 **(SAND—87-1870C) QUICKSILVER: A 3D, electromagnetic, PIC code.** Seidel, D.B.; Kiefer, M.L.; Coats, R.S.; Siegel, A.L.; Quintenz, J.P. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 4p. (CONF-870947—6). NTIS, PC A02/MF A01; GPO Dep. File Number DE87013013.

From 12. conference on the numerical simulation of plasmas; San Francisco, CA, USA (20 Sep 1987).

QUICKSILVER is a multitasked, finite difference, 3-dimensional, fully relativistic, electromagnetic, particle-in-cell code currently under development at Sandia National Laboratories. It has been developed for current and near-term supercomputers, such as the Cray X-MP/416, which are characterized by large central memories and multiple processors. All grid-related quantities are stored in central memory and particle information may be stored out of memory if there is not sufficient central memory. The problem geometry is generated with a preprocessor and the simulation results are examined with a postprocessor. This report describes pre- and post-processing capabilities of Quicksilver and discusses algorithm development.

46987 **(SAND—87-1941C) Components and cycles of a random function.** DeLaurentis, J.M. (Sandia National Labs., Albuquerque, NM (USA)). 1987. Contract AC04-76DP00789. 12p. (CONF-870833—3). NTIS, PC A02/MF A01; GPO Dep. File Number DE87014155.

From Crypto '87; Santa Barbara, CA, USA (16 Aug 1987).

This investigation examines the average distribution of the components and cycles of a random function. Here we refer to the mappings from a finite set of, say, n elements into itself; denoted by

Γ/sub n/. Suppose the elements of Γ/sub n/ are assigned equal probability, i.e., P(γ) = n/sup -n/γ element of Γ/sub n/. The directed graph that is naturally associated with γ consists of several components, each with a unique cycle. Define X/sub n/(s,t)(γ) as the number of components in γ containing at least the fraction s of the total number of nodes, with the size of each component's cycle not exceeding tn/sup 1/2/. We derive an integral expression for the expected value of X/sub n/(s,t). The average number of components of a given size with cycles of a specified length approximately equals the volume under the graph of the integrand. This expression can be used to estimate the probability that a cycling experiment will detect a small cycle.

46988 **(SAND—87-7063) ESTIM: A parameter estimation computer program: Final report.** Hills, R.G. (New Mexico State Univ., Las Cruces (USA). Dept. of Mechanical Engineering). Aug 1987. Contract AC04-76DP00789. 42p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87013977.

The computer code, ESTIM, enables subroutine versions of existing simulation codes to be used to estimate model parameters. Nonlinear least squares techniques are used to find the parameter values that result in a best fit between measurements made in the simulation domain and the simulation code's prediction of these measurements. ESTIM utilizes the non-linear least square code DQED (Hanson and Krogh [1982]) to handle the optimization aspects of the estimation problem. In addition to providing weighted least squares estimates, ESTIM provides a propagation of variance analysis. A subroutine version of COYOTE (Gartling [1982]) is provided. The use of ESTIM with COYOTE allows one to estimate the thermal property model parameters that result in the best agreement (in a least squares sense) between internal temperature measurements and COYOTE's predictions of these internal temperature measurements. We demonstrate the use of ESTIM through several example problems which utilize the subroutine version of COYOTE.

46989 **(SOL—87-7) Using MINOS [Modular In-core Nonlinear Optimization System] as a subroutine for decomposition.** Entriken, R. (Stanford Univ., CA (USA). Systems Optimization Lab.). Jun 1987. Contract FG03-87ER25028. 93p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE87013086.

This report is intended to provide a detailed knowledge of how MINOS can be used as a subroutine to solve optimization subproblems. The subproblems can be tasks of a higher order decision making framework. The scope of this paper is limited to the case where the subproblems are linear programs. Extension to the nonlinear case would naturally follow the same line of work done for the linear case. The details of MINOS are presented in three parts: How MINOS Works, a general description of the modules of the MINOS package (each module is treated as a black box which performs some functions independent of the others), MINOS as a Subroutine, details how to set up the data structures of a subproblem in the proper format so that the optimization black box may solve it, and Decomposition with MINOS where nested-dual decomposition is used as a sophisticated example of how to create, modify and solve a sequence of different subproblems. This final part of the report is basically a description of a software package called DECOMP, which acts as a main program calling MINOS as a subroutine.

46990 **(SOL—87-9) The Box Method for linear programming: Part 2, Treatment of problems in standard form with explicitly bounded variables.** Zikan, K.; Cottle, R.W. (Stanford Univ., CA (USA). Systems Optimization Lab.). Jul 1987. Contract FG03-87ER25028. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013072.

A crucial aspect of the Box Method for linear programming is the finding of a "minimum-weight basis" corresponding to a given interior feasible point. This subproblem leads to the formation of the "Box Problem," a special linear program having a closed form solution which provides the search direction at the current iteration. Finding a minimum-weight basis is a matroidal (or, combinatorial) optimization problem that can be handled by a greedy algorithm. This paper suggests a way of efficiently solving the minimum-weight basis problem in cases where the (primal, standard form) linear program contains explicitly bounded variables. It is shown that the main part of the task requires almost no more computational effort or storage space than does a problem of the same size without upper bounded variables. While this result is believed to be valuable in its own right, there is additional benefit to be gained in applications where the finding of a minimum-weight basis (for a linear program without explicit upper bounds on its variables) is done by a special greedy algorithm. Such is the case with minimum-cost network flow problems which will be discussed in Part III of this series.

46991 **(SOL—87-10) Computational behavior of Gauss-Newton methods.** Fraley, C. (Stanford Univ., CA (USA). Systems Optimization Lab.). Aug 1987. Contract FG03-87ER25030. 50p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014486.

This paper is concerned with the numerical behavior of Gauss-Newton methods for nonlinear least-squares problems. Here we assume that the defining feature of a Gauss-Newton method is that the direction from one iterate to the next is the numerical solution of a particular linear least-squares problem, with a steplength subsequently determined by a linesearch procedure. It is well known that Gauss-Newton methods cannot be successfully applied to nonlinear least-squares problems as a class without modification. Our purpose is to give specific examples illustrating some of the difficulties that arise in practice which we believe have not been fully described in the literature.

46992 **(UCID—21056) Praxis: The programming language: An advanced overview.** Greenwood, J.R.; Holloway, F.W.; Morgan, C.R.; Evans, A. Jr. (Lawrence Livermore National Lab., CA (USA)). 6 Aug 1987. Contract W-7405-ENG-48. 30p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014319.

Praxis is an Ada-like programming language developed for efficient programming of embedded control and systems applications. It is strongly typed, and block structured in the tradition of Pascal and Ada, with efficiency and control similar to C. Praxis supports the development of systems composed of separately compiled modules, user defined data types, exception handling, and detailed data storage and control mechanisms. Direct access to machine facilities, efficient bit manipulation, and interlocked critical regions are also provided in Praxis. Praxis has been in operational use since late 1980, and current implementations for the VAX, PDP and LSI-11 computers have been released into the public domain.

46993 **(UCID—21132) RANDOM NUMBER: A syntax-directed package to produce random numbers in user-specified, univariate distributions: User's guide.** Einwohner, T.H.; Shiflet, A.B. (Lawrence Livermore National Lab., CA (USA); Lander Coll., Greenwood, SC (USA)). [1987]. Contract W-7405-ENG-48. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014278.

Statistical simulations are an important tool in scientific work. They yield solutions to problems unobtainable by other means. Moreover, where alternative solutions are possible, statistical simulations often provide greater precision for the same computer cost. A statistical simulation requires the drawing of unbiased random numbers. And this simulation is made more efficient if unbiased, independent random numbers can be drawn from a preassigned distribution. Provided here is an easy-to-use computer program for drawing random numbers from a user-specified, univariate distribution. The user can specify the distribution by giving its algebraic form; conversion to a language like FORTRAN is unnecessary. Another motivation for this work is to develop a syntax-directed, expert system. This package is the first part of an expert system of Monte-Carlo techniques which will in turn become part of an extensive, artificial intelligence expert system hierarchy. This package will draw random numbers from any non-negative function with finite integral over its stated domain. It will decide from a syntactic analysis whether to use special tricks or general methods. Special tricks draw from power, exponential, or Gaussian distributions. Other special tricks allow random numbers to be drawn from sums of these distributions or in some cases linear combinations of

the above distributions. The general method used is the Rejection Method. The Bernstein Method is also available and suitable for tabular data.

46994 **(UCID—21143) BIMOND3: Monotone piecewise bicubic Hermite interpolation code.** Fritsch, F.N.; Carlson, R.E. (Lawrence Livermore National Lab., CA (USA)). Aug 1987. Contract W-7405-ENG-48. 42p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014612.

BIMOND3 is a Fortran program for interpolating bivariate data given on a rectangular mesh. The functional form is piecewise bicubic Hermite (PBH) on the data mesh. Subroutine PBHMD determines the Hermite derivatives so that the monotonicity of the interpolant matches that of the data. There is optional user control over boundary derivatives. Subroutine PBHEV evaluates a PBH function at an arbitrary point. It is used to evaluate the interpolant on a user-specific plotting mesh.

46995 **(UCID—21155) A shape preserving interpolant which has tension controls.** Foley, T.A. (Lawrence Livermore National Lab., CA (USA)). May 1987. Contract W-7405-ENG-48. 37p. NTIS, PC A03. File Number DE87014615.

The monotonicly and convexly constrained (MONCON) weighted v-spline interpolant is presented, which preserves local monotonicity and local convexity of the data. The MONCON weighted v-spline is the C^1 piecewise cubic, whose partition is defined by the data, that minimizes a variational problem subject to monotonicity and convexity constraints. The variational function that is minimized is the same as that minimized by the weighted v-spline, which is a generalization of the C^2 cubic spline, the weighted spline and the v-spline. By minimizing the constrained variational problem, the user not only generates a shape preserving interpolant, but the user can also interactively modify the shape of the curve using tension parameters and still preserve local monotonicity and convexity. An aspect of the work presented here that can apply to other methods is the definition of piecewise monotonicity constraints that vary continuously with respect to the data.

46996 **(UCRL—53808) QN3D: A three-dimensional quasi-neutral hybrid particle-in-cell code with applications to the tilt mode instability in field reversed configurations.** Horowitz, E.J. (Lawrence Livermore National Lab., CA (USA)). 7 Jul 1987. Contract W-7405-ENG-48. 138p. NTIS, PC A07/MF A01; 1; GPO Dep. File Number DE87013409.

The tilt mode instability of a field reversed configurations (FRC) is discussed. Current numerical models do not properly explain the behavior of this mode. A particle-in-cell (PIC) model in cartesian coordinates is introduced with an explanation as to why it represents the physics of FRCs more closely. The model is presented by first simplifying Maxwell's equations using the Darwin limit. A final set of equations are derived by assuming the electrons to be an inertialess fluid with zero temperature. The PIC model is implemented in a FORTRAN code, QN3D. The major elements of this code are presented indicating the many techniques required for its optimization. Many of the major factors in optimization are dependent upon features of the Cray-2 Multiprocessor. Taking advantage of these new features is discussed in the text. Testing of the code is presented in three phases. First, single particle motion is analyzed. Next the normal modes are calculated and simulated. Finally, QN3D is applied to the rigid rotor problem. These tests indicate that the codes is suited to model plasma phenomena in the parameter regimes of interest. Lastly, two cases of the tilt mode problem are attempted. The results match current experiments and confirm initial hypothesis as to why other models are not adequate.

46997 **(UCRL—95810) A preliminary taxonomy of visible surface algorithms.** Grant, C.W. (California Univ., Davis (USA); Lawrence Livermore National Lab., CA (USA)). 10 Dec 1986. Contract W-7405-ENG-48. 5p. (CONF-8704194—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013559.

From Workshop on rendering algorithms and systems graphics; Toronto, Canada (5 Apr 1987).

Visibility determination is shown to be a common reoccurring subproblem in image synthesis. A preliminary taxonomy of visible surface algorithms is developed which is a superset of the taxonomy of Sutherland, Sproull, and Schumacker. Two major extensions are given. First, a three-dimensional structure based on sorting order is discovered for the point sampling class of algorithms. Second, an additional class of continuous sampling algorithms, not covered by Sutherland, Sproull, and Schumacker, is identified. Two main branches in this second class are identified, scan plane and subdivision algorithms.

46998 **(UCRL—95888) Differencing the diffusion equation on a mesh of triangles and quadrilaterals.** Zagotta, W.E.; Braddy, D.M. (Lawrence Livermore National Lab., CA (USA)). 6 Jan 1987. Contract W-7405-ENG-48. 9p. (CONF-8705169—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87011550.

From Nuclear science and engineering conference; Paris, France (1 May 1987).

A finite differencing method has been derived, which is capable of solving the diffusion equation on a Lagrangian mesh consisting of an arbitrary mixture of quadrilaterals and triangles. Results have been presented that show that when run on similar problems, similar performance is achieved compared to other state-of-the-art codes.

46999 **(UCRL—95911) Unified sun and sky illumination for shadows under trees.** Max, N. (Lawrence Livermore National Lab., CA (USA)). 12 Jan 1987. Contract W-7405-ENG-48. 24p. (CONF-870738—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87014232.

From ACM SIGGRAPH conference; Anaheim, CA, USA (27 Jul 1987).

Assume the sun, sky and clouds are represented as a raster image on a plane at infinity, and the shadows of a tree canopy are represented as a raster transparency mask on a canopy plane. Then the illumination on the ground is the correlation of these two rasters, which can be rapidly computed by Fast Fourier Transform techniques.

47000 **(UCRL—96192) EAGLES: An interactive environment for scientific computing.** Lawver, B.S.; O'Brien, D.W.; Poggio, M.E.; Shectman, R.M. (Lawrence Livermore National Lab., CA (USA)). 11 May 1987. Contract W-7405-ENG-48. 5p. (CONF-870552—24). NTIS, PC A02. File Number DE87013564.

From 5. conference on real-time computer applications in nuclear, particle, and plasma physics; San Francisco, CA, USA (11 May 1987).

The EAGLES Project is creating a computing system and interactive environment for scientific applications using object-oriented software principles. This software concept leads to well defined data interfaces for integrating experiments control with acquisition and analysis codes. Tools for building object-oriented systems for user interfaces and codes are discussed. Also the terms of object-oriented programming are introduced and later defined in the appendix. These terms include objects, methods, messages, encapsulation and inheritance.

47001 **Construction of variable-stepsize multistep formulas.** Skeel, R.D. (National Center for Atmospheric Research, Boulder, CO 80307). *Mathematics of Computation;* 47: No. 176, 503-510(Oct 1986).

A systematic way of extending a general fixed-stepsize multistep formula to a minimum storage variable-stepsize formula has been discovered that encompasses fixed-coefficient (interpolatory), variable-coefficient (variable step), and fixed leading coefficient as special cases. In particular, it is shown that the "interpolatory" stepsize changing technique of Nordsieck leads to a truly variable-stepsize multistep formula (which has implications for local error estimation and formula changing), and it is shown that the "variable-step" stepsize changing technique applicable to the Adams and backward-differentiation formulas has a reasonable generalization to the general multistep formula. In fact, it is shown how to construct a variable-order family of variable-coefficient formulas. Finally, it is observed that the first Dahlquist barrier does not apply to adaptable multistep methods if storage rather than stepnumber is the key consideration.

47002 **Numerical solution of second-order boundary value problems on nonuniform meshes.** Manteuffel, T.A.; White A.B. Jr. (National Center for Atmospheric Research, Boulder, CO 80307). *Mathematics of Computation;* **47**: No. 176, 511-535(Oct 1986).

In this paper, we examine the solution of second-order, scalar boundary value problems on nonuniform meshes. We show that certain commonly used difference schemes yield second-order accurate solutions despite the fact that their truncation error is of lower order. This result illuminates a limitation of the standard stability, consistency proof of convergence for difference schemes defined on nonuniform meshes. A technique of reducing centered-difference approximations of first-order systems to discretizations of the underlying scalar equation is developed. We treat both vertex-centered and cell-centered difference schemes and indicate how these results apply to partial differential equations on Cartesian product grids.

47003 **Supra-convergent schemes on irregular grids.** Kreiss, H.; Manteuffel, T.A.; Swartz, B.; Wendroff, B.; White, A.B. Jr. (National Center for Atmospheric Research, Boulder, CO 80307). *Mathematics of Computation;* **47**: No. 176, 537-554(Oct 1986).

As Tikhonov and Samarskii-breve showed for $k = 2$, it is not essential that kth-order compact difference schemes be centered at the arithmetic mean of the stencil's points to yield second-order convergence (although it does suffice). For stable schemes and even k, the main point is seen when the kth difference quotient is set equal to the value of the kth derivative at the middle point of the stencil; the proof is particularly transparent for $k = 2$. For any k, in fact, there is a [k/2]-parameter family of symmetric averages of the values of the kth derivative at the points of the stencil which, when similarly used, yield second-order convergence. The result extends to stable compact schemes for equations with lower-order terms under general boundary conditions. Although the extension of Numerov's tridiagonal scheme (approximating $D^2y = f$ with third-order truncation error) yields fourth-order convergence on meshes consisting of bounded number of pieces in which the mesh size changes monotonically, it yields only third-order convergence to quintic polynomials on any three-periodic mesh with unequal adjacent mesh sizes and fixes adjacent mesh ratios. A result of some independent interest is appended (and applied): it characterizes, simply, those functions of k variables which possess the property that their average value, as one translates over one period of an arbitrary periodic sequence of arguments, is zero; i.e., those bounded functions whose average value, as one translates over arbitrary finite sequences of arguments, goes to zero as the length of the sequences increases.

47004 **(ANL/MCS-TM—94) Maintaining state constraints in relational databases: A proof theoretic basis.** McCune, W.W.; Henschen, L.J. (Argonne National Lab., IL (USA). Mathematics and Computer Science Div.). Jun 1987. Contract W-31109-ENG-38. 27p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE87014329.

If a relational database is required to satisfy a set of integrity constraints, then when the database is updated, one must ensure that it continues to satisfy the constraints. It is desirable not to have to evaluate each constraint after each update. A method is described that takes a constraint C and a class of updates, and either proves that an update in the class cannot violate the C, or produces a formula C′ (a complete test) that is satisfied before the update if and only if the C would continue to be satisfied were the update to occur. C′ is frequently much easier to evaluate than the C. In addition, a formula D (a sufficient test) is sometimes produced such that if D is satisfied before the update, then C would continue to be satisfied were the update to occur. The method is proved correct. The method is substantially more general than other reported techniques for this problem. The method has been implemented, and a number of experiments with the implementation are presented.

47005 **(CONF-870841—3) Knowledge acquisition issues encountered during the development of an estimating expert system.** Albright, K.; Emrich, M.L.; Sadlowe, A.R.; Arrowood, L.; Watson, B.D. (Oak Ridge National Lab., TN (USA)). 14 Aug 1987. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87013320.

From 2. international conference on human-computer interaction; Honolulu, HI, USA (10 Aug 1987).

Artificial Intelligence, in particular expert systems methodologies, is being applied to the US Navy's automated data processing (ADP) project estimating tasks. Skilled Navy project leaders are nearing retirement and replacements may not possess the many years of experience required to make accurate estimating decisions of time, cost, equipment, and personnel needs. Knowledge acquisition has traditionally hindered the building of an expert system. A variety of information gathering techniques is discussed. Methods of interviewing, documenting, and verifying information are described. Project leaders were interviewed to capture their unique estimating expertise. Combining this information revealed fewer redundancies and contradictions than expected. The prototyping of the ADP-Estimator System is presented as part of the knowledge acquisition process.

47006 **(UCRL—93184) The influence of intelligent gateway systems on transborder data flow and international technology transfer.** Bollinger, W.A.; Fisher, H.L.; Gee, J.I.; Hampel, V.E. (Lawrence Livermore National Lab., CA (USA)). Jul 1985. Contract W-7405-ENG-48. 13p. (CONF-8512127—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE87012906.

From 9. international online information meeting; London, UK (3 Dec 1985).

New capabilities in communications technology cause strong differences of opinion in government and industry on how to control electronic data transmission of administrative, scientific, and technical data between countries. Regulations of transborder data flow (TDF) are further complicated by the unprecedented growth of information technology where the development of intelligent gateways and satellite networks span geographic and political boundaries. In this paper the present state of national policy and technology is examined, future trends are explored, and arguments to support opinions that intelligent gateways are the preferred tool for online database searching and analysis are presented. Beginning with an overview of present state-of-the-art systems, the effects of this new technology on transborder data flow are examined.

47007 **(UCRL—96717) Data structure and format conversion using syntactive inference.** Blattner, M.M.; Darmohray, G.A.; Burton, H.D. (California Univ., Davis (USA); Lawrence Livermore National Lab., CA (USA)). May 1987. Contract W-7405-ENG-48. 20p. (CONF-871088—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE87010874.

From COMPSAC '87; Tokyo, Japan (1 Oct 1987).

The provision of useful services and software tools for the users of on-line databases requires the restructuring and reformatting of downloaded information into a standard form. Developing database specific software to do this conversion is time-consuming and requires the services of a programmer/information specialist knowledgeable in the specific formats of the databases involved. In this paper a structure and format conversion tool for bibliographic citation databases that requires no knowledge beyond that of the citation organization in the system to be accessed is described. A user or an information specialist edits a carefully constructed sample provided by our service in the structure of the information to be downloaded. The restructuring and reformatting tool infers the citation structure and creates a grammar to be used by a parser for the translation process.

47008 **Lie-transformed Vlasov action principle: relativistically covariant wave propagation and self-consistent ponderomotive effects.** Kaufman, A.N.; Holm, D.D. (Lawrence Berkeley Lab., CA). *Physics Letters;* vp(Aug 1984). Contract AC03-76SF00098.

A bibliography of recent papers submitted and reports issued from Lawrence Berkeley Laboratory is presented. Subject areas in-

clude: high energy physics, nuclear physics, accelerators, biology, atomic physics and materials.

47009 **(IAEA-INFCIRC—336-Add.1) Convention on assistance in the case of a nuclear accident or radiological emergency.** (International Atomic Energy Agency, Vienna (Austria)). Mar 1987. 3p. NTIS (US Sales Only), PC A02/MF A01. File Number DE87703052.

The document presents the status of signatures and notifications of the Convention on Assistance in the Case of a Nuclear Accident or Radiological Emergency which entered into force on 26 February 1987, i.e. thirty days after the date (26 January 1987) on which the third State expressed its consent to be bound by the Convention. The list of signature, notification, acceptance, approval or accession by States or Organizations is given.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Kinetics and mechanisms of the release of trace inorganic contaminants to ground water from coal ash basins on the Savannah River Plant: Progress report, September 29, 1986-September 30, 1987, 12:46199 (R;US)

Clarkson Univ., Potsdam, NY (USA). Dept. of Chemical Engineering
Simulation and optimization of three-phase distillation processes, 12:45853 (R;US)

Clemson Univ., SC (USA)
Role and behavior of spin in gravitational physics. Final report, 15 May 1986-15 May 1987, 12:46830 (R;US)

CNG Research Co., Pittsburgh, PA (USA)
CNG acid gas removal process: Final report, 12:44839 (R;US)

Coal Research Establishment, Cheltenham (UK)
Vapor and liquid phase hydrotreatment of hydropyrolysis tar with hydrous titanium oxide catalysts, 12:44862 (R;US)

Colorado School of Mines, Golden (USA). Dept. of Physics
Shock-chemistry in natural materials and evolution of planetary surfaces, 12:46381 (R;US)

Colorado State Univ., Fort Collins (USA). Dept. of Botany and Plant Pathology
Tissue-culture investigations into mechanisms of biomass enhancement. Annual report, June 1985-July 1986, 12:45245 (R;US)

Colorado Univ., Boulder, (USA). Cooperative Inst. for Research in Environmental Sciences
On the surging potential of polar ice streams: Antarctic surges: A clear and present danger?, 12:46328 (R;US)

Columbia Univ., New York (USA)
Far infrared observations of crab-like supernova remnants. Final report, 1 June 1985-31 May 1986, 12:46372 (R;US)

Columbia Univ., New York (USA). Dept. of Physics
On the collective variables description of a high gain free electron laser, 12:46002 (R;US)

Columbia Univ., New York (USA). Plasma Physics Lab.
Second regime tokamak operation at large aspect ratio, 12:46848 (R;US)

Commission of the European Communities, Geel (Belgium). Central Bureau for Nuclear Measurements
Annual progress report on nuclear data, 1986, 12:46678 (R;BE)

Commission of the European Communities, Luxembourg
Computer-based coal clearance for a multi-mine complex, 12:44944 (R;XE)
Energy audit No. 6: Chemical industry in the European Economic Community. Summary report, 12:45562 (R;DE)
Evaluation of the Community cost-shared research programme on solar, wind and biomass energy and of the Joint Research Centre's programme on non-nuclear energies (1979-1985), 12:45550 (R;DE)

Commission of the European Communities, Luxembourg. Directorate General Information Market and Innovation
Bruchsal geothermal project. Seismic reflection surveys and their interpretation in view of the Bruchsal 1 and 2 geothermal drilling works, 12:45279 (R;DE;In German)

Commonwealth Scientific and Industrial Research Organization, Mount Waverley (Australia). Div. of Geomechanics
Three-dimensional stress changes in pillars during longwall mining at Ellalong Colliery, 12:44935 (R;AU)

Concawe, The Hague (Netherlands)
Health experience of workers in the petroleum manufacturing and distribution industry, 12:44986 (R;NL)

Construction Technology Labs., Skokie, IL (USA)
Concrete containment tests: Phase 2, Structural elements with liner plates: Interim report, 12:45385 (R;US)

Continuous Electron Beam Accelerator Facility, Newport News, VA (USA)
Superconducting accelerator technology, 12:46056 (R;US)
Superconducting radio frequency technology: Expanding the horizons of physics and technology, 12:46081 (R;US)

Cornell Univ., Ithaca, NY (USA)
Combustion control with smart sensors: Final report for period February 1, 1982-November 30, 1986, 12:45964 (R;US)
Results from the RACE [Ring ACceleration Experiment] Compact Torus Acceleration Experiment, 12:46873 (R;US)

Cornell Univ., Ithaca, NY (USA). Geotechnial Engineering Group
Experimental analysis of drilled shaft foundations subjected to repeated axial loads under drained conditions: Final report, 12:45326 (R;US)

Cornell Univ., Ithaca, NY (USA). School of Chemical Engineering
Molecular theory and computer-simulation studies of natural and synthetic gas mixtures. Final report, January 1, 1983-December 31, 1986, 12:45013 (R;US)

Council for Mineral Technology, Randburg (South Africa). Ore-dressing Div.
The recovery of graphite from borehole-core samples, 12:45977 (R;ZA)

Council for Scientific and Industrial Research, Faure (South Africa). National Accelerator Centre
Calculations to obtain approximate field settings for the injection elements for given sector magnet field settings, 12:46914 (R;ZA)

Council for Scientific and Industrial Research, Pretoria (South Africa)
Fast radioiodination of rose bengal at room temperature, 12:45952 (R;ZA)

Council for Scientific and Industrial Research, Pretoria (South Africa). National Accelerator Centre
Considerations for the initial production of /sup 123/I at the NAC, 12:46650 (R;ZA)

Council for Scientific and Industrial Research, Pretoria (South Africa). National Chemical Research Lab.
Annual report 1986 [from National Chemical Research Lab., South Africa], 12:45851 (R;ZA)

Council of Ministers, Berlin (German Democratic Republic)
Uses of atomic energy for the economic and social development in the German Democratic Republic, 12:46949 (R;DD)

Coyne Solar Mfg. Co., San Juan Pueblo, NM (USA)
Cost reduction of the Sun Challenger (trade mark) batch solar water heater. Final report, 31 March 1986-30 April 1987, 12:45266 (R;US)

D

Danmarks Tekniske Hoejskole, Copenhagen. Lab. for Varme- og Klimateknik
Coal-fueled boilers with a travelling-grate stoker, 12:46044 (R;DK;In Danish)
Danmarks Tekniske Hoejskole, Lyngby. Lab. for Varmeisolering
International Energy Agency solar heating and cooling programme. Task VIII. Passive and hybrid solar low energy buildings. Simulation model validation using test cell data, 12:45263 (R;DK)
Daresbury Lab. (UK)
A study of the structure of ^{162}Dy through the (n,γ) and (n,e$^-$) reactions, 12:46684 (R;US)
Darone, Sandyford (Ireland)
CEC sub-programme of R & D on new energy vectors, 12:44856 (R;XE)
Dartmouth Coll., Hanover, NH (USA)
Thermomechanical effects in high-speed seal rubs. Final report, 26 February 1979-31 December 1984, 12:45979 (R;US)
Decision Focus, Inc., Palo Alto, CA (USA)
TAG Technical Assessment Guide: Volume 4, Fundamentals and methods, end use: Special report, 12:45589 (R;US)
Delaware Univ., Newark (USA). Center for Catalytic Science and Technology
A surface science investigation of potential intermediates, catalysts, and promoters in the synthesis of higher alcohols by metals: Progress report, 12:45208 (R;US)
Denver Univ., CO (USA). Dept. of Chemistry
Physical chemistry of energetic nitrides. Final report, 1 November 1983-30 April 1987, 12:45997 (R;US)
Department of Energy, London (UK). Energy Efficiency Office
Offshore wind-energy resource around the United Kingdom, 12:45297 (R;GB)
Deutscher Kaelte- und Klimatechnischer Verein e.V., Stuttgart (Germany, F.R.)
Report on the 1985 annual meeting of the German Association of Refrigeration and Air-Conditioning Engineering (DKV), 12:45602 (R;DE;In German)
Deutsche Welle, Auslandsfunk der Bundesrepublik Deutschland, Koeln (Germany, F.R.)
Chernobyl reactor accident. A documentation submitted by the Deutsche Welle radio station, 12:45555 (R;DE;In German)
Dominion Engineering, Inc., McLean, VA (USA)
Improved control rod drive handling equipment for BWRs [boiling-water reactors]: Final report, 12:45396 (R;US)
Dornier-System G.m.b.H., Friedrichshafen (Germany, F.R.)
Project-related experiences by Dornier System Company in the field of energy technology, 12:45227 (R;DE;In German)
Dortmund Univ. (Germany, F.R.). Abt. Elektrotechnik
Rapid calculation methods for the management of electric utilities, 12:45687 (R;DE;In German)
Duke Univ., Durham, NC (USA)
Observation of antiproton annihilation in heavy nuclei at 100 GeV/c, 12:46660 (R;US)
Duke Univ., Durham, NC (USA). Dept. of Chemistry
Acid-base properties of coals and other solids: Final report, September 1, 1985 to August 30, 1987, 12:44872 (R;US)
Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA). Savannah River Plant
Controlled, economical and reliable volume measurement system for the laboratory, 12:46126 (R;US)
Greater Confinement Disposal trench and borehole operations status, 12:45121 (R;US)
Performance assessment methods for mixed waste sites at the Savannah River Plant, 12:45120 (R;US)

E

ECC, Inc., San Jose, CA (USA)
Dynamic security assessment for power systems: Research plan: Final report, 12:45313 (R;US)
Ecole Normale Superieure, 75 - Paris (France)
Lattice gas hydrodynamics in two and three dimensions, 12:46479 (R;US)
EG and G Energy Measurements, Inc., Goleta, CA (USA). Santa Barbara Operations
Biological survey of Naval Petroleum Reserve No. 2 (Buena Vista), Kern County, California, 12:46208 (R;US)
EG and G Energy Measurements, Inc., Las Vegas, NV (USA)
Evaluating and testing thermographic phosphors for turbine-engine temperature measurements, 12:45698 (R;US)
EG and G Idaho, Inc., Idaho Falls (USA)
Aging of Class 1E batteries in safety systems of nuclear power plants, 12:45506 (R;US)
An acoustic emission digital data acquisition workstation, 12:46022 (R;US)
EG and G, Inc., Las Vegas, NV (USA). Remote Sensing Lab.
An aerial radiological survey of Areas 12, 15, 17 and 19, Nevada Test Site: Date of survey: October-November 1984, 12:45122 (R;US)
An aerial radiological survey of the White Oak Creek Floodplain, Oak Ridge Reservation, Oak Ridge, Tennessee: Date of survey: September-October 1986, 12:45151 (R;US)
EG and G/Washington Analytical Services Center, Inc., Morgantown, WV (USA)
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Electricite de France, 78 - Chatou
Functional consistency checking module for signal validation: Topical report, 12:45384 (R;US)
Electricity Council Research Centre, Capenhurst (UK)
Analysis of the consumption of electrically heated hot water in houses, 12:45605 (R;GB)
Consumption profiles for gas and oil heated hot water in houses and a comparison of usage patterns with electrically heated water, 12:45606 (R;GB)
Health problems associated with air conditioning: a study tour of the USA, 12:46326 (R;GB)
Industrial heat pumps, 12:45603 (R;GB)
Steam heat pump for increasing the energy efficiency in distillation, 12:45607 (R;GB)
Trace heating of domestic hot water pipework, 12:45604 (R;GB)
Electric Power Engineers Association, Chertsey (UK)
Public or private electricity - the American experience. A report from the fact-finding team, 12:45534 (R;GB)
Electric Power Research Inst., Palo Alto, CA (USA)
1987 symposium on stationary combustion nitrogen oxide control: Volume 1, 12:45322 (R;US)
1987 symposium on stationary combustion nitrogen oxide control: Volume 2, 12:45323 (R;US)
Acoustic emission monitoring of cracks in fossil fuel boilers: Final report, 12:45311 (R;US)
Advanced core-monitoring framework: Computer code manual, 12:45393 (R;US)
Bubble formation in transformers: Final report, 12:45328 (R;US)
Calcium spray dryer waste management: Design guidelines: Final report, 12:44885 (R;US)
Coal markets and utilities' compliance decisions: Final report, 12:44963 (R;US)
Compact analyzer for BWR [Boiling Water Reactor] applications: Final report, 12:45395 (R;US)
Concrete containment tests: Phase 2, Structural elements with liner plates: Interim report, 12:45385 (R;US)
Demonstration of a high-efficiency steam reformer for fuel cell power plant applications, 12:45596 (R;US)
Dynamic security assessment for power systems: Research plan: Final report, 12:45313 (R;US)
Electrotechnologies: Potential for improving manufacturing productivity: Final report, 12:45566 (R;US)
Evaluation of an acoustic resonance temperature sensor for transformers: Final report, 12:45327 (R;US)
Evaluation of the toxicity characteristic leaching procedure (TCLP) on utility wastes: Final report, 12:44886 (R;US)

Experimental analysis of drilled shaft foundations subjected to repeated axial loads under drained conditions: Final report, 12:45326 (R;US)
Fossil plant inspections conference: Proceedings, 12:45312 (R;US)
Fuel processor development for multimegawatt fuel cell power plants, 12:45597 (R;US)
Improved control rod drive handling equipment for BWRs [boiling-water reactors]: Final report, 12:45396 (R;US)
Inorganic and organic constituents in fossil fuel combustion residues: Volume 1, A critical review, 12:44887 (R;US)
Inorganic and organic constituents in fossil fuel combustion residues: Volume 2, An annotated bibliography, 12:44888 (R;US)
Intergranular attack of alloy 600 tubing: Simulation tests: Interim report, 12:45341 (R;US)
Lithium/iron sulfide batteries: Development and demonstration, 12:45521 (R;US)
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)
Optical power line voltage and current measurement systems: Volume 1, Limits to the precision of electro-optic and magneto-optic sensors: Final report, 12:45329 (R;US)
Probes for corrosion-related variables in LWR coolant: Interim report, 12:45340 (R;US)
Radiation protection management program at TMI-2 [Three Mile Island]: Noteworthy practices and accomplishments: Final report, 12:45479 (R;US)
Radon as an in situ tracer in geothermal reservoirs: Final report, 12:45278 (R;US)
Reactive power management device assessment: Final report, 12:46029 (R;US)
Remedial technologies for leaking underground storage tanks: Final report, 12:44996 (R;US)
Rheology of coal-water slurries at elevated temperatures for gasification: Final report, 12:44875 (R;US)
Risk assessment of toxic emissions: Alternative models and practices: Final report, 12:46307 (R;US)
Selected papers on priority service methods, 12:45590 (R;US)
Spent fuel storage technical exchange, 12:45092 (R;US)
TAG Technical Assessment Guide: Volume 4, Fundamentals and methods, end use: Special report, 12:45589 (R;US)
Utility machinery vibration monitoring guide: Final report, 12:45394 (R;US)
Wastewater reuse as cooling-tower makeup: Final report, 12:45685 (R;US)
Water management in ash-handling systems: Final report, 12:45324 (R;US)

Electric Power Research Inst., Palo Alto, CA (USA). Energy Management and Utilization Div.
TAG Technical Assessment Guide: Volume 4, Fundamentals and methods, end use: Special report, 12:45589 (R;US)

Empresa Nacional de Energia Electrica, Tegucigalpa (Honduras)
Geology of Platanares geothermal area, Copan, Honduras, 12:45276 (R;US)
Geothermal corehole drilling and operations, Platanares, Honduras, Central America, 12:45280 (R;US)
Stratigraphy, temperature profiles, and flow test data from the PLTG-1 and PLTG-2 coreholes, platanares geothermal system, Honduras, 12:45282 (R;US)

High dose uranium ion implantation into silicon, 12:46741 (R;US)
Measurements of electron excitation and recombination for Ne-like Ba^{46+}, 12:46433 (R;US)
Nuclear Science Division: Annual report for the period October 1, 1985-September 30, 1986, 12:46649 (R;US)
Numerical modeling of isothermal and nonisothermal flow in unsaturated fractured rock: A review, 12:45138 (R;US)
Optical second harmonic generation from Langmuir-type molecular monolayers, 12:46740 (R;US)
Performance comparisons of low emittance lattices, 12:46426 (R;US)
Probing the W-Z-Higgs sector of electroweak gauge theories at the superconducting super collider, 12:46611 (R;US)
Projection-space iterative interpolation for limited-angle tomography in parallel- and fan-beam geometry: Part 1, 12:46256 (R;US)
Reactive scattering of electronically excited alkali atoms with molecules, 12:46427 (R;US)
Second-harmonic and sum-frequency generation for surface studies, 12:46742 (R;US)
Semiconductor detector performance for low-energy x-rays, 12:46130 (R;US)
Summary of Working Group on Storage Ring Collective Effects, 12:46068 (R;US)
The Beam Line X NdFe-steel hybrid wiggler for SSRL, 12:46092 (R;US)
The geothermal program at Lawrence Berkeley Laboratory, 12:45290 (R;US)
The impact of new computer technology on accelerator control, 12:46060 (R;US)
Theory and applications of maps on SO(3) in nuclear magnetic resonance, 12:46129 (R;US)
Lawrence Livermore National Lab., CA (USA)
A finite element model for induction heating of a metal crucible, 12:46782 (R;US)
A preliminary taxonomy of visible surface algorithms, 12:46997 (R;US)
A relativistic Monte Carlo binary collision model for use in plasma particle simulation codes, 12:46867 (R;US)
A shape preserving interpolant which has tension controls, 12:46995 (R;US)
A simple self-breaking 2 MV gas switch, 12:46010 (R;US)
Alarm points for fixed oxygen monitors, 12:46930 (R;US)
Anti-abrasion protection with highly organized materials, 12:45821 (R;US)
BIMOND3: Monotone piecewise bicubic Hermite interpolation code, 12:46994 (R;US)
Coal reactivity measurements, 12:44879 (R;US)
Compact torus studies: Final report, 12:46870 (R;US)
Component Fragility Research Program: Phase 1, Demonstration tests: Volume 1, Summary report, 12:45509 (R;US)
Component Fragility Research Program: Phase 1, Demonstration tests: Volume 2, Appendices, 12:45510 (R;US)
Damage resistance and crystal growth of KDP [potassium dihydrogen phosphate], 12:46781 (R;US)
Data structure and format conversion using syntactive inference, 12:47007 (R;US)
Description of a multiframe optical probing system, 12:45987 (R;US)
Detection of changes in the global troposphere temperature field induced by greenhouse gasses, 12:46181 (R;US)
Differencing the diffusion equation on a mesh of triangles and quadrilaterals, 12:46998 (R;US)
Dipole strength functions in the actinide mass region, 12:46679 (R;US)
EAGLES: An interactive environment for scientific computing, 12:47000 (R;US)
Effects of barrel joints on hypervelocity projectiles, 12:45986 (R;US)
Evidence for bimodal fission in the heaviest elements, 12:46680 (R;US)
Exact solutions to the governing dynamic equations of plasma armature electromagnetic railguns, 12:45984 (R;US)
Excavation of the Partial Seam CRIP underground coal gasification test site, 12:44863 (R;US)
Experimental results from TMX-U, 12:46871 (R;US)

Formation of metastable structures and amorphous phases in Pu-based systems using the triode sputtering technique, 12:45739 (R;US)
Gallium arsenide integrated optical devices for high-speed diagnostic systems, 12:46124 (R;US)
Health risk assessment of tetrachloroethylene (PCE) in California drinking water, 12:46319 (R;US)
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
High resolution seismic attenuation tomography at Medicine Lake Volcano, California, 12:46335 (R;US)
"Hot spots": Subnanometer femtosecond energy localization, 12:46780 (R;US)
Hydrogeologic investigation, Lawrence Livermore National Laboratory Site 300, Pit 6, 12:46236 (R;US)
Installation of and experience with a new standard criticality alarm system, 12:45513 (R;US)
Institute of Geophysics and Planetary Physics at Lawrence Livermore National Laboratory: 1986 annual report, 12:46334 (R;US)
Integral measurements and calculations of neutron and gamma-ray emission at 14 MeV and an overview of the new multi-user tandem at LLNL, 12:46932 (R;US)
Laser Program annual report, 1985, 12:46919 (R;US)
Laser-driven instabilities in long scalelength plasmas, 12:46928 (R;US)
Laser-plasma-interaction experiments using multikilojoule lasers, 12:46931 (R;US)
Lawrence Livermore National Laboratory: Transportation and vehicle utilization study, 12:45670 (R;US)
LIGHT: A ray tracing code to simulate light collection in scintillation spectrometers and light pipes, 12:46120 (R;US)
Linear emittance damper with megagauss fields, 12:46093 (R;US)
Locating parallel numerical tasks in the solution of viscous fluid flows, 12:46481 (R;US)
Magnetic field diagnostics for an FEL [free-electron laser] wiggler, 12:46009 (R;US)
Magnetic mirror fusion systems: Characteristics and distinctive features, 12:46933 (R;US)
Measurements of electron excitation and recombination for Ne-like Ba^{46+}, 12:46433 (R;US)
Microstability of the TMX tandem mirror experiments, 12:46872 (R;US)
Models of high spatial frequency thermal blooming instabilities, 12:45966 (R;US)
Nitrogen at high pressure, 12:45823 (R;US)
Non-thermal AGN models, 12:46382 (R;US)
On the relational modeling of discrete PDE problems, 12:46963 (R;US)
Optical damage in polymers by millisecond light pulses, 12:46929 (R;US)
Particle in cell simulations of disruption, 12:46072 (R;US)
Post-test thermal calculations and data analyses for the Spent Fuel Test, Climax, 12:45141 (R;US)
Praxis: The programming language: An advanced overview, 12:46992 (R;US)
Precipitation kinetics option for the EQ6 geochemical reaction path code, 12:46339 (R;US)
Preliminary report of the past and present uses, storage, and disposal of hazardous materials at the Lawrence Livermore National Laboratory, 12:45140 (R;US)
Production of NO by galactic cosmic rays and lightning, 12:46403 (R;US)
Programmable 10 MHz optical fiducial system for hydrodiagnostic cameras, 12:46133 (R;US)
QN3D: A three-dimensional quasi-neutral hybrid particle-in-cell code with applications to the tilt mode instability in field reversed configurations, 12:46996 (R;US)
Railgun development for EOS [equation-of-state] applications: A status report, 12:45988 (R;US)
RANDOM NUMBER: A syntax-directed package to produce random numbers in user-specified, univariate distributions: User's guide, 12:46993 (R;US)
Response of helical structures to high speed pulses or when can a helix be called an inductor?, 12:46036 (R;US)
Results from the RACE [Ring ACceleration Experiment] Compact Torus Acceleration Experiment, 12:46873 (R;US)
Rheological and aging characterization of elastomers, 12:45822 (R;US)
Special targets for nuclear reaction and spectroscopic studies, 12:46672 (R;US)
Status of the solar and infrared radiation submodels in the LLNL 1-D and 2-D chemical-transport models, 12:46180 (R;US)
Streamlined Darwin methods for particle beam injectors, 12:46434 (R;US)
Studies on temporal field emission from stainless steel surfaces: Final report, April 30, 1987 to June 30, 1987, 12:46091 (R;US)
Synergism of electroplating and vacuum processes, 12:45738 (R;US)
Tactical Vulnerability Assessment Training Program, 12:45168 (R;US)
The Beam Line X NdFe-steel hybrid wiggler for SSRL, 12:46092 (R;US)
The dissociation of dense liquid nitrogen and shock cooling, 12:46784 (R;US)
The equation of state of PETN detonation products, 12:46153 (R;US)
The Hazardous Material Technician Apprenticeship Program at Lawrence Livermore National Laboratory, 12:46200 (R;US)
The influence of intelligent gateway systems on transborder data flow and international technology transfer, 12:47006 (R;US)
Theoretical atomic and molecular photophysics, 12:46432 (R;US)
Theory of multiphoton ionization, 12:46435 (R;US)
Three phase carbon EOS model with electronic excitation, 12:46783 (R;US)
Unified sun and sky illumination for shadows under trees, 12:46999 (R;US)
US energy flow, 1986, 12:45536 (R;US)
Use of polarimetry to measure the current profile in MTX, 12:46869 (R;US)
Why linear Birch and U/sub s/-U/sub p/ expansions work, 12:46785 (R;US)

Lawton and Associates, Santa Fe, NM (USA)
Vapor mass ratio measurements in geothermal production wells, 12:45283 (R;US)

Lehigh Univ., Bethlehem, PA (USA). Dept. of Chemistry
Partial oxidation of light alkanes in transition-metal ion containing zeolites, 12:44855 (R;US)
The macromolecular chemistry of coalification: Quarterly report for the period May 1, 1987-July 31, 1987, 12:44869 (R;US)

Levy (S.), Inc., Campbell, CA (USA)
Compact analyzer for BWR [Boiling Water Reactor] applications: Final report, 12:45395 (R;US)

Liverpool Univ. (UK). Dept. of Materials Science and Engineering
Observations of localized grain boundary dislocations in series of [001] and [110] symmetrical tilt boundaries in aluminum, 12:45717 (R;US)

Lockheed Missiles and Space Co., Palo Alto, CA (USA)
Effect of tertiary hydrogens on the stability of an ionic membrane in a chemically aggressive environment, 12:45817 (R;US)

Los Alamos National Lab., NM (USA)
A high-power rf linear accelerator for FELS [free-electron lasers], 12:46059 (R;US)
A methodology for fabrication of intelligent discrete-event simulation models, 12:46979 (R;US)
A new method for determining fluid flow paths during hydraulic fracturing, 12:44981 (R;US)
A reference guide for IGVIEW, an IGES-compatible [Initial Graphics Exchange Specification] geometry system, 12:46975 (R;US)
A search for the C-noninvariant decay π^0 yields 3γ, 12:46591 (R;US)
A simulation model for material accounting systems, 12:45163 (R;US)
A study of diverging detonation in high-explosive systems, 12:46148 (R;US)
A tracer-based model for heat transfer in a hot dry rock reservoir, 12:45277 (R;US)
Advancing instrumentation and control at the Nevada Test Site: An incremental approach toward a global solution, 12:46128 (R;US)
Antiprotons are another matter, 12:46828 (R;US)
Applications of a downhole programmable microprocessor for a geothermal borehole inspection tool, 12:45284 (R;US)
Applications of molten salts in plutonium processing, 12:45083 (R;US)
Chemical and isotopic characteristics of thermal fluids in the Long Valley caldera lateral flow system, California, 12:45281 (R;US)
Collectivity in composite fragment emission from relativistic heavy ion collisions, 12:46676 (R;DE)

Complex scattering dynamics and the integer quantum Hall effect, 12:46736 (R;US)
Computer modeling of metal forming, 12:46974 (R;US)
Configuration and operation of a PC-based waveform scroller/ data acquisition system, 12:46976 (R;US)
Conversion of borehole Stoneley waves to channel waves in coal, 12:44933 (R;US)
Critical dimensions of systems containing ^{235}U, ^{239}Pu, and ^{233}U: 1986 Revision, 12:45380 (R;US)
Developing hot dry rock reservoirs with inflatable open hole packers, 12:45288 (R;US)
Different ways of looking at the electromagnetic vacuum, 12:46827 (R;US)
Dimension densities for turbulent systems with spatially decaying correlation functions, 12:46477 (R;US)
Elastic moduli of copper under compression, 12:45728 (R;US)
Electronic authoring tools, 12:46977 (R;US)
Evaluating and testing thermographic phosphors for turbine-engine temperature measurements, 12:45698 (R;US)
Experimental molecular spectroscopy in shock-compressed materials, 12:46738 (R;US)
Fissile material storage vaults: Designing to enhance safety and efficiency, 12:45089 (R;US)
Geology of Platanares geothermal area, Copan, Honduras, 12:45276 (R;US)
Geothermal corehole drilling and operations, Platanares, Honduras, Central America, 12:45280 (R;US)
High explosive simulations of supernovae and the supernova shell fragmentation model of solar system formation, 12:46367 (R;US)
ICS: An implicit Compton-Fokker-Planck Solver, 12:46973 (R;US)
Identification of MHF [massive hydraulic fracturing] fracture planes and flow paths: A correlation of well log data with patterns in locations of induced seismicity, 12:45287 (R;US)
IR laser excitation in molecules: Chaos and diffusive energy growth, 12:46424 (R;US)
Isotope and Nuclear Chemistry Division annual report FY 1986, October 1985-September 1986, 12:45957 (R;US)
Lattice gas hydrodynamics in two and three dimensions, 12:46479 (R;US)
Lofting of dust by very large explosions, 12:46147 (R;US)
Machining lead wafers, 12:45727 (R;US)
Method for single-shot measurement of picosecond laser pulse-lengths without electronic time dispersion, 12:46008 (R;US)
Modeling shockwave deformation via molecular dynamics, 12:46978 (R;US)
On the rf surface resistance of the perovskite superconductors at 3 GHz, 12:46806 (R;US)
Phase dynamics: A review and a perspective, 12:46480 (R;US)
PIC [Particle-in-Cell] and its progeny, 12:46478 (R;US)
Pion charge exchange and nuclear structure: II, Nuclear structure calculation, 12:46686 (R;US)
Primer on coupling collective electronic oscillations to nuclei, 12:46826 (R;US)
Progress at LAMPF [Los Alamos Meson Physics Facility]: Progress report, January-December 1986, 12:46058 (R;US)
Quantum-mechanical aspects of classically chaotic driven systems, 12:46425 (R;US)
Radiation-induced transient attenuation of optical fibers at 800 and 1300 nm, 12:45812 (R;US)
Rarefaction velocities in shocked lead, 12:46739 (R;US)
Redrilling of well EE-3 at the Los Alamos National Laboratory HDR [Hot Dry Rock] project, 12:45289 (R;US)
Review of international geothermal activities and assessment of US industry opportunities: Summary report, 12:45274 (R;US)
Sideband suppression by an intracavity optical filter in the Los Alamos free-electron laser oscillator, 12:46007 (R;US)
Stratigraphy, temperature profiles, and flow test data from the PLTG-1 and PLTG-2 coreholes, platanares geothermal system, Honduras, 12:45282 (R;US)
TA-2 Water Boiler Reactor (Phase I) decommissioning: Resolving ground water interference during outdoor component removal and soil decontamination, 12:45126 (R;US)
The Los Alamos Critical Experiments Facility Program, 12:45381 (R;US)
T-violating effects in neutron physics and CP-violation in gauge models, 12:46592 (R;US)
Vapor mass ratio measurements in geothermal production wells, 12:45283 (R;US)
Variance and covariance calculations for nuclear materials accounting using "MAVARIC", 12:45162 (R;US)
Vibrational spectroscopy of shock-compressed fluid N_2 and O_2, 12:46737 (R;US)
Water supply at Los Alamos during 1986: Progress report, 12:46234 (R;US)

Louisiana State Univ., Baton Rouge (USA)
A physico-chemical study of some areas of fundamental significance to biophysics: Annual report, 1986-1987, 12:46411 (R;US)

Louisiana State Univ., Baton Rouge (USA). Dept. of Chemistry
Laser optogalvanic and photoacoustic studies of some atoms and small molecules, 12:46418 (R;US)

Louisville Univ., KY (USA)
DTA/DSC studies of phase equilibria in binary mixtures of barium carbonate with alkali carbonates, 12:45262 (R;US)

Lund Univ. (Sweden)
Collectivity in composite fragment emission from relativistic heavy ion collisions, 12:46676 (R;DE)

Lund Univ. (Sweden). Dept. of Zoophysiology
Radioimmunoassay of 1-Deamino-8-D-Arginine Vasopressin and related peptides with special condsideration to their gastrointestinal absorption, 12:46257 (R;SE)

M

Mainz Univ. (Germany, F.R.). Fachbereich Rechts- und Wirtschaftswissenschaften
International petroleum trade taxes - additional financial assistance to the developing countries, 12:45586 (R;DE;In German)

Manchester Univ. (UK). Schuster Lab.
A study of the structure of ^{162}Dy through the (n,γ) and (n,e^-) reactions, 12:46684 (R;US)

Martin-Luther-Universitaet Halle-Wittenberg, Halle (German Democratic Republic)
Proceedings of the European Meeting on Positron Studies of Defects, 12:46743 (R;DD)

Maryland Univ., College Park (USA)
Joint NASA/Goddard-University of Maryland research program in charged particle and high energy photon detector technology. Semiannual progress report, September 1986-March 1987, 12:46369 (R;US)

Maryland Univ., Frostburg (USA). Appalachian Environmental Lab.
Pathogenic regulation of running water macroinvertebrate populations: Progress report, 12:46212 (R;US)

Mason and Hanger-Silas Mason Co., Inc., Amarillo, TX (USA)
Development of a technique for field packaging of damaged nuclear weapons, 12:46157 (R;US)

Massachusetts Inst. of Tech., Cambridge (USA)
Control of catalyst deactivation with ammonia: Quarterly report for period June 1, 1987 to August 31, 1987, 12:44850 (R;US)
Fischer-Tropsch slurry phase process variations: Quarterly report for period April 1, 1987 to June 30, 1987, 12:45187 (R;US)
Processing of laser formed SiC powder. Final report, 12:45770 (R;US)

Massachusetts Inst. of Tech., Cambridge (USA). Dept. of Materials Science and Engineering
Observations of localized grain boundary dislocations in series of [001] and [110] symmetrical tilt boundaries in aluminum, 12:45717 (R;US)
On the search for experimentally observed grain boundary phase transitions, 12:45716 (R;US)

Massachusetts Inst. of Tech., Cambridge (USA). Plasma Fusion Center
Massachusetts Institute of Technology Plasma Fusion Center: 1986-1987 Report to the President, 12:46862 (R;US)

Massachusetts Inst. of Tech., Cambridge (USA). Research Lab. of Electronics
Focused-ion-beam technology and applications, 12:46723 (R;US)

Massachusetts Inst. of Tech., Lexington (USA). Lincoln Lab.
Efficient side-lobe suppression of laser-diode arrays, 12:46001 (R;US)

Massachusetts Univ., Amherst (USA). Environmental Science Program
Remedial technologies for leaking underground storage tanks: Final report, 12:44996 (R;US)

Mathtech, Inc., Princeton, NJ (USA)
Electrotechnologies: Potential for improving manufacturing productivity: Final report, 12:45566 (R;US)
Matsushita Electric Industrial Co. Ltd., Moriguchi (Japan)
Characteristic improvement of amorphous silicon solar cell for indoor use, 12:45244 (R;JP)
Lithium batteries for memory backup, 12:45525 (R;JP)
National technical report (Matsushita Electric Industrial Company), Vol. 32, No. 5, October 1986, 12:45522 (R;JP)
New type high-capacity Ni-Cd battery Pananica (SM30), 12:45529 (R;JP)
New type sealed lead-acid battery F-Act, 12:45528 (R;JP)
Sealed car battery CAREC Act, 12:45527 (R;JP)
Secondary lithium batteries, 12:45530 (R;JP)
Ultra-thin Paper Lithium Battery, 12:45523 (R;JP)
UM-4(NG) type carbon-zinc dry battery with outer metal jacket, 12:45526 (R;JP)
1.5V-class Li/CuO battery, 12:45524 (R;JP)
McDonnell Douglas Astronautics Co., Huntington Beach, CA (USA)
Demonstration of a personal computer based dynamic simulation and control system analysis tool used to evaluate and tune the major control loops of the Sandia Central Receiver, 12:45260 (R;US)
Mechanical Design Services, Santa Cruz, NM (USA)
Applications of a downhole programmable microprocessor for a geothermal borehole inspection tool, 12:45284 (R;US)
Medical Coll. of Virginia, Richmond (USA). Dept. of Physiology and Biophysics
Biological applications and effects of optical masers. Annual report, 16 March 1985-15 March 1986, 12:46324 (R;US)
Melbourne Univ., Parkville (Australia)
On the surging potential of polar ice streams: Antarctic surges: A clear and present danger?, 12:46328 (R;US)
Meridian Corp., Alexandria, VA (USA)
Review of international geothermal activities and assessment of US industry opportunities: Final report, 12:45273 (R;US)
Review of international geothermal activities and assessment of US industry opportunities: Summary report, 12:45274 (R;US)
Metron Corp., Rancho Cucamonga, CA (USA)
Survey of DOE contractors' standards and calibration practices, 12:46711 (R;US)
Miami Univ., Coral Gables, FL (USA)

Health-hazard evaluation report HETA 84-449-1778, Agrico Chemical Company, Pierce, Florida, 12:46175 (R;US)
Health-hazard evaluation report HETA 86-132-1780, Alyeska Pipeline Service Company, Valdez, Alaska, 12:45006 (R;US)
Health-hazard evaluation report HETA 83-194-1779, Dade County Fire Department, Miami, Florida, 12:45542 (R;US)
Health-hazard evaluation report HETA 86-226-1769, Montgomery Hospital, Norristown, Pennsylvania, 12:46176 (R;US)
Health-hazard evaluation report HETA 84-186-1777, Sancap Abrasives, Inc., Alliance, Ohio, 12:46172 (R;US)
Industrywide studies report of an in-depth survey at E.I. duPont Denemours and Company, Sabine River Works, Orange, Texas, August 25-28, 1986, 12:46173 (R;US)
Industry-wide studies report of an in-depth survey at Denka Chemical Corporation, Houston, Texas, July 14-17, 1986, 12:46174 (R;US)
National Inst. for Telecommunications Research, Johannesburg (South Africa)
Travelling ionospheric disturbances and their effects on radio propagation, 12:46402 (R;ZA)
National Lab. for High Energy Physics, Oho, Ibaraki (Japan)
Proceeding of the 11th meeting on linear accelerators, 12:46057 (R;JP;In Japanese)
National Mechanical Engineering Research Inst., Pretoria (South Africa). Heat Mechanics Div.
Effect of an emergency light diesel fuel on the performance and durability of an ADE (Atlantis Diesel Engine) 236 diesel engine operating with retarded-injection timing. Research report, 12:45700 (R;ZA)
National Ocean Service, Anchorage, AK (USA). Ocean Assessments Div.
Circulation and water masses in the Gulf of Alaska. Final report, 12:46341 (R;US)
Distribution of larval and juvenile red king crabs (Paralithodes camtschatica) in Bristol Bay. Final report, 12:45002 (R;US)
Erosion, deposition, faulting, and instability of shelf sediments: eastern Gulf of Alaska. Section 3. The taxonomy, ecology, and zoogeography of the Holocene and Pleistocene ostracode fauna of the Gulf of Alaska. Final report, 12:45001 (R;US)
Lower Cook inlet meroplankton. Final report, 12:44999 (R;US)
Measurement and location of earthquakes in western Alaska, the Gulf of Alaska, and the Bering Sea. Final report, 12:46333 (R;US)
Oil spill vulnerability, coastal morphology, and sedimentation of outer Kenai Peninsula and Montague Island. Final report, 12:45005 (R;US)
Outer Continental Shelf environmental assessment program. Final reports of principal investigators. Volume 46, 12:44997 (R;US)
Outer Continental Shelf environmental assessment program. Final reports of principal investigators. Volume 47, 12:45000 (R;US)
Outer Continental shelf environmental assessment program. Final reports of principal investigators. Volume 51, 12:45003 (R;US)
Production and dispersion of dissolved methane in southeastern Bering Sea. Final report, 12:45004 (R;US)
Source, composition, and flux of organic detritus in lower Cook Inlet. Final report, 12:44998 (R;US)
National Wetlands Research Center, Slidell, LA (USA)
The St. Marys River, Michigan: An ecological profile, 12:46235 (R;US)
Naval Medical Research Inst., Bethesda, MD (USA)
Incorporation of haemoglobin haem into the rat hepatic haemoproteins tryptophan pyrrolase and cytochrome P-450, 12:46266 (R;US)
Naval Postgraduate School, Monterey, CA (USA)
Application of the Modular Command and Control Evaluation Structure to a Strategic Defense Initiative command and control system. Master's thesis, 12:45711 (R;US)
Parallel structure for on-line identification and adaptive control. Master's thesis, 12:46953 (R;US)
Naval Research Lab., Washington, DC (USA)
Microsensor monitoring of engine lubricants for fuel dilution and water content. Memorandum report, April 1984-October 1986, 12:45691 (R;US)
X-ray photoelectric detectors with conical cathodes: Sensitivity to beam divergence, 12:46117 (R;US)
Naval Surface Weapons Center, Silver Spring, MD (USA)
A model for electron currents near a field null, 12:46845 (R;US)
Nebraska Univ., Lincoln (USA). Behlen Lab. of Physics
"Hot spots": Subnanometer femtosecond energy localization, 12:46780 (R;US)
Nebraska Univ., Lincoln (USA). Dept. of Biochemistry
Biochemical and physiological characterization of higher plants with reduced photorespiration: Final report for period May 25, 1981-May 24, 1985, 12:45231 (R;US)
NEI International Combustion Ltd. (UK)
Firing of coal-water mixture fuels and dense phase pulverized coal, 12:44957 (R;XE)
Nevada Univ., Las Vegas (USA). Water Resources Center
Processes affecting subsurface transport of leaking underground-storage-tank fluids, 12:46225 (R;US)
New Hampshire Governor's Energy Office, Concord (USA)
Distillate fuel oil survey: Final report, 1986-1987, 12:44989 (R;US)
New Jersey Dept. of Transportation, Trenton (USA). Div. of Research and Demonstration
High-occupancy vehicle treatments, impacts, and parameters (a synthesis). Volume 2. Bibliography and data. Final report, 12:45669 (R;US)
New Mexico State Univ., Las Cruces (USA). Dept. of Mechanical Engineering
ESTIM: A parameter estimation computer program: Final report, 12:46988 (R;US)
New Mexico Univ., Albuquerque (USA)
Analysis of boron carbides' electronic structure. Final technical report, 18 July 1984-17 August 1986, 12:45771 (R;US)
Effects of barrel joints on hypervelocity projectiles, 12:45986 (R;US)
On adaptive signal processing of rf signals, 12:46035 (R;US)
New Mexico Univ., Albuquerque (USA). Dept. of Mechanical Engineering
Exact solutions to the governing dynamic equations of plasma armature electromagnetic railguns, 12:45984 (R;US)
New Mexico Univ., Albuquerque (USA). Inst. for Accelerator and Plasma Beam Technology
Pulsed-power equipment for university accelerator-technology program. Final report, 12:46074 (R;US)
New Mexico Univ., Albuquerque (USA). Powders and Granular Materials Lab.
Diffusion of gases in coals and chars: Quarterly technical progress report No. 7, March 15, 1987-June 14, 1987, 12:44871 (R;US)
New York State Dept. of Environmental Conservation, Albany (USA)
Application of the urban airshed model to the New York metropolitan area, 12:46169 (R;US)
New York Univ., NY (USA). Courant Inst. of Mathematical Sciences
[Plasma properties: Annual report], 12:46849 (R;US)
Niagara Mohawk Power Corp., Scriba, NY (USA)
Variation in thyroid calibration efficiencies as a function of phantom design for I-125, 12:46710 (R;US)
Nijverheidsorganisatie TNO, Delft (Netherlands). Hoofdgroep Maatschappelijke Technologie
Morton arboretum bioassays: earthworm bioassay procedures to evaluate the extent of aerially dispersed lead and cadmium in an urban arboretum, 12:46160 (R;NL)

Test of the radar fracture mapping tool in a lake using a known target, 12:45286 (R;US)
The Albuquerque winter visibility study: Volume 2, Data appendices, 12:46179 (R;US)
The applicability of equilibrium calculations to dichlorosilane CVD [chemical vapor deposition], 12:45816 (R;US)
The fundamentals of photovoltaic system electrical design, 12:45254 (R;US)
The Hermes-III Program, 12:46062 (R;US)
Thin-foil x-ray dosimeters with millisecond response time dose and heat-flow calculations, 12:46118 (R;US)
Trajectory vs. PIC methods in diode design, 12:46088 (R;US)
Vapor and liquid phase hydrotreatment of hydropyrolysis tar with hydrous titanium oxide catalysts, 12:44862 (R;US)
Variations in semiconductor device response in a medium-energy x-ray dose-enhancing environment, 12:46123 (R;US)
Visible emission from granular explosives during shock initiation, 12:46151 (R;US)
Voltammetric investigation of porous silicon for integrated circuit applications, 12:46033 (R;US)
X-ray photoelectric detectors with conical cathodes: Sensitivity to beam divergence, 12:46117 (R;US)

Sandia National Labs., Albuquerque, NM (USA). Ground Motion and Seismic Div.
Damage distant airblast from MINOR SCALE, 12:46145 (R;US)

Sandia National Labs., Livermore, CA (USA)
Assessment of central receiver solar thermal enhanced oil recovery systems, 12:45261 (R;US)
Instrumentation system for testing gas transfer systems, 12:46131 (R;US)
Plasma-wall interaction data needs critical to a Burning Core Experiment (BCX), 12:46898 (R;US)
Plasma-wall interaction data needs critical to a Burning Core Experiment (BCX), 12:46899 (R;US)
Solar thermal technology: Annual report, Fiscal Year 1986, 12:45257 (R;US)
Tactical Vulnerability Assessment Training Program, 12:45168 (R;US)

Savannah River Lab., Aiken, SC (USA)
Correlation between aircraft MSS and LIDAR remotely sensed data on a forested wetland in South Carolina, 12:46233 (R;US)
Greater Confinement Disposal trench and borehole operations status, 12:45121 (R;US)
Leaching of saltstone: Laboratory and field testing and mathematical modeling, 12:45119 (R;US)
Performance assessment methods for mixed waste sites at the Savannah River Plant, 12:45120 (R;US)
Reclamation of plutonium from pyrochemical processing residues, 12:45081 (R;US)
Shielded cell and radiobench procedures for analyzing radioactive defense waste, 12:45118 (R;US)

School of Aerospace Medicine, Brooks AFB, TX (USA)
Chemical defense collective protection technology. Volume 2. Effects of airlock airflow pattern, clothing, and exposure concentration on vapor transport. Technical paper, 11-14 February 1985, 12:45967 (R;US)

Schwartz Electro-Optics, Inc., Concord, MA (USA)
Coherent summation of Nd:YAG lasers. Final report, 1 October 1986-31 March 1987, 12:45999 (R;US)

Science Applications International Corp., Arlington, VA (USA). Center for Seismic Studies
Capabilities of seismic networks and their design. Technical report for the period 1 January-31 March 1987, 12:46158 (R;US)
Science Applications International Corp., Boulder, CO (USA). Plasma Research Inst.
Ponderomotive stabilization of external kink modes in tokamaks, 12:46863 (R;US)
Two and three dimensional tokamak equilibrium modifications driven by localized ICRF [ion cyclotron range of frequencies] ponderomotive force, 12:46864 (R;US)
Science Applications International Corp., Chatsworth, CA (USA)
Injection of densely loaded flows into entrained-flow gasifiers: Sixth quarterly report, January 1, 1987-March 31, 1987, 12:44841 (R;US)
Injection of densely loaded flows into entrained-flow gasifiers: Seventh quarterly report, April 1, 1987-June 30, 1987, 12:44842 (R;US)
Science Applications International Corp., McLean, VA (USA)
Analysis of radiation exposure for personnel on the residence islands of Enewetak Atoll after Operation Greenhouse, 1951-1952. Technical report, 3 December 85-20 April 1987, 12:46155 (R;US)
Science Applications International Corp., Newport, RI (USA)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise, 12:44968 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise. Volume 3. Appendix. Final report, September 1983-May 1987, 12:44971 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise. Volume 1. Executive summary. Final report, September 1983-May 1987, 12:44969 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise. Volume 2. Technical presentation. Final report, September 1983-May 1987, 12:44970 (R;US)
Science Research Corp., Somerville, MA (USA)
Studies on temporal field emission from stainless steel surfaces: Final report, April 30, 1987 to June 30, 1987, 12:46091 (R;US)
Science Research Lab., Inc., Somerville, MA (USA)
New discharge pumping method for CO_2 lasers. Technical report (Final), 26 September 1986-30 May 1987, 12:46000 (R;US)
S-Cubed, San Diego, CA (USA)
Analytic and observational approaches to spacecraft auroral charging. Technical report, 12:46399 (R;US)
Shetlands Islands Council, Lerwick (UK)
Impact of offshore oil and gas related activity on the economic development of the Shetland Islands. Summary report prepared by GB Petroleum Consultants Ltd. , 12:45584 (R;GB)
SINTEF, Trondheim (Norway)
Toxicity testing of drilling fluid: further studies of quartz-containing viscosifier on rat lung, 12:46318 (R;NO)
Skidaway Inst. of Oceanography, Savannah, GA (USA)
Nutrient recycling on the southeastern US Continental Shelf: Progress report, 12:46213 (R;US)
Skoda, Plzen (Czechoslovakia). Zavodni Pobocka Ceske Vedeckotechnicke Spolecnosti
Software for diagnostic systems of nuclear power plants, 12:45398 (R;CS;In Czech and Slovak)
Smithsonian Astrophysical Observatory, Cambridge, MA (USA)
Physics of the inner heliosphere: Mechanisms, models and observational signatures. Semiannual progress reports, 1 May 1986-30 April 1987, 12:46370 (R;US)
Solar Energy Research Inst., Golden, CO (USA)
DTA/DSC studies of phase equilibria in binary mixtures of barium carbonate with alkali carbonates, 12:45262 (R;US)
Economic feasibility study of an enzyme-based ethanol plant: A subcontract report, 12:45209 (R;US)
Gallium arsenide and multibandgap solar cell research: Final subcontract report, April 1984-April 1986, 12:45247 (R;US)
Preparation and properties of evaporated CdTe films: Final subcontract report, 16 February 1985-31 March 1987, 12:45248 (R;US)
Solar thermal technology: Annual report, Fiscal Year 1986, 12:45257 (R;US)
Stability of amorphous silicon alloy materials and devices, 12:46038 (B;US)
The preparation of thin films for photovoltaic conversion by novel MOCVD techniques: Final subcontract report, March 1987, 12:45820 (R;US)
Southampton Univ. (UK). Dept. of Ship Science
Need for windship research in Europe, 12:45306 (R;GB)
South Carolina Univ., Columbia (USA). Dept. of Geography
Correlation between aircraft MSS and LIDAR remotely sensed data on a forested wetland in South Carolina, 12:46233 (R;US)
Southern Illinois Univ., Carbondale (USA). Dept. of Mechanical Engineering and Energy Processes
Intermediates formed during supercritical desulfurization of coal: Sixteenth quarterly technical progress report, April 1, 1987 to June 30, 1987, 12:44847 (R;US)
Southern Research Inst., Birmingham, AL (USA)
Laboratory analysis of back-corona discharge, 12:46170 (R;US)
PIC (products of incomplete combustion) analysis methods. Final report, March 1984-April 1985, 12:45684 (R;US)
Southern States Energy Board, Atlanta, GA (USA)
Summary of coal export project, 12:44962 (R;US)
Southern Univ., Baton Rouge, LA (USA). Dept. of Mechanical Engineering
Experimental validation of a zero-dimensional computer model for spark-ignition engines: Progress report, 12:45694 (R;US)
South West Energy Group, Exeter (UK)
Performance of the solar heating system at St. Saviours Hospital, Jersey, 12:45267 (R;GB)
Southwest Research Inst., San Antonio, TX (USA)
Blast testing of expedient shelters in model scale, 12:46146 (R;US)
Southwest Research Inst., San Antonio, TX (USA). Belvoir Fuels and Lubricants Research Facility
Development of new procedures for rating the ignition quality of fuels for diesel engines. Interim report, October 1984-October 1986, 12:44984 (R;US)
Spire Corp., Bedford, MA (USA)
Gallium arsenide and multibandgap solar cell research: Final subcontract report, April 1984-April 1986, 12:45247 (R;US)
Wide bandgap passivation layers on silicon, 12:45228 (R;US)
SRI International, Menlo Park, CA (USA)
Basic research on natural gas combustion phenomena--catalytic combustion. Annual report 1986. Report for 15 January 1986-14 January 1987, 12:45015 (R;US)
Catalytic methods for improved coal liquefaction and hydrotreating: Quarterly report No. 7 for the period March 23, 1987 through June 22, 1987, 12:44851 (R;US)
Probes for corrosion-related variables in LWR coolant: Interim report, 12:45340 (R;US)
Stanford Linear Accelerator Center, Menlo Park, CA (USA)
A conceptual design of Final Focus Systems for linear colliders, 12:46089 (R;US)
An introduction to charm and heavy quark physics, 12:46612 (R;US)
Application of online modeling to the operation of SLC, 12:46069 (R;US)
Conventional power sources for colliders, 12:46090 (R;US)
$CuInSe_2$ solar cell research by sputter deposition: Annual subcontract report, 1 January 1986-31 December 1986, 12:45246 (R;US)
Detecting beauty baryons and heavy beauty mesons with the J/PSI trigger, 12:46513 (R;US)
Experimental review of light quark spectroscopy from e^+e^- production and $\gamma\gamma$ collisions, 12:46514 (R;US)
High gradient superconducting quadrupoles, 12:46071 (R;US)
Linear collider approach to a B anti B factory, 12:46064 (R;US)
Luminosity and tune shift in e^+e^- storage rings, 12:46099 (R;US)
Search for charged Higgs bosons at SSC [Superconducting Super Collider], 12:46565 (R;US)
Search for close-mass lepton pairs (L^-,L^0), 12:46512 (R;US)
The Mark II vertex detectors: Status and prospects, 12:46119 (R;US)
The nature of beamstrahlung, 12:46070 (R;US)
Stanford Univ., CA (USA)
Preparation and properties of evaporated CdTe films: Final subcontract report, 16 February 1985-31 March 1987, 12:45248 (R;US)
Stanford Univ., CA (USA). Dept. of Civil Engineering
Radon as an in situ tracer in geothermal reservoirs: Final report, 12:45278 (R;US)
Stanford Univ., CA (USA). Dept. of Geophysics
Acoustic and dielectric properties and network models of tight-gas sandstones. Annual report, July 1985-June 1986, 12:45010 (R;US)

Stanford Univ., CA (USA). Dept. of Pathology
[Studies on the repair of damaged DNA in bacteriophage, bacterial and mammalian systems]: Final report, 12:46279 (R;US)
Stanford Univ., CA (USA). Systems Optimization Lab.
Computational behavior of Gauss-Newton methods, 12:46991 (R;US)
The Box Method for linear programming: Part 2, Treatment of problems in standard form with explicitly bounded variables, 12:46990 (R;US)
Using MINOS [Modular In-core Nonlinear Optimization System] as a subroutine for decomposition, 12:46989 (R;US)
Statens Byggeforskningsinstitut, Hoersholm (Denmark)
Electricity consumption in schools, 12:45662 (R;DK;In Danish)
SBI low energy house model 86. Design details and energy consumption, 12:45661 (R;DK;In Danish)
State Univ. of New York, Stony Brook (USA)
Investigation of lunar crustal structure and isostasy. Final technical report, 12:46377 (R;US)
Stearns Catalytic Corp., Denver, CO (USA)
Fluidized-bed combustion development: Volume 3, Evaluation of FBC technology improvement options: Final report, 12:44951 (R;US)
Fluidized-bed combustion development: Volume 2, FBC technology improvement options: Final report, 12:44950 (R;US)
Fluidized-bed combustion development: Volume 1, Industrial steam generation: Final report, 12:44949 (R;US)
Fluidized-bed combustion development: Volume 4, Research plan for FBC technology improvements: Final report, 12:44952 (R;US)
Steinkohlenbergbauverein, Essen (Germany, F.R.)
Chemical and physical valorization of coal, 12:44857 (R;XE;In German)
Development and testing of optimum comminution processes and equipment for the preparation of coal in a form adapted to new technologies, 12:44817 (R;XE;In German)
Maintenance of efficient main shaft winding at great depths, 12:44946 (R;XE;In German)
Stiebel Eltron G.m.b.H. und Co. KG, Holzminden (Germany, F.R.)
Development of a low-temperature latent heat storage equipment. Final report, 12:45516 (R;DE;In German)
Stone and Webster Engineering Corp., Boston, MA (USA)
Economic feasibility study of an enzyme-based ethanol plant: A subcontract report, 12:45209 (R;US)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

A

A CODES
Direct detection of optical radiation through a sampling orifice for inductively coupled plasma atomic emission spectroscopy, 12:46423 (R;US)

AAF
See ACETYLAMINOFLUORENES

ABSOLUTE INSTABILITIES
Mapping
Cusp map in the complex-frequency plane for absolute instabilities, 12:46483 (J;US)

ABSORBED DOSES
See RADIATION DOSES

ACCELERATOR FACILITIES
See also STANFORD LINEAR COLLIDER
Design
Design considerations for a combined synchrotron light source and heavy-ion storage ring atomic physics facility, 12:46100 (J;NL)
HVEM-tandem accelerator facility at Argonne National Laboratory, 12:46097 (J;NL)
Operation
HVEM-tandem accelerator facility at Argonne National Laboratory, 12:46097 (J;NL)
Uses
HVEM-tandem accelerator facility at Argonne National Laboratory, 12:46094 (J;NL)

ACCELERATORS
See also LINEAR ACCELERATORS
MESON FACTORIES
PARTICLE BEAM FUSION ACCELERATOR
RAILGUN ACCELERATORS
Beam Cooling
Cooled ion beams for physics experiments, 12:46073 (J;NL)
Cavity Resonators
Hermes-III prototype cavity tests, 12:46085 (R;US)
Computer-Aided Design
Interactive Design of Accelerators (IDA), 12:46077 (R;US)
Computerized Control Systems
The impact of new computer technology on accelerator control, 12:46060 (R;US)
Diode Tubes
Proto II triaxial electron beam diode research, 12:46086 (R;US)
High-Voltage Pulse Generators
Hermes-III prototype cavity tests, 12:46085 (R;US)
Reviews
Accelerator technology, 12:46065 (BA;US)
Superconducting Cavity Resonators
Superconducting radio frequency technology: Expanding the horizons of physics and technology, 12:46081 (R;US)
Superconducting Magnets
Superconducting accelerator technology, 12:46056 (R;US)
Technology Assessment
Accelerator technology, 12:46065 (BA;US)

ACCIDENTAL INTAKE
See ACCIDENTS

ACCIDENTAL IRRADIATION
See RADIATION ACCIDENTS

ACCIDENTS
See also RADIATION ACCIDENTS
REACTOR ACCIDENTS
Statistics
Injury experience in metallic mineral mining, 1985, 12:44967 (R;US)

ACCOUNTING
M Codes
Variance and covariance calculations for nuclear materials accounting using "MAVARIC", 12:45162 (R;US)

ACES
See QUARKS

ACETALDEHYDE
Biochemical Reaction Kinetics
Stable reaction products of 3-methyl cytidine with chloroacetaldehyde and acetaldehyde, 12:46246 (J;US)
Chemical Reaction Yield
Spectroscopy of the HCO radical and its relation to the photodissociation of aliphatic aldehydes, 12:45938 (BA;US)
Electron-Molecule Collisions
Electron-impact spectroscopy of acetaldehyde, 12:46440 (J;US)
Photochemical Reactions
Spectroscopy of the HCO radical and its relation to the photodissociation of aliphatic aldehydes, 12:45938 (BA;US)

ACETATES
Adsorption
Room-temperature luminescence properties of rho-aminobenzoic acid adsorbed on sodium acetate-sodium chloride mixtures, 12:45947 (J;US)

ACETIC ALDEHYDE
See ACETALDEHYDE

ACETYLACETONE
Supercritical Fluid Chromatography
Separation of metal-containing compounds by supercritical fluid chromatography, 12:45863 (J;US)
ACETYLAMINOFLUORENES
DNA Adducts
The impact of energy-related pollutants on chromosome structure: Final report, January 1, 1984-December 31, 1986, 12:46306 (R;US)
ACID ELECTROLYTE FUEL CELLS
Steam Reformer Processes
Demonstration of a high-efficiency steam reformer for fuel cell power plant applications, 12:45596 (R;US)
ACID RAIN
Deposition
Modeling the relationship between sources and receptors of wet deposition of S and NO/sub x/-N in the intermountain west of the United States, 12:46162 (R;US)
Economic Impact
Coal markets and utilities' compliance decisions: Final report (Site specific response and its cost), 12:44963 (R;US)
Environmental Effects
Air pollutants effects on forest ecosystems, 12:46201 (B;US)
Legislation
Coal markets and utilities' compliance decisions: Final report (Site specific response and its cost), 12:44963 (R;US)
Long-Range Transport
Modeling the relationship between sources and receptors of wet deposition of S and NO/sub x/-N in the intermountain west of the United States, 12:46162 (R;US)
Meetings
Air pollutants effects on forest ecosystems, 12:46201 (B;US)
Monitoring
Spatial characterization of acid rain stress in Canadian Shield lakes. Progress report, 1 August 1985-1 February 1986, 12:46217 (R;US)
ACOUSTIC EMISSION TESTING
Data Acquisition Systems
An acoustic emission digital data acquisition workstation, 12:46022 (R;US)
ACQUISITION (DATA)
See DATA ACQUISITION
ACRIDINES
Metabolism
Pulmonary metabolism of dibenz(a,j)acridine: A carcinogenic heterocyclic aromatic: Informal technical progress report for period October 1, 1983-December 31, 1984, 12:46305 (R;US)
ACTIVATED CARBON
Sorptive Properties
Incineration of water pollutants with activated char from coal, wood, or crop residues in a system designed to produce energy and pyrolysis by-product chemicals. Final Technical completion report (Final), 12:46224 (R;US)
ACTIVATED SLUDGE PROCESS
Comparative Evaluations
Fossil energy environmental research including innovative concepts for wastewater, sludge, and product treatment, 12:44822 (R;US)
ACTIVATION ANALYSIS
Nuclear constants of (n, γ)-produced nuclides in activation analysis, 12:45858 (RA;JP;In Japanese)
ADENOCARCINOMAS
See CARCINOMAS
ADMINISTRATIVE PROCEDURES
Control
Controlling laboratory conditions and preventing the problem: The health physicist's viewpoint, 12:45976 (R;US)
ADSORBENTS
See also ACTIVATED CARBON
CHARCOAL
MOLECULAR SIEVES
Economics
Furnace injection of additives for SO_2 reduction, 12:44899 (R;XU)
Technology Assessment
Low-emission combustion processes, 12:44908 (R;XU)
State of the art of the dry limestone-additive method, 12:44922 (R;XU)
Waste Product Utilization
Secondary utilization of furnace limestone injection ash, 12:44917 (R;XU)
ADSORPTION HEAT
Correlations
Acid-base properties of coals and other solids: Final report, September 1, 1985 to August 30, 1987, 12:44872 (R;US)
AEROSOLS
See also RADIOACTIVE AEROSOLS
SMOKES
Air Pollution Monitoring
Characteristics of individual particles at a rural site in the eastern United States, 12:46167 (R;US)
Evaporation
Aerosol clearing model for a high-energy laser beam propagating through vaporizing media, 12:45825 (J;US)
Laser-Radiation Heating
Aerosol clearing model for a high-energy laser beam propagating through vaporizing media, 12:45825 (J;US)
Light Transmission
Aerosol clearing model for a high-energy laser beam propagating through vaporizing media, 12:45825 (J;US)
Removal
Off-gas characterization and cleanup for simulated in situ retorting experiments, 12:45059 (RA;US)
AGRICULTURAL RESIDUES
See AGRICULTURAL WASTES
AGRICULTURAL WASTES
See also MANURES
Anaerobic Digestion
Experimental studies on catch fuel crops. Final report, 12:45233 (R;GB)
Generation of gases from biomass by anaerobic digestion and their practical utilization as fuel, 12:45188 (R;GB)
AGRICULTURE
See also HORTICULTURE
Bibliographies
Review of nuclear techniques in South African agricultural research: 1963-1984, 12:46269 (RA;ZA)
AIR
Quantitative Chemical Analysis
Remote near infrared analyses of combustion gases over optical fibers, 12:45886 (BA;US)
Tandem quadrupole/time-of-flight mass spectrometer for application to environmental analyses, 12:45887 (BA;US)
AIR CONDITIONING
Report on the 1985 annual meeting of the German Association of Refrigeration and Air-Conditioning Engineering (DKV), 12:45602 (R;DE;In German)
Working Conditions
Health problems associated with air conditioning: a study tour of the USA, 12:46326 (R;GB)
AIR FILTERS
Efficiency
Use of re-circulation air and the filtration of air, 12:45663 (R;FI;In Finnish)
AIR FLOW
Prediction Equations
Numerical air flow modelling, 12:45600 (R;GB)
AIR HEATERS
Design
[Method and means for preventing frost damage to crops]: Final technical report, 12:45671 (R;US)
Field Tests
[Method and means for preventing frost damage to crops]: Final technical report, 12:45671 (R;US)
Performance Testing
[Method and means for preventing frost damage to crops]: Final technical report, 12:45671 (R;US)
AIR POLLUTION
See also INDOOR AIR POLLUTION
Acidification
Spatial characterization of acid rain stress in Canadian Shield lakes. Progress report, 1 August 1985-1 February 1986, 12:46217 (R;US)

Bioassay
Morton arboretum bioassays: earthworm bioassay procedures to evaluate the extent of aerially dispersed lead and cadmium in an urban arboretum, 12:46160 (R;NL)
Mathematical Models
Analysis of diffusion field experiments, 12:46171 (R;US)
Application of the urban airshed model to the New York metropolitan area, 12:46169 (R;US)
Transport and photochemical modeling. Studies of atmospheric species, 12:46218 (R;US)
Opacity
Spatial characterization of acid rain stress in Canadian Shield lakes. Progress report, 1 August 1985-1 February 1986, 12:46217 (R;US)
Respiration
Differing response of asthmatics to sulfur dioxide exposure with continuous and intermittent exercise, 12:46311 (R;US)

AIR POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Laboratory analysis of back-corona discharge, 12:46170 (R;US)
Administrative Procedures
Material on dying forests: Effectiveness analysis of emission-reducing measures. Sulphur dioxide, nitrogen oxides, 12:46194 (R;DE;In German)
Multi-Parameter Analysis
Development of pollutant emissions from motor vehicle traffic. Account of the effects of EC directives and tax incentives for low-pollution cars, 12:46195 (R;DE;In German)

AIR POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Economic Analysis
Final rule for radon-222 emissions from licensed uranium mill tailings - economic analysis. Final report, 12:45152 (R;US)
Meetings
1987 symposium on stationary combustion nitrogen oxide control: Volume 1, 12:45322 (R;US)
1987 symposium on stationary combustion nitrogen oxide control: Volume 2, 12:45323 (R;US)
Report of the seminar on the control of sulfur and nitrogen oxides from stationary sources, 12:46164 (R;XU)

AIR POLLUTION MONITORING
Program Management
Pilot project to demonstrate the feasibility of a state continuous-emission-monitoring system (CEMS) regulatory program. Summary report, 12:46197 (R;US)
Regulations
Pilot project to demonstrate the feasibility of a state continuous-emission-monitoring system (CEMS) regulatory program. Summary report, 12:46197 (R;US)

AIR PREHEATERS
See AIR HEATERS

AIR QUALITY
Standards
Application of the urban airshed model to the New York metropolitan area, 12:46169 (R;US)
Example modeling to illustrate SIP (State Implementation Plan) development for the PM(10) NAAQS (National Ambient Air Quality Standards), 12:46196 (R;US)

AIR SAMPLERS
Design
Differential atmospheric tritium sampler, 12:46193 (BA;US)

AIRBORNE PARTICLES
See PARTICULATES

AIRBORNE PARTICULATES
See PARTICULATES

AIRCRAFT
See also HELICOPTERS
Fuel Economy
Energy efficiency: Getting the most from the energy we have, 12:45561 (RA;US)

AIRCRAFT ACCIDENTS
See ACCIDENTS

AIRCRAFT FUELS
See AVIATION FUELS

AIRGLOW
Images
Simultaneous multi-spectral narrow-band auroral imagery from space (1150A to 6300A2), 12:46397 (R;US)

ALAP
See RADIATION PROTECTION

ALARM SYSTEMS
Computer Codes
An object oriented real time knowledge based system, 12:45166 (R;US)
Display Devices
Integrating voice I/O in the specification and operation of alarm processing and display systems, 12:45985 (R;US)
Safety Engineering
Alarm points for fixed oxygen monitors, 12:46930 (R;US)

ALASKA
Coal Deposits
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
Continental Shelf
Alaska statewide and regional economic and demographic systems: effects of OCS (Outer Continental Shelf) exploration and development, 1985. Social and economic studies program technical report Number 115. Final report, 12:44976 (R;US)
Seismicity
Measurement and location of earthquakes in western Alaska, the Gulf of Alaska, and the Bering Sea. Final report, 12:46333 (R;US)

ALASKA OIL PIPELINE
Water Treatment
Health-hazard evaluation report HETA 86-132-1780, Alyeska Pipeline Service Company, Valdez, Alaska, 12:45006 (R;US)

ALCOHOL FUELS
Use for pure alcohols, alcohol-water mixtures, or alcohols with additives; for alcohol-gasoline mixtures, use GASOHOL.
Experiment Planning
Alternative fuels utilization program project office operation plan for FY 1986-87, 12:45709 (R;US)
Information Dissemination
Compendium of significant events in the recent development of alcohol fuels in the United States, 12:45708 (R;US)
Research Programs
Alternative fuels utilization program project office operation plan for FY 1986-87, 12:45709 (R;US)

ALCOHOLS
See also METHANOL
Decomposition
A surface science investigation of potential intermediates, catalysts, and promoters in the synthesis of higher alcohols by metals: Progress report, 12:45208 (R;US)
Synthesis
A surface science investigation of potential intermediates, catalysts, and promoters in the synthesis of higher alcohols by metals: Progress report, 12:45208 (R;US)

ALDEHYDES
See also ACETALDEHYDE
CHLORAL
FORMALDEHYDE
Air Pollution
Volatile organic hydrocarbon and aldehyde composition in Raleigh, North Carolina during the 1985 woodsmoke study, 12:46177 (R;US)
Chemical Reactions
Evaluation of laser desorbed transition-metal ions as analytical chemical ionization reagents by pattern recognition, 12:45870 (J;US)
Indoor Air Pollution
Health-hazard evaluation report HETA 86-226-1769, Montgomery Hospital, Norristown, Pennsylvania (Glutaraldehyde), 12:46176 (R;US)

ALDEHYDO ACIDS
See ALDEHYDES

ALEUTIAN ISLANDS
Continental Shelf
Outer Continental shelf environmental assessment program. Final reports of principal investigators. Volume 51, 12:45003 (R;US)
Production and dispersion of dissolved methane in southeastern Bering Sea. Final report, 12:45004 (R;US)
ALGEBRA
Irreducible Representations
On the relevance of some constructions of highest weight modules over (Super-) Kac-Moody algebras, 12:46588 (R;XA)
ALGERIA
Natural Gas Processing Plants
Design, testing and commissioning of the reinjection centrifugal compressors for the Alrar gas treatment plant, 12:45008 (RA;GB)
ALKALI METAL COMPOUNDS
See also CESIUM COMPOUNDS
POTASSIUM COMPOUNDS
SODIUM COMPOUNDS
Formation Heat
Calorimetric study of alkali borates, 12:45914 (RA;SU;In Russian)
Formation enthalpies of fluoride complexes of systems MF-UO_2F_2 (M-alkali metal), 12:45955 (RA;SU;In Russian)
Phase Studies
Calorimetric study of alkali borates, 12:45914 (RA;SU;In Russian)
ALKALI METALS
See also CESIUM
LITHIUM
POTASSIUM
RUBIDIUM
SODIUM
Evaporation
Vaporization and condensation of alkali species in coal gasification streams, 12:44826 (R;JP;In Japanese)
Vapor Condensation
Vaporization and condensation of alkali species in coal gasification streams, 12:44826 (R;JP;In Japanese)
ALKALINE FLOODING
See CAUSTIC FLOODING
ALKALINE PHOSPHATASE
Code number 3.1.3.1.
Biochemical Reaction Kinetics
Michaelis constants of non-chromogenic substrates may be determined using chromogenic substrates, 12:46244 (J;US)
Enzyme Activity
Michaelis constants of non-chromogenic substrates may be determined using chromogenic substrates, 12:46244 (J;US)
ALKANES

ALUMINIA
See ALUMINIUM OXIDES

ALUMINIUM
Atom Collisions
Extreme-ultraviolet light emission from 50-MeV H^0 impact on aluminum, 12:46788 (J;US)
Crack Propagation
An acoustic emission digital data acquisition workstation, 12:46022 (R;US)
Dislocations
Observations of localized grain boundary dislocations in series of [001] and [110] symmetrical tilt boundaries in aluminum, 12:45717 (R;US)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Ion-Atom Collisions
Ion-induced X-ray studies with a high luminosity von Hamos crystal spectrometer, 12:46122 (J;NL)
Materials Recovery
Recovery of non-ferrous metal from pulverised refuse - a feasibility study, 12:46042 (R;GB)
Phase Transformations
On the search for experimentally observed grain boundary phase transitions, 12:45716 (R;US)
Physical Radiation Effects
Change of microhardness and study of defects in HPIB irradiated Al by PA method, 12:45733 (RA;DD)
Pitting Corrosion
Chloride induced corrosion of stainless steels and aluminium in condensing boilers, 12:45725 (R;DK;In Danish)
Tensile Properties
An acoustic emission digital data acquisition workstation, 12:46022 (R;US)
Ultraviolet Spectra
Extreme-ultraviolet light emission from 50-MeV H^0 impact on aluminum, 12:46788 (J;US)
Vacancies
Migration stage of divacancies in quenched pure aluminium, dilute aluminium alloys, and pure copper studied by positron annihilation, 12:46756 (RA;DD)
Voids
Trapping rates into cavities in Al: temperature and size effects, 12:46764 (RA;DD)

ALUMINIUM ALLOYS
See also ALUMINIUM BASE ALLOYS
Bonding
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Crystal Structure
Solid-solution strengthening: Substitution of V in Ni_3Al and structural stability of $Ni_3(Al,V)$, 12:45743 (J;US)
Electronic Structure
Solid-solution strengthening: Substitution of V in Ni_3Al and structural stability of $Ni_3(Al,V)$, 12:45743 (J;US)
Formation Heat
Formation enthalpy of alkaline earth metals with aluminium intermetallic compounds, 12:45721 (RA;SU;In Russian)
Thermodynamic characteristics of aluminium-scandium and zirconium-silicon binary alloys, 12:45720 (RA;SU;In Russian)
Pairing Interactions
Supercell total energy approach to transition metal alloy pair interactions, 12:46802 (J;US)
Phase Studies
Formation of metastable structures and amorphous phases in Pu-based systems using the triode sputtering technique, 12:45739 (R;US)
Solution Heat
Thermodynamic characteristics of aluminium-scandium and zirconium-silicon binary alloys, 12:45720 (RA;SU;In Russian)
Structural Chemical Analysis
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Wear
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)

ALUMINIUM ARSENIDES
Electronic Structure
Photoluminescence studies of GaAs/AlAs superlattices, 12:46779 (R;US)
Photoluminescence
Photoluminescence studies of GaAs/AlAs superlattices, 12:46779 (R;US)

ALUMINIUM BASE ALLOYS
Decomposition
Positron studies of decomposition phenomena in Al-alloys, 12:46749 (RA;DD)
Impurities
Positron lifetime and Moessbauer spectroscopy study of the vacancy-impurity interaction in dilute Al-Sn alloys, 12:46757 (RA;DD)
Moessbauer Effect
Positron lifetime and Moessbauer spectroscopy study of the vacancy-impurity interaction in dilute Al-Sn alloys, 12:46757 (RA;DD)
Precipitation
Positron annihilation study of clustering of Ag atoms in quenched Al-1 at% Ag alloy, 12:46763 (RA;DD)
Vacancies
Migration stage of divacancies in quenched pure aluminium, dilute aluminium alloys, and pure copper studied by positron annihilation, 12:46756 (RA;DD)
Positron lifetime and Moessbauer spectroscopy study of the vacancy-impurity interaction in dilute Al-Sn alloys, 12:46757 (RA;DD)

ALUMINIUM CHLORIDES
Molecular Structure
Ab initio molecular orbital investigation of the structure of $Al_3F_7^-$ and $Al_2Cl_7^-$, 12:45901 (R;US)

ALUMINIUM COMPLEXES
Sublimation Heat
Thermodynamic properties of aluminium, chromium, yttrium and zirconium acetylacetonates, 12:45916 (RA;SU;In Russian)
Supercritical Fluid Chromatography
Separation of metal-containing compounds by supercritical fluid chromatography, 12:45863 (J;US)

ALUMINIUM OXIDES
Acoustics
Radiation growth study of acoustic loss related defects in alpha-quartz, 12:45847 (J;US)
Crystal Structure
Radiation growth study of acoustic loss related defects in alpha-quartz, 12:45847 (J;US)
Dielectric Properties
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Electric Contacts
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Electronic Structure
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Interfaces
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Radiolysis
Radiation growth study of acoustic loss related defects in alpha-quartz, 12:45847 (J;US)

ALUMINIUM FLUORIDES
Molecular Structure
Ab initio molecular orbital investigation of the structure of $Al_2F_7^-$ and $Al_2Cl_7^-$, 12:45901 (R;US)
ALUMINIUM OXIDES
Absorption Spectroscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Bonding
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Dusts
Health-hazard evaluation report HETA 84-186-1777, Sancap Abrasives, Inc., Alliance, Ohio, 12:46172 (R;US)
Electron Spectroscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Erosion
Erosion of hard material coating systems, 12:45793 (BA;US)
Fracture Mechanics
Wear of an alumina-silicon carbide whisker composite, 12:45794 (BA;US)
Optical Microscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Scanning Electron Microscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Structural Chemical Analysis
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Thermodynamic Properties
Erosion of hard material coating systems, 12:45793 (BA;US)
Wear
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Wear of an alumina-silicon carbide whisker composite, 12:45794 (BA;US)
Wear Resistance
Erosion of hard material coating systems, 12:45793 (BA;US)
X-Ray Diffraction
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
ALUMINUM

ANTIPARTICLES

A matter-antimatter propulsion system for manned interstellar flight, 12:46642 (R;US)

ANTIMONY ALLOYS
Precipitation
Positron annihilation study of precipitation effects in CuIn and CuSb alloys, 12:46762 (RA;DD)
Thermodynamic Properties
Thermodynamic properties of HoBi and HoSb compounds, 12:45722 (RA;SU;In Russian)

ANTIMONY CHLORIDES
Clathrates
Time-resolved x-ray scattering study of ordering kinetics in $SbCl_5$-intercalated graphite, 12:45837 (J;US)

ANTIMUONS
See MUONS PLUS

ANTINEUTRINO-ELECTRON INTERACTIONS
Elastic Scattering
Effect of extra neutral gauge bosons on neutrino-electron scattering, 12:46550 (RA;US)
Elastic scattering of muon neutrinos at B.N.L., 12:46498 (RA;US)

ANTINEUTRINO-PROTON INTERACTIONS
Elastic Scattering
Elastic scattering of muon neutrinos at B.N.L., 12:46498 (RA;US)

ANTINUCLEI
See also ANTIPROTONS
Nuclear Reactions
Possible complementary cosmic-ray systems: nuclei and antinuclei, 12:46371 (R;US)

ANTIPARTICLES
Particle Production
Systematics of the transverse momentum distributions and azimuthal correlations in K/sup +/p inclusive reactions at 32 GeV/c, 12:46507 (R;SU;In Russian)

ANTIPROTON REACTIONS
Annihilation
Observation of antiproton annihilation in heavy nuclei at 100 GeV/c, 12:46660 (R;US)

ANTIPROTON SOURCES
Present activity and future plans at Fermilab, 12:46515 (BA;US)

ANTIPROTONS
Gravitational Interactions
Antiprotons are another matter, 12:46828 (R;US)
Measurement of the gravitational acceleration of the antiproton: An experimental overview, 12:46137 (J;NL)
Trapping
Measurement of the gravitational acceleration of the antiproton: An experimental overview, 12:46137 (J;NL)

ANTIREFLECTION COATINGS
Fabrication
High damage threshold optical coatings, 12:45848 (BA;US)
Porous halide antireflective coatings for adverse environments, 12:45849 (BA;US)
Physical Radiation Effects
Average-power 1064-nm laser-induced damage testing at Lawrence Livermore National Laboratory, 12:46025 (BA;US)
Refractivity
Porous halide antireflective coatings for adverse environments, 12:45849 (BA;US)

APPLICATORS (RADIOTHERAPY)
See RADIATION SOURCES

AQUATIC ECOSYSTEMS
See also WETLANDS
Contamination
Fate and bioaccumulation of soil-associated low-level naturally occurring radioactivity following disposal into a marine ecosystem. Final report, 12:46232 (R;US)

AQUATIC ORGANISMS
Unspecified biota characteristic of aquatic ecosystems.
See also FISHES
PLANKTON
Food Chains
Lower Cook inlet meroplankton. Final report, 12:44999 (R;US)

AQUEOUS SOLUTIONS
Thermodynamic Properties
A thermodynamic model for aqueous solutions of liquid-like density, 12:46338 (R;US)

AQUIFERS
Contamination
Characterization of waters from retort 1 at least tract C-a, 12:45070 (RA;US)
Profiling of organic solutes in oil shale by-product waters, 12:45061 (RA;US)
Geology
Baseline evaluation of the hydrogeology and ground water quality of the proposed RM1 UCG site, Hanna, Wyoming, 12:44925 (RA;US)
Hydrology
Baseline evaluation of the hydrogeology and ground water quality of the proposed RM1 UCG site, Hanna, Wyoming, 12:44925 (RA;US)
Hydrological testing at the Tono II UCG site, 12:44924 (RA;US)
Permeability
Hydrological testing at the Tono II UCG site, 12:44924 (RA;US)
Water Pollution
Detection of a microbial consortium, including type 2 methanotrophs, by use of phospholipid fatty acids in an aerobic halogenated hydrocarbon-degrading soil column enriched with natural gas, 12:46226 (R;US)
Hydrological testing at the Tono II UCG site, 12:44924 (RA;US)

ARCHITECTURE
Skylights
Interim procedure to measure the thermal performance of window systems, 12:45660 (R;US)
Windows
Interim procedure to measure the thermal performance of window systems, 12:45660 (R;US)

ARCTIC OCEAN
General Circulation Models
Numerical study of sea ice and ocean circulation in the Arctic, 12:46342 (J;US)
Ice
Numerical study of sea ice and ocean circulation in the Arctic, 12:46342 (J;US)

ARGON
Electron-Atom Collisions
Electron degradation and yields of initial products. I. Excited species generated by electrons in binary mixtures, 12:46437 (J;US)
Emission Spectroscopy
Direct detection of optical radiation through a sampling orifice for inductively coupled plasma atomic emission spectroscopy, 12:46423 (R;US)

ARGON 40 REACTIONS
Heavy Ion Fusion Reactions
Crystal blocking in heavy ion reactions, 12:46666 (J;NL)

POLYCYCLIC AROMATIC HYDROCARBONS
Chemical Activation
Transition metal activation and functionalization of C-H [carbon-hydrogen] bonds: Progress report for period June 1, 1986-November 30, 1987, 12:45905 (R;US)
Chemical Radiation Effects
Transition metal activation and functionalization of C-H [carbon-hydrogen] bonds: Progress report for period June 1, 1986-November 30, 1987, 12:45905 (R;US)

Chemical Reactions
Catalytic activation and functionalization of C-H bonds. Aldimine formation by the insertion of isonitriles into aromatic C-H bonds, 12:45934 (J;US)
Complexes
An investigation of the photochemical properties of transition metal arene complexes: Final report for the period July 1, 1983 to June 30, 1987, 12:45943 (R;US)
Ionization Potential
Photoionization spectroscopy of highly polar aromatics, 12:46416 (RA;US)
Mass Spectroscopy
Low-voltage, high-resolution mass spectrometric methods for fuel analysis: application to coal distillates, 12:44880 (J;US)
Photoionization
Photoionization spectroscopy of highly polar aromatics, 12:46416 (RA;US)
Photolysis
Laser flash—chemiluminescence study of $O_2(^1\Delta)$ photoeliminated from 1,4-dimethylnaphthalene endoperoxide, 12:45945 (J;US)

ARRAY PROCESSORS
Computer Architecture
Benchmarking the Connection Machine, 12:46966 (R;US)
Transformation of broadcasting into pipelining. Research report, 12:46952 (R;US)
Memory Devices
Implementation of preconditioned s-step Conjugate Gradient methods on a multiprocessor system with memory hierarchy, 12:46967 (R;US)
Performance Testing
Benchmarking the Connection Machine, 12:46966 (R;US)

ARSENIC
Emission Spectroscopy
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Environmental Transport
Kinetics and mechanisms of the release of trace inorganic contaminants to ground water from coal ash basins on the Savannah River Plant: Progress report, September 29, 1986-September 30, 1987, 12:46199 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)

ASHES
See also FLY ASH
Chemical Composition
Kinetics and mechanisms of the release of trace inorganic contaminants to ground water from coal ash basins on the Savannah River Plant: Progress report, September 29, 1986-September 30, 1987, 12:46199 (R;US)
Leaching
Results of leaching experiments conducted on samples from the Tono I UCG cavity, 12:44838 (R;US)
Sorptive Properties
Incineration of water pollutants with activated char from coal, wood, or crop residues in a system designed to produce energy and pyrolysis by-product chemicals. Final Technical completion report (Final), 12:46224 (R;US)
Waste Management
Water management in ash-handling systems: Final report, 12:45324 (R;US)
Waste Product Utilization
Making coal ash fertilizer combined with phosphoric acid solutions (Part 1), 12:44883 (R;JP;In Japanese)

ASPHALT RIDGE DEPOSIT
Resource Potential
Chemical and physical properties of oils produced from tar sand, 12:45053 (RA;US)

ASPHALTS
Combustion Properties
An evaluation of the potential end uses of a Utah tar sand bitumen, 12:45040 (R;US)
Ductility
An evaluation of the potential end uses of a Utah tar sand bitumen, 12:45040 (R;US)
Infrared Spectra
An evaluation of the potential end uses of a Utah tar sand bitumen, 12:45040 (R;US)
Viscosity
An evaluation of the potential end uses of a Utah tar sand bitumen, 12:45040 (R;US)

ASTATINE 211
Chemical Preparation
Process for producing astatine-211 for radiopharmaceutical use, 12:45958 (P;US)

ASTHMA
Differing response of asthmatics to sulfur dioxide exposure with continuous and intermittent exercise, 12:46311 (R;US)

ASTRONOMY
Research Programs
Observatory report, 12:46395 (J;US)

ASTROPHYSICS
Magnetic Monopoles
Monopoles, cosmology, and astrophysics - Update 1985, 12:46391 (J;US)
Research Programs
Institute of Geophysics and Planetary Physics at Lawrence Livermore National Laboratory: 1986 annual report, 12:46334 (R;US)
Joint NASA/Goddard-University of Maryland research program in charged particle and high energy photon detector technology. Semiannual progress report, September 1986-March 1987, 12:46369 (R;US)

Chemical Preparation
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Crystal Growth
Growth and dielectric properties of lead barium niobate single crystals and morphotropic phase boundary, 12:45796 (BA;US)
Dielectric Properties
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Growth and dielectric properties of lead barium niobate single crystals and morphotropic phase boundary, 12:45796 (BA;US)
Piezoelectricity
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
BARIUM IONS
Electron-Ion Collisions
Measurements of electron excitation and recombination for Ne-like Ba^{46+}, 12:46433 (R;US)
Excitation
Measurements of electron excitation and recombination for Ne-like Ba^{46+}, 12:46433 (R;US)
Recombination
Measurements of electron excitation and recombination for Ne-like Ba^{46+}, 12:46433 (R;US)
BARIUM ISOTOPES
Isotope Effects
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
BARIUM OXIDES
Coatings
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa_2Cu_3O/sub 6.9/, 12:45773 (J;US)
Critical Current
Superconducting properties of aligned crystalline grains of $Y_1Ba_2Cu_3O$/sub 7-//sub δ/, 12:45785 (J;US)
Critical Field
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Crystal-Phase Transformations
Oxygen ordering and the orthorhombic-to-tetragonal phase transition in YBa_2Cu_3O/sub 7-//sub x/, 12:45776 (J;US)
Current Density
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Dielectric Properties
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Electric Conductivity
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Electron-Electron Coupling
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Electronic Structure
Unoccupied electronic states and surface phenomena for YBa_2Cu_3O/sub 6.9/, 12:45777 (J;US)
Grain Orientation
Superconducting properties of aligned crystalline grains of $Y_1Ba_2Cu_3O$/sub 7-//sub δ/, 12:45785 (J;US)
Hall Effect
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Interfaces
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa_2Cu_3O/sub 6.9/, 12:45773 (J;US)
Isotope Effects
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)

Observation of an oxygen isotope effect in $YBa_2Cu_3O_7$, 12:45775 (J;US)
Magnetic Susceptibility
Normal-state properties of ABa2Cu3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Magnetization
Large anisotropic critical magnetization currents in single-crystal YBa2Cu3O/sub 7-//sub δ/, 12:45784 (J;US)
Microstructure
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Microstructure and properties of YBa2Cu3O/sub 9-//sub δ/ superconductors with transitions at 90 and near 290 K, 12:45774 (J;US)
Mixing
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa2Cu3O/sub 6.9/, 12:45773 (J;US)
Order-Disorder Transformations
Oxygen ordering and the orthorhombic-to-tetragonal phase transition in YBa2Cu3O/sub 7-//sub x/, 12:45776 (J;US)
Piezoelectricity
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Pyroelectric Effect
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Structural Chemical Analysis
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Superconductivity
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
Electrical properties of high T/sub c/ superconductors under high pressures (LaBaCuO, LaSrCuO, YBaCuO), 12:45813 (R;US)
Microstructure and properties of YBa2Cu3O/sub 9-//sub δ/ superconductors with transitions at 90 and near 290 K, 12:45774 (J;US)
Observation of an oxygen isotope effect in $YBa_2Cu_3O_7$, 12:45775 (J;US)
Superconducting properties of aligned crystalline grains of Y1Ba2Cu3O/sub 7-//sub δ/, 12:45785 (J;US)
Thermoelectric Properties
Normal-state properties of ABa2Cu3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Transition Temperature
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)

BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES

BATTERIES (ISOTOPIC)
See RADIOISOTOPE BATTERIES

BEAM BENDING MAGNETS
Racetrack Microtrons
Calculation of precise beam bending magnet for racetrack microtron, 12:46083 (R;SU;In Russian)

BEAM EMITTANCE
Damping
Linear emittance damper with megagauss fields, 12:46093 (R;US)

BEAM INJECTION
See also NEUTRAL ATOM BEAM INJECTION
Mathematical Models
Streamlined Darwin methods for particle beam injectors, 12:46434 (R;US)

BEAM OPTICS
Computer-Aided Design
Application of online modeling to the operation of SLC, 12:46069 (R;US)

BEAM PERVEANCE
See BEAM EMITTANCE
SPACE CHARGE

BEAM-BEAM INTERACTIONS
Bremsstrahlung
The nature of beamstrahlung, 12:46070 (R;US)
Computerized Simulation
Particle in cell simulations of disruption, 12:46072 (R;US)
Synchrotron Radiation
The nature of beamstrahlung, 12:46070 (R;US)

BEARINGS
Lubrication
Boundary lubrication. Experiments with boundary lubrication and plain bearings at +60...-60 deg C temperatures, 12:45007 (R;FI;In Finnish)
Wear Resistance
Boundary lubrication. Experiments with boundary lubrication and plain bearings at +60...-60 deg C temperatures, 12:45007 (R;FI;In Finnish)

BEAUTY PARTICLES
Detection
Detecting beauty baryons and heavy beauty mesons with the J/PSI trigger, 12:46513 (R;US)

BEEF
See MEAT

BELGIUM
Government Policies
The need for nuclear power, 12:45575 (RA;US)

BENZOPYRENE
Carcinogenesis
Morphological transformation induced by chemical carcinogens is enhanced by the biologically active metabolite of vitamin D_3, 1α,25-dihydroxycholecalciferol, 12:46322 (J;US)
Specific nuclear antigens expressed in differentiating human myeloid leukemia cells, 12:46323 (J;US)

BERING SEA
Continental Shelf
Outer Continental shelf environmental assessment program. Final reports of principal investigators. Volume 51, 12:45003 (R;US)
Production and dispersion of dissolved methane in southeastern Bering Sea. Final report, 12:45004 (R;US)
Petroleum Deposits
Sub-Arctic deep-water petroleum technology assessment. Social and Economic studies program technical report Number 109. Final report, 12:44995 (R;US)
Seismicity
Measurement and location of earthquakes in western Alaska, the Gulf of Alaska, and the Bering Sea. Final report, 12:46333 (R;US)

BERKELEY BEVALAC
See BEVALAC

BERKELIUM 249 TARGET
Fabrication
Special targets for nuclear reaction and spectroscopic studies, 12:46672 (R;US)

BERKELIUM IONS
Energy Levels
Energy levels of neutral and singly ionized berkelium, /sup 249/Bk I and II, 12:46448 (J;US)
Hyperfine Structure
Energy levels of neutral and singly ionized berkelium, /sup 249/Bk I and II, 12:46448 (J;US)
Infrared Spectra
Energy levels of neutral and singly ionized berkelium, /sup 249/Bk I and II, 12:46448 (J;US)

BERYLLIUM 7 BEAMS
Beam Transport
Radioactive ion beam research at Lawrence Livermore National Laboratory, 12:46096 (J;NL)

BERYLLIUM 7 TARGET
Electron Reactions
Superfluid ^{4}He as a solar neutrino detector, 12:46110 (R;US)
BERYLLIUM 9
Hypernuclei
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)
BERYLLIUM 9 TARGET
J-J Coupling
Spin-spin and isospin interactions from capture measurements, 12:46655 (R;US)
Neutron Reactions
Spin-spin and isospin interactions from capture measurements, 12:46655 (R;US)
Niobium 93 Reactions
Studies of complex fragment emission in heavy ion reactions: Progress report, September 1, 1986 through August 31, 1987, 12:46645 (R;US)
Pion Plus Reactions
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)
BERYLLIUM ALLOYS
Fermi Level
Local-density prediction of the Fermi surface of UBe/sub 13/, 12:45749 (J;US)
BERYLLIUM IONS
Autoionization
Autodetachment spectroscopy of metastable negative ions, 12:46462 (J;NL)
BESSEL DIFFERENTIAL EQUATION
See FOKKER-PLANCK EQUATION
BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS
BETA BEAMS (POSITRONS)
See POSITRON BEAMS
BETA DECAY
For neutron and nuclear decay.
Mass Formulae
Mass formulas and β-decay theory of short-lived nuclei, 12:46691 (RA;JP;In Japanese)
BETA DETECTION
Comparative Evaluations
Apparatus for direct counting of beta-rays from two-dimensional protein gels: measurement of changes in protein synthesis due to changes in density of Chinese hamster ovary cells, 12:45873 (J;US)
BETA SOURCES
Calibration
Development of beta calibration sources at the Pacific Northwest Laboratory, 12:46429 (R;US)
Design
Development of beta calibration sources at the Pacific Northwest Laboratory, 12:46429 (R;US)
Standardization
Development of beta calibration sources at the Pacific Northwest Laboratory, 12:46429 (R;US)
BETATRONS
Electron Beams
Pulsed-power equipment for university accelerator-technology program. Final report, 12:46074 (R;US)
Pulse Generators
Pulsed-power equipment for university accelerator-technology program. Final report, 12:46074 (R;US)
BEVALAC
Beam Optics
Bevalac external beamline optics, 12:46067 (R;US)
BEVERAGE INDUSTRY
Refuse-Fueled Boilers
Combustion of refuse derived fuel on a fixed grate stoker shell boiler at Darleys Brewery, Thorne, 12:45211 (R;GB)
BINARY MIXTURES
Phase Studies
Phase equilibrium data for development of correlations for coal fluids: Report period, February 1, 1987 to August 15, 1987, 12:44854 (R;US)
BIOGAS
See METHANE
BIOGAS PROCESS
Experimental studies on catch fuel crops. Annex 4: catch crop utilization, 12:45189 (R;GB)
Generation of gases from biomass by anaerobic digestion and their practical utilization as fuel, 12:45188 (R;GB)
Feasibility Studies
Experimental studies on catch fuel crops. Final report, 12:45233 (R;GB)
BIOLOGICAL RADIATION EFFECTS
See also DELAYED RADIATION EFFECTS
RADIATION INJURIES
Government Policies
CIRRPC [Committee on Interagency Radiation Research and Policy Coordination]: Twelfth quarterly report, 12:45569 (R;US)
Risk Assessment
CIRRPC [Committee on Interagency Radiation Research and Policy Coordination]: Twelfth quarterly report, 12:45569 (R;US)
BIOLOGICAL REACTORS
See BIOREACTORS
BIOMASS
Anaerobic Digestion
Biological gasification of renewable resources. Annual report, March 1984-February 1985, 12:45205 (R;US)
Combustion
Environmental design considerations for thermochemical biomass energy, 12:45207 (J;GB)
Enzymatic Hydrolysis
Economic feasibility study of an enzyme-based ethanol plant: A subcontract report, 12:45209 (R;US)
Gasification
Biological gasification of renewable resources. Annual report, March 1984-February 1985, 12:45205 (R;US)
Environmental design considerations for thermochemical biomass energy, 12:45207 (J;GB)
Production
Tissue-culture investigations into mechanisms of biomass enhancement. Annual report, June 1985-July 1986, 12:45245 (R;US)
Research Programs
CEC sub-programme of R & D on new energy vectors, 12:44856 (R;XE)
Screening
Biofuels and municipal waste technology research program summary: FY 1986, 12:45230 (R;US)
BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Comparative Evaluations
Comparative testing and evaluation of biomass conversion plants. Final report, 12:45190 (R;DE;In German)
Experiences gained in the operation of the BVT BIMA biomass conversion plant installed on the premises of the Edelhof biogas research and demonstration center, Austria, 12:45242 (RA;DE;In German)
Performance of different types of biogas plants, 12:45201 (RA;DE;In German)
Prospects and perspectives of biomass conversion in Switzerland, 12:45203 (RA;DE;In German)
Design
Edelhof MET-OEMV biomass conversion plant, 12:45196 (RA;DE;In German)
Eternit biomass conversion plant, 12:45195 (RA;DE;In German)
Economics
Technology and economy of different biogas uses, 12:45194 (RA;DE;In German)
Heat Transfer
Heat recovery and heating systems optimization in biomass conversion plants, 12:45197 (RA;DE;In German)
Meetings
Agricultural uses of biogas - latest trends and prospects. Overall report on the results of Austrian biogas research 1980-1985, 12:45191 (R;DE;In German)
Operation
'Harrer' and 'Trummer' biomass conversion plants, 12:45241 (RA;DE;In German)

'Spitzer' biomass conversion plant, 12:45192 (RA;DE;In German)
Biomass conversion pilot plant of the Federal Institute for Agricultural Technology, Wieselburg, 12:45193 (RA;DE;In German)
Edelhof MET-OEMV biomass conversion plant, 12:45196 (RA;DE;In German)
Eternit biomass conversion plant, 12:45195 (RA;DE;In German)
Performance of different types of biogas plants, 12:45201 (RA;DE;In German)
Simple analyses for biomass conversion plants, 12:45199 (RA;DE;In German)
Optimization
Biomass conversion pilot plant of the Federal Institute for Agricultural Technology, Wieselburg, 12:45193 (RA;DE;In German)
Heat recovery and heating systems optimization in biomass conversion plants, 12:45197 (RA;DE;In German)
Pollution Control Equipment
Environmental design considerations for thermochemical biomass energy, 12:45207 (J;GB)
Research Programs
'Harrer' and 'Trummer' biomass conversion plants, 12:45241 (RA;DE;In German)
Comparative testing and evaluation of biomass conversion plants. Final report, 12:45190 (R;DE;In German)
Present and future situation of biogas research in Austria, 12:45239 (RA;DE;In German)
Technology Assessment
Prospects of biomass conversion in the Federal Republic of Germany, 12:45202 (RA;DE;In German)
Prospects and perspectives of biomass conversion in Switzerland, 12:45203 (RA;DE;In German)

BIOMASS PLANTATIONS
Experimental studies on catch fuel crops. Annex 1: field experiment 1980, 12:45234 (R;GB)
Experimental studies on catch fuel crops. Annex 2: field experiment 1981, 12:45235 (R;GB)
Experimental studies on catch fuel crops. Annex 3: field experiment 1982, 12:45236 (R;GB)
Land Use
Growing wood for energy in Great Britain. (The land availability study), 12:45237 (R;GB)

BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Maximum Permissible Exposure
Pilot study for the introduction of dental exposure normalization technique (DENT) in Israel, 12:46253 (RA;IL)
Radiation Hazards
Radiological survey in pediatric X-ray diagnostics, 12:46299 (RA;DD;In German)

BIOPHYSICS
A physico-chemical study of some areas of fundamental significance to biophysics: Annual report, 1986-1987, 12:46411 (R;US)

BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Comparative Evaluations
Fossil energy environmental research including innovative concepts for wastewater, sludge, and product treatment, 12:44822 (R;US)

BIOTECHNOLOGY
The application of principles of technology or engineering to the life sciences.
Research Programs
Biogenic raw materials, 12:45243 (R;DE;In German)

BIPYRIDINES
X-Ray Spectroscopy
Application of EXAFS spectroelectrochemsitry to structural studies of electroactive species immobilized on polymer coated electrodes, 12:45936 (BA;US)

BISMUTH 209 TARGET
Neutron Reactions
Energy dependence of the optical-model potential for fast-neutron scattering from bismuth, 12:46677 (J;US)

BISMUTH ALLOYS
Thermodynamic Properties
Thermodynamic properties of HoBi and HoSb compounds, 12:45722 (RA;SU;In Russian)

BISMUTH OXIDES
Crystal Structure
Structural and dynamical studies of δ-Bi_2O^3 oxide ion conductors. III. Phase relationships in the system (Bi_2O_3)/sub 1-x/(M_2O_3)/sub x/ as a function of pressure and temperature (M = Y, Er, or Yb), 12:45788 (J;US)
Phase Studies
Structural and dynamical studies of δ-Bi_2O^3 oxide ion conductors. III. Phase relationships in the system (Bi_2O_3)/sub 1-x/(M_2O_3)/sub x/ as a function of pressure and temperature (M = Y, Er, or Yb), 12:45788 (J;US)
Thermodynamic Activity
Partial thermodynamic properties of Bi_2O_3 in solid solutions Bi_2O_3-Ta_2O_5, 12:45767 (RA;SU;In Russian)

BISMUTH TELLURIDES
Entropy
Determination of Bi_2Te_3 sublimation enthalpies and entropies according to the data of mass spectrometric study of Bi-Te system, 12:45811 (RA;SU;In Russian)
Sublimation Heat
Determination of Bi_2Te_3 sublimation enthalpies and entropies according to the data of mass spectrometric study of Bi-Te system, 12:45811 (RA;SU;In Russian)

BITUMENS
See also ASPHALTS
Activation Analysis
Pyrolysis of Asphalt Ridge tar sand, 12:45033 (RA;US)
Chemical Properties
Bonding energies of bitumen to tar sand mineral, 12:45036 (RA;US)
Chemical and physical properties of original tar sand bitumens, 12:45052 (RA;US)
Chemical and physical properties of oils produced from tar sand, 12:45053 (RA;US)
Comparison of laboratory and field steamflood test results, 12:45029 (RA;US)
Criteria for the selection and monitoring of in situ, thermal recovery processes, 12:45072 (RA;US)
Hydrogenation
Environmental aspects of coal liquefaction and heavy oil upgrading, 12:44864 (R;XU)
Multi-Element Analysis
Pyrolysis of Asphalt Ridge tar sand, 12:45033 (RA;US)
Physical Properties
Bonding energies of bitumen to tar sand mineral, 12:45036 (RA;US)
Chemical and physical properties of original tar sand bitumens, 12:45052 (RA;US)
Chemical and physical properties of oils produced from tar sand, 12:45053 (RA;US)
Comparison of laboratory and field steamflood test results, 12:45029 (RA;US)
Criteria for the selection and monitoring of in situ, thermal recovery processes, 12:45072 (RA;US)
Pyrolysis
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)
Refining
An evaluation of the potential end uses of a Utah tar sand bitumen, 12:45040 (R;US)
Solvent Extraction
Bonding energies of bitumen to tar sand mineral, 12:45036 (RA;US)
Thermal Cracking
Pyrolysis of Asphalt Ridge tar sand, 12:45033 (RA;US)
Uses
An evaluation of the potential end uses of a Utah tar sand bitumen, 12:45040 (R;US)

BLACK COAL
Cost
US hard coal mining - a study with special regard to the terms of delivery valid for industrial coal exports to the Federal Republic of Germany (FRG), 12:45585 (R;DE;In German)
Imports
US hard coal mining - a study with special regard to the terms of delivery valid for industrial coal exports to the Federal Republic of Germany (FRG), 12:45585 (R;DE;In German)
Market
US hard coal mining - a study with special regard to the terms of delivery valid for industrial coal exports to the Federal Republic of Germany (FRG), 12:45585 (R;DE;In German)
BLACK HOLES
Infrared Spectra
Non-thermal AGN models, 12:46382 (R;US)
Visible Spectra
Non-thermal AGN models, 12:46382 (R;US)
X-Ray Spectra
Non-thermal AGN models, 12:46382 (R;US)
BLADES (COMPRESSOR)
See COMPRESSOR BLADES
BLADES (TURBINES)
See TURBINE BLADES
BLANKETS (BREEDING)

BORATES
Specific compounds, except those of significance to energy reserach and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Absorption Spectroscopy
Improved quantitative spectroscopy by combining least squares methods with principal components analysis, 12:45881 (BA;US)
Formation Heat
Calorimetric study of alkali borates, 12:45914 (RA;SU;In Russian)
Phase Studies
Calorimetric study of alkali borates, 12:45914 (RA;SU;In Russian)
BOREHOLES
Temperature Effects
Measurement of displacements in large boreholes with a strain-gauged proving ring (NNWSI), 12:45149 (J;US)
BORIDES
See also CERIUM BORIDES
LANTHANUM BORIDES
PRASEODYMIUM BORIDES
VANADIUM BORIDES
Quantitative Chemical Analysis
Quantitative electron probe microanalysis of boron in binary borides, 12:45855 (R;NL)
BORON
Electron Microprobe Analysis
Quantitative electron probe microanalysis of boron in binary borides, 12:45855 (R;NL)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
BORON 10 TARGET
J-J Coupling
Spin-spin and isospin interactions from capture measurements, 12:46655 (R;US)
Neutron Reactions
Spin-spin and isospin interactions from capture measurements, 12:46655 (R;US)
BORON ALLOYS
Charge Density
Electronic structure, magnetic moment, charge density, and spin density in $Nd_2Fe_{14}B$, 12:45758 (J;US)
Electronic Structure
Electronic structure, magnetic moment, charge density, and spin density in $Nd_2Fe_{14}B$, 12:45758 (J;US)
Magnetic Moments
Electronic structure, magnetic moment, charge density, and spin density in $Nd_2Fe_{14}B$, 12:45758 (J;US)
Spin
Electronic structure, magnetic moment, charge density, and spin density in $Nd_2Fe_{14}B$, 12:45758 (J;US)
BORON ARSENIDES
Chemical Vapor Deposition
Chemical vapor deposition of B_6P and B_6As films, 12:45818 (R;US)
BORON CARBIDES
Electronic Structure
Analysis of boron carbides' electronic structure. Final technical report, 18 July 1984-17 August 1986, 12:45771 (R;US)
BORON COMPOUNDS
See also BORATES
BORIDES
BORON ARSENIDES
BORON CARBIDES
BORON NITRIDES
BORON PHOSPHIDES
CARBORANES
Chemical Preparation
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)

Crystal Structure
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)
Dielectric Properties
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Electric Contacts
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Electronic Structure

BREEDING BLANKETS
Design
Neutronics study of fusion-fission hybrid blanket in a swimming pool-type tokamak reactor, 12:46916 (RA;JP)
First Wall
Special features of first-wall heat transfer in liquid-metal fusion reactor blankets, 12:46937 (J;US)
BREMSSTRAHLUNG
Absorption
Improvements in the coefficient for inverse bremsstrahlung laser absorption, 12:46005 (RA;US)
BROMINE
Transport
Analysis and predictions of water and solute transport in a large lysimeter, 12:46227 (RA;US)
Finite element simulation of moisture movement and solute transport in a large caisson, 12:46230 (RA;US)
Simulation of ion movement in soil using a continuous-time Markov process, 12:46228 (RA;US)
Time and frequency domain analysis of tracer migration in crushed tuff, 12:46229 (RA;US)
BROMINE BROMIDES
See BROMINE
BRONCHOGENIC CARCINOMA
See CARCINOMAS
BRONZE
Bonding
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Structural Chemical Analysis
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Wear
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
BROOKHAVEN AGS
Beam Focusing Magnets
Focusing horn upgrades, 12:46079 (RA;US)
Beam Transport
Focusing horn upgrades, 12:46079 (RA;US)
Neutrino flux calculations for the AGS Narrow Band Beam, 12:46080 (RA;US)
Tandem injected relativistic heavy ion facility at Brookhaven: Present and future, 12:46076 (R;US)
Ion Beam Injection
Tandem injected relativistic heavy ion facility at Brookhaven: Present and future, 12:46076 (R;US)
Modifications
Design and status of the AGS booster accelerator, 12:46054 (RA;US)
Tandem injected relativistic heavy ion facility at Brookhaven: Present and future, 12:46076 (R;US)
BROOKHAVEN NATIONAL LABORATORY
See BNL
BROOKHAVEN RHIC
Relativistic Heavy Ion Collider facility located in former Isabelle Storage Ring tunnel.

Design
The relativistic heavy ion collider project at Brookhaven, 12:46053 (R;US)
Experiment Planning
The relativistic heavy ion collider project at Brookhaven, 12:46053 (R;US)
Magnetic Spectrometers
An approximately 4π tracking magnetic spectrometer for RHIC, 12:46104 (R;US)

BUILDING MATERIALS
See also CEMENTS
CONCRETES
Radioactivity
Emanation measurements of materials used in housing building, 12:45859 (RA;DD;In Russian)
Waste Product Utilization
Use and disposal of end-products (Stabilisa) of spray dryer absorption process, 12:44920 (R;XU)

BUILDINGS

CONTAINMENT BUILDINGS
GREENHOUSES
HOSPITALS
OFFICE BUILDINGS
RESIDENTIAL BUILDINGS
SCHOOL BUILDINGS
Air Conditioning
Report on the 1985 annual meeting of the German Association of Refrigeration and Air-Conditioning Engineering (DKV), 12:45602 (R;DE;In German)
Air Flow
Numerical air flow modelling, 12:45600 (R;GB)
Use of re-circulation air and the filtration of air, 12:45663 (R;FI;In Finnish)
Energy Conservation
DOE-2: BDL summary, Version 2.1C, 12:45654 (R;US)
DOE-2: sample run book, Version 2.1C, 12:45653 (R;US)
DOE-2: supplement, Version 2.1C, 12:45655 (R;US)
NBSLCC program (for microcomputers). Software, 12:45659 (R;US)
Selection of air-to-air heat recovery systems. Technical note, 12:45601 (R;GB)
Energy Consumption
Factors affecting the development of district heating activity, 12:45686 (R;FI;In Finnish)
Energy Demand
Illinois state buildings energy-expense study FY86 and projected FY87-90, 12:45567 (R;US)
Energy Expenses
Illinois state buildings energy-expense study FY86 and projected FY87-90, 12:45567 (R;US)
Energy Management Systems
Report on the 1985 annual meeting of the German Association of Refrigeration and Air-Conditioning Engineering (DKV), 12:45602 (R;DE;In German)
Heat Pumps
Report on the 1985 annual meeting of the German Association of Refrigeration and Air-Conditioning Engineering (DKV), 12:45602 (R;DE;In German)
Heat Recovery Equipment
Selection of air-to-air heat recovery systems. Technical note, 12:45601 (R;GB)
Indoor Air Pollution
Use of re-circulation air and the filtration of air, 12:45663 (R;FI;In Finnish)
Photovoltaic Power Supplies
Prospects for photovoltaic power supplies in buildings. Technical note, 12:45252 (R;GB)
Space Heating
Factors affecting the development of district heating activity, 12:45686 (R;FI;In Finnish)

BUILDINGS (CONTAINMENT)

BURNERS
See also GAS BURNERS
Technology Assessment
Low-emission combustion processes, 12:44908 (R;XU)

BUSES
Dual-Fuel Engines
Dual-fuel school bus demonstration: Final report, 12:45699 (R;US)

BUTADIENE
Indoor Air Pollution
Industry-wide studies report of an in-depth survey at Denka Chemical Corporation, Houston, Texas, July 14-17, 1986, 12:46174 (R;US)
Industrywide studies report of an in-depth survey at E.I. duPont Denemours and Company, Sabine River Works, Orange, Texas, August 25-28, 1986, 12:46173 (R;US)

BUTANE
Absorption Spectroscopy
Remote near infrared analyses of combustion gases over optical fibers, 12:45886 (BA;US)

BWR TYPE REACTORS
See also FUKUSHIMA-3 REACTOR
HDR REACTOR
KASHIWAZAKI-1 REACTOR
ONAGAWA-1 REACTOR
PEACH BOTTOM-2 REACTOR
VERMONT YANKEE REACTOR
After-Heat Removal
An RHR operation guide system based on knowledge engineering, 12:45417 (RA;JP)
Chemical Reaction Kinetics
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
Computerized Control Systems
Advanced core-monitoring framework: Computer code manual, 12:45393 (R;US)
Computerized Simulation
Expert system application to fault diagnosis and procedure synthesis, 12:45445 (RA;US)
Containment Buildings
Seismic capability of containments including pressure effects, 12:45497 (RA;US)
Containment Systems
An evaluation of the effects of design details on the capacity of LWR [Light-water reactor] steel containment buildings, 12:45337 (R;US)
Control Rod Drives
Improved control rod drive handling equipment for BWRs [boiling-water reactors]: Final report, 12:45396 (R;US)
Display Devices
A computerized operator support system for BWR Power Plant (III): Structure of CRT pictures, 12:45416 (RA;JP)
Expert Systems
An expert system for sensor data validation and malfunction detection, 12:45447 (RA;US)
Application of artificial intelligence to the operation of nuclear power plants: Progress report, September 15, 1986-June 4, 1987, 12:45444 (R;US)
The structure of an expert system to diagnose and supply a corrective procedure for nuclear power plant malfunctions, 12:45448 (RA;US)
High-Level Radioactive Wastes
The properties of the vitrified concentrated wastes in BWR, 12:45336 (RA;JP)
Knowledge Base
An RHR operation guide system based on knowledge engineering, 12:45417 (RA;JP)
Loss of Coolant
Analysis of ROSA-III large break test by TRAC-BD1, 12:45489 (RA;JP)
Effects of weathering on impregnated charcoal removal efficiency for radioactive methyl iodide, 12:45491 (RA;JP)
Meltdown
CORCON-VANESA sensitivity study for Mark I BWR design, 12:45477 (RA;US)
Effects of lateral separation of oxidic and metallic core debris on the BWR MK I containment drywell floor, 12:45478 (RA;US)

Power Distribution
Critical experiments on determination of power distribution by means of gamma sensitive detector in BWRs, 12:45333 (RA;JP)
Radioactive Aerosols
Effects of weathering on impregnated charcoal removal efficiency for radioactive methyl iodide, 12:45491 (RA;JP)
Radioactive Effluents
Development of a hollow fiber for liquid waste treatment, 12:45131 (RA;JP)
Reactor Components
Examination of methods of analysing structural dynamics for their applicability in licensing procedures. Recent experience, results, and trends concerning the seismic load conditions, 12:45431 (R;DE;In German)
Reactor Control Systems
A computerized operator support system for BWR Power Plant (III): Structure of CRT pictures, 12:45416 (RA;JP)
Application of artificial intelligence to the operation of nuclear power plants: Progress report, September 15, 1986-June 4, 1987, 12:45444 (R;US)
Compact analyzer for BWR [Boiling Water Reactor] applications: Final report, 12:45395 (R;US)
CSRL application to nuclear power plant diagnosis and sensor data validation, 12:45446 (RA;US)
Expert system application to fault diagnosis and procedure synthesis, 12:45445 (RA;US)
Reactor Cooling Systems
Analysis of ROSA-III large break test by TRAC-BD1, 12:45489 (RA;JP)
New safety analysis code assessment using ROSA-III test data, 12:45490 (RA;JP)
The structure of an expert system to diagnose and supply a corrective procedure for nuclear power plant malfunctions, 12:45448 (RA;US)
Reactor Core Disruption
Characteristics of releases from TREAT source-term experiment STEP-1, 12:45515 (J;US)
Reactor Operation
Licensee Event Report (LER) compilation for month of July 1987, 12:45377 (R;US)
TARMS [Toshiba Advanced Reactor Management System]: An on-line boiling water reactor operation management system, 12:45492 (RA;JP)
Reactor Physics
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
Reactor Safety
Characteristics of releases from TREAT source-term experiment STEP-1, 12:45515 (J;US)
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
New safety analysis code assessment using ROSA-III test data, 12:45490 (RA;JP)
Seismic capability of containments including pressure effects, 12:45497 (RA;US)
Seismic margins review of nuclear power plants: NRC program overview, 12:45496 (RA;US)
The structure of an expert system to diagnose and supply a corrective procedure for nuclear power plant malfunctions, 12:45448 (RA;US)
Seismic Effects
Seismic margins review of nuclear power plants: NRC program overview, 12:45496 (RA;US)
Water Chemistry
Corrosion studies under hydrogenated water chemistry, 12:45335 (RA;JP)
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
BY-PRODUCTS
Chemical Analysis
Separation and detection of sulfur, nitrogen, and arsenic species in oil shale by-product waters using ion chromatography, 12:45060 (RA;US)
Chemical Composition
Separation and detection of sulfur, nitrogen, and arsenic species in oil shale by-product waters using ion chromatography, 12:45060 (RA;US)

C

C CODES
Description and procedures of the Environmental Radiation Dosimetry Program, 12:46206 (R;US)
CABBAGE
See BRASSICA
CABIBBO ANGLE
Implications of the observed K-M angles on future physics, 12:46579 (BA;US)
KMC unitarity and new physics, 12:46573 (BA;US)
CADARACHE RAPSODIE REACTOR
See RAPSODIE REACTOR
CADMIUM
Acute Exposure
Acute and chronic intoxication with cadmium - a comparative study of intoxication symptoms, 12:46310 (R;DE;In German)
Air Pollution
Morton arboretum bioassays: earthworm bioassay procedures to evaluate the extent of aerially dispersed lead and cadmium in an urban arboretum, 12:46160 (R;NL)
Dislocations
Positron-dislocation interaction in deformed Zn and Cd, 12:46759 (RA;DD)
Environmental Transport
Kinetics and mechanisms of the release of trace inorganic contaminants to ground water from coal ash basins on the Savannah River Plant: Progress report, September 29, 1986-September 30, 1987, 12:46199 (R;US)
Quantity Ratio
Lead and cadmium contents in the odontolith of workers of a cement factory, 12:46309 (R;DE;In German)
Toxicity
Acute and chronic intoxication with cadmium - a comparative study of intoxication symptoms, 12:46310 (R;DE;In German)
Organization of amplified metallothionein (MT) genes in cadmium-resistant Chinese hamster cells, 12:46320 (J;US)
CADMIUM 109
Decay
Annual progress report on nuclear data, 1986, 12:46678 (R;BE)
CADMIUM ALLOYS
De Haas-Van Alphen Effect
Electronic structure of ordered intermetallic compounds Cd/sub 3/Mg and Mg/sub 3/Cd, 12:46735 (R;SU;In Russian)
Experimental study of the de Haas-van Alphen effect in the intermetallic compound Cd/sub 3/Mg, 12:46734 (R;SU;In Russian)
Electronic Structure
Electronic structure of ordered intermetallic compounds Cd/sub 3/Mg and Mg/sub 3/Cd, 12:46735 (R;SU;In Russian)
Experimental study of the de Haas-van Alphen effect in the intermetallic compound Cd/sub 3/Mg, 12:46734 (R;SU;In Russian)
Order-Disorder Transformations
Positron study of the order-disorder transition in an $MgCd_3$ alloy, 12:46761 (RA;DD)
CADMIUM CHLORIDES
Enthalpy
Determination of thermodynamic values of liquid and vapor from measurements of total saturated vapor pressure, 12:45921 (RA;SU;In Russian)
Vapor Pressure
Determination of thermodynamic values of liquid and vapor from measurements of total saturated vapor pressure, 12:45921 (RA;SU;In Russian)

CADMIUM COMPLEXES
Dissociation Heat
Thermochemistry of crystallosolvates of some metal chlorides, 12:45908 (RA;SU;In Russian)
Formation Heat
Thermochemistry of crystallosolvates of some metal chlorides, 12:45908 (RA;SU;In Russian)
Supercritical Fluid Chromatography
Separation of metal-containing compounds by supercritical fluid chromatography, 12:45863 (J;US)
CADMIUM COMPOUNDS
See also CADMIUM SELENIDES
CADMIUM TELLURIDES
Chemical Reaction Kinetics
Use of a computer controlled flow injection analysis system for the rapid on-line determination of distribution coefficients, 12:45878 (BA;US)
Solvent Extraction
Use of a computer controlled flow injection analysis system for the rapid on-line determination of distribution coefficients, 12:45878 (BA;US)
CADMIUM SELENIDES
Specific Heat
Specific heat of cadmium selenide in the temperature range 360-760 K, 12:45810 (RA;SU;In Russian)
CADMIUM TELLURIDE SOLAR CELLS
Fabrication
Preparation and properties of evaporated CdTe films: Final subcontract report, 16 February 1985-31 March 1987, 12:45248 (R;US)
CADMIUM TELLURIDES
Deposition
Preparation and properties of evaporated CdTe films: Final subcontract report, 16 February 1985-31 March 1987, 12:45248 (R;US)
CALCIUM
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
CALCIUM 40
Hypernuclei
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)
CALCIUM 40 TARGET
Nuclear Quadrupole Resonance
Isospin structure of giant resonances from pion inelastic scattering, 12:46664 (J;US)
Pion Plus Reactions
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)
Pion Reactions
Isospin structure of giant resonances from pion inelastic scattering, 12:46664 (J;US)
CALCIUM 42 TARGET
Titanium 48 Reactions
Quasi-elastic transfer and charge-exchange reactions in collisions of /sup 48/Ti on /sup 42/Ca and /sup 26/Mg, 12:46662 (R;DE;In German)
CALCIUM 44 TARGET
Pion Plus Reactions
Double charge exchange to the double isobaric analog state at T/sub π/—292 MeV, 12:46661 (J;US)
CALCIUM IONS
Ion-Atom Collisions
Ion-X-ray coincidence measurements in heavy ion collisions, 12:46459 (J;NL)
Ion-X-ray coincidence measurements in heavy ion collisions, 12:46472 (J;NL)
Ion-Molecule Collisions
Ion-X-ray coincidence measurements in heavy ion collisions, 12:46459 (J;NL)
Ion-X-ray coincidence measurements in heavy ion collisions, 12:46472 (J;NL)
CALCULATIONS (COMPUTER)
See COMPUTER CALCULATIONS
CALDERAS
Geologic Models
Gravity and fault structures, Long Valley caldera, California, 12:45285 (R;US)
CALIBRATION
C Codes
Description and procedures of the Environmental Radiation Dosimetry Program, 12:46206 (R;US)
CALIBRATION STANDARDS
Surveys
Survey of DOE contractors' standards and calibration practices, 12:46711 (R;US)
CALIFORNIA
See also LONG VALLEY
Energy Supplies
Quarterly oil report: First quarter, 1987, 12:44993 (R;US)
Naval Petroleum Reserve
Biological survey of Naval Petroleum Reserve No. 2 (Buena Vista), Kern County, California, 12:46208 (R;US)
CALIFORNIUM 252 TARGET
Neutron Reactions
Annual progress report on nuclear data, 1986, 12:46678 (R;BE)
CALORIMETERS
Calibration
Development of a high-sensitivity, computer-controlled titration calorimeter, 12:46135 (J;US)
Computerized Control Systems
Development of a high-sensitivity, computer-controlled titration calorimeter, 12:46135 (J;US)
Design
Development of a high-sensitivity, computer-controlled titration calorimeter, 12:46135 (J;US)
CALORIMETERS (PARTICLE)
See SHOWER COUNTERS
CALORIMETRIC DOSEMETERS
Calibration
Thin-foil x-ray dosimeters with millisecond response time dose and heat-flow calculations, 12:46118 (R;US)
Design
Thin-foil x-ray dosimeters with millisecond response time dose and heat-flow calculations, 12:46118 (R;US)
CANADA
See also NOVA SCOTIA
Fluidized-Bed Combustors
Description of the Mark II atmospheric fluidized bed combustor at the Combustion and Carbonization Research Laboratory, CANMET, 12:44956 (R;CA)
Surface Mining
Potential for blast casting in Canadian surface mines, 12:44947 (R;CA)
Underground Mining
Simplistic classification of Western Canadian coal seams with respect to their potential for development as underground mines, 12:44943 (R;CA)

CHROMIUM CARBIDES
SILICON CARBIDES
Chemical Preparation
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)

Crystal Structure
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)
Erosion
The erosion of carbide-metal composites, 12:45763 (BA;US)
Wear Resistance
The erosion of carbide-metal composites, 12:45763 (BA;US)

CARBINOL
See METHANOL

CARBON
See also ACTIVATED CARBON
CARBON BLACK
GRAPHITE
Catalytic Effects
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 April-30 June 1985, 12:44846 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January 1985-31 March 1985 (Pretreatment of Ambersorb XE-340 carbon by acids oxidizing agents or ammonia), 12:44845 (R;US)
Chemical Vapor Deposition
Carbon film and its applications, 12:46913 (R;JP;In Japanese)
Ion Collisions
Heavy-particle collisions in the plasma edge, 12:46841 (R;US)
Measured multipole moments of continuum electron transfer angular distributions, 12:46469 (J;NL)
Mass Spectroscopy
Low-voltage, high-resolution mass spectrometric methods for fuel analysis: application to coal distillates, 12:44880 (J;US)
Phase Studies
Three phase carbon EOS model with electronic excitation, 12:46783 (R;US)
Proton Reactions
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)

CARBON 12 REACTIONS
Neutron Spectra
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)

CARBON 12 TARGET
Carbon 12 Reactions
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
Nitrogen 14 Reactions
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
Pion Minus Reactions
Angular dependence of slope parameters of invariant inclusive cumulative hadron production cross section in pC-interactions at 10 Gev/c and in π/sup -/C-interactions at 40 Gev/c, 12:46656 (R;SU;In Russian)
Proton Reactions
Angular dependence of slope parameters of invariant inclusive cumulative hadron production cross section in pC-interactions at 10 Gev/c and in π/sup -/C-interactions at 40 Gev/c, 12:46656 (R;SU;In Russian)
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)

CARBON 13
Hypernuclei
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)

CARBON 13 TARGET
Pion Plus Reactions
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)

CARBON 14 TARGET
Alpha Reactions
Spectroscopy of /sup 18/O: Radiative capture, /sup 14/C(α,γ)/sup 18/O, 12:46657 (J;US)
Pion Plus Reactions
Mass dependence of pion single-charge exchange to the isobaric analog state at 20 MeV, 12:46658 (J;US)

CARBON BLACK
Combustion
Clean carbon and hydrogen fuels from coal and other carbonaceous raw materials (HYDROCARB process), 12:45186 (R;US)

CARBON COMPOUNDS
See also CARBIDES
CARBON FLUORIDES
CARBON OXYSULFIDE
CARBORANES
Carrier Lifetime
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Molecular Structure
Vibrational spectroscopic characterization of the CCO ligand and the possible occurrence of CCO on surfaces, 12:45933 (J;US)
Raman Spectra
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Vibrational spectroscopic characterization of the CCO ligand and the possible occurrence of CCO on surfaces, 12:45933 (J;US)
Reflectivity
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Sorptive Properties
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)

CARBON DIOXIDE
Chemical Reaction Kinetics
Expansion of high-temperature: High-pressure data set for coal gasification: Quarterly report for the period December 28, 1986-March 28, 1987, 12:44840 (R;US)
Critical Pressure
Phase equilibrium data for development of correlations for coal fluids: Report period, February 1, 1987 to August 15, 1987, 12:44854 (R;US)
Critical Temperature
Phase equilibrium data for development of correlations for coal fluids: Report period, February 1, 1987 to August 15, 1987, 12:44854 (R;US)
Crystallization
CNG acid gas removal process: Final report, 12:44839 (R;US)
Ecological Concentration
Precipitation fluctuations over Northern Hemisphere land areas since the mid-19th century, 12:46182 (J;US)
Environmental Effects
Precipitation fluctuations over Northern Hemisphere land areas since the mid-19th century, 12:46182 (J;US)
Environmental Impacts
Detection of changes in the global troposphere temperature field induced by greenhouse gasses, 12:46181 (R;US)
Master index for the carbon dioxide research state-of-the-art report series, 12:46163 (R;US)
Equations of State
Phase equilibrium data for development of correlations for coal fluids: Report period, February 1, 1987 to August 15, 1987, 12:44854 (R;US)
Indexes
Master index for the carbon dioxide research state-of-the-art report series, 12:46163 (R;US)
Removal
CNG acid gas removal process: Final report, 12:44839 (R;US)
Triple Point
CNG acid gas removal process: Final report, 12:44839 (R;US)

CARBON DIOXIDE INJECTION
Bench-Scale Experiments
Contracts for field projects and supporting research on enhanced oil recovery: Progress review No. 47, Quarter ending June 1986, 12:44977 (R;US)

CARBON DIOXIDE LASERS
Plasma Diagnostics
Study on the characteristics of CO/sub 2/-laser for scattering diagnostics at tokamak devices, 12:46856 (R;SU;In Russian)

Pulses
New discharge pumping method for CO_2 lasers. Technical report (Final), 26 September 1986-30 May 1987, 12:46000 (R;US)
Pumping
New discharge pumping method for CO_2 lasers. Technical report (Final), 26 September 1986-30 May 1987, 12:46000 (R;US)

CARBON FIBERS
Performance Testing
Anti-abrasion protection with highly organized materials, 12:45821 (R;US)

CARBON FLUORIDES
Absorption Spectroscopy
Picosecond dynamical temporal evolution of molecular IR absorption spectra, 12:45939 (BA;US)
Infrared Spectra
Picosecond dynamical temporal evolution of molecular IR absorption spectra, 12:45939 (BA;US)

CARBON IONS
Ion-Atom Collisions
Evidence for correlated double-electron capture in slow collisions of multicharged ions with He and H_2, 12:46466 (J;NL)
Surgery of fast, highly charged ions studied by zero-degree Auger spectroscopy, 12:46467 (J;NL)
Ion-Molecule Collisions
Evidence for correlated double-electron capture in slow collisions of multicharged ions with He and H_2, 12:46466 (J;NL)

CARBON MONOXIDE
Reduction
Mechanistic studies of carbon monoxide reduction: Progress report, January 1, 1985-June 1, 1987, 12:45904 (R;US)
Solubility
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)

CARBON OXIDE SULFIDE
See CARBON OXYSULFIDE

CARBON OXYSULFIDE
Absorption
CNG acid gas removal process: Final report, 12:44839 (R;US)
Removal
CNG acid gas removal process: Final report, 12:44839 (R;US)

CARBON STEELS
Erosion
The erosion of carbide-metal composites, 12:45763 (BA;US)
Wear Resistance
The erosion of carbide-metal composites, 12:45763 (BA;US)

CARBONYL SULFIDE
See CARBON OXYSULFIDE

CARBONYLS
Only for compounds of metals with carbonyl radicals.
Molecular Structure
Vibrational spectroscopic characterization of the CCO ligand and the possible occurrence of CCO on surfaces, 12:45933 (J;US)
Raman Spectra
Vibrational spectroscopic characterization of the CCO ligand and the possible occurrence of CCO on surfaces, 12:45933 (J;US)
X-Ray Spectroscopy
EXAFS spectroelectrochemistry of coordination complexes in non-aqueous solutions, 12:45876 (BA;US)

CARBORANES
Ionization Potential
Determination of ionization energies of carboranes-12 and their C- and B-derivatives, 12:45906 (RA;SU;In Russian)

CARBOXYLASE
Biochemical Reaction Kinetics
Site-directed mutagenesis of lysine-329 of ribulose bisphosphate carboxylase/oxygenase from Rhodospirillum rubrum, 12:46247 (J;US)
Enzyme Activity
Restoration of enzyme activity to the Cys-329 mutant of ribulose biphosphate carboxylase/oxygenase by aminoethylation, 12:46248 (J;US)

CARCINOGENESIS
Genetics
Radiation sensitivity as a genetic factor in carcinogenesis, 12:46292 (RA;JP;In Japanese)

CARCINOGENS
Health Hazards
Health assessment of exposure to developmental toxicants, 12:45543 (R;US)
Uptake
Mutagenicity in Salmonella of hazardous wastes and urine from rats fed these wastes, 12:46317 (R;US)

CARCINOMAS
Combined Therapy
Alternation of chemotherapy (CT) and radiotherapy (RT) in squamous cell carcinoma of the head and neck (SCC-HN): a phase III study, 12:46252 (RA;HU)
Radioinduction
Radiation carcinogenesis: time-dose relationships, 12:46301 (J;US)

CARPOOLING
Data Analysis
High-occupancy vehicle treatments, impacts, and parameters (a synthesis). Volume 2. Bibliography and data. Final report, 12:45669 (R;US)

CASKS
See also SPENT FUEL CASKS
Controlled Atmospheres
Spent Fuel Dry Cask Storage program at the Idaho National Engineering Laboratory (Viewgraphs only), 12:45093 (RA;US)
Decontamination
International spent fuel storage update, 12:45105 (RA;US)
Design
Rigid performance requirements assure public safety by regulations, 12:45109 (R;US)
Spent fuel storage technical exchange, 12:45092 (R;US)
Temperature limits for dry spent fuel storage, 12:45103 (RA;US)
Virginia Power/DOE/EPRI PWR spent fuel storage cask performance testing and analysis (Viewgraphs only), 12:45094 (RA;US)
Heat Transfer
RG & E/ESEERCO spent fuel consolidation and characterization project report, 12:45101 (RA;US)
High-Level Radioactive Wastes
Status of NUHOMS technology (Viewgraphs), 12:45097 (RA;US)
Licensing
RG & E/ESEERCO spent fuel consolidation and characterization project report, 12:45101 (RA;US)
Surry Power Station dry cask ISFSI (Viewgraphs only), 12:45095 (RA;US)
Materials
International spent fuel storage update, 12:45105 (RA;US)
Performance Testing
Spent Fuel Dry Cask Storage program at the Idaho National Engineering Laboratory (Viewgraphs only), 12:45093 (RA;US)
Virginia Power/DOE/EPRI PWR spent fuel storage cask performance testing and analysis (Viewgraphs only), 12:45094 (RA;US)
Recommendations
Temperature limits for dry spent fuel storage, 12:45103 (RA;US)
Shielding
Development of the H.B. Robinson plant independent spent fuel storage installation, 12:45096 (RA;US)
Temperature Distribution
Results of rod consolidation at West Valley, 12:45102 (RA;US)
Transport
International spent fuel storage update, 12:45105 (RA;US)
Spent fuel storage technical exchange, 12:45092 (R;US)

Spent Fuel Dry Cask Storage program at the Idaho National Engineering Laboratory (Viewgraphs only), 12:45093 (RA;US)
Surry Power Station dry cask ISFSI (Viewgraphs only), 12:45095 (RA;US)

CASTE (INSECTS)
See INSECTS

CATALYST SUPPORTS
Chemical Preparation
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 April-30 June 1985, 12:44846 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January 1985-31 March 1985, 12:44845 (R;US)
Comparative Evaluations
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 April-30 June 1985, 12:44846 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January 1985-31 March 1985, 12:44845 (R;US)

CATALYSTS
Chemical Preparation
Catalytic methods for improved coal liquefaction and hydrotreating: Quarterly report No. 7 for the period March 23, 1987 through June 22, 1987, 12:44851 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 April-30 June 1985, 12:44846 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January 1985-31 March 1985, 12:44845 (R;US)
Preparation and optimisation of coal hydrotreating catalysts, 12:44858 (R;AU)
Deactivation
Control of catalyst deactivation with ammonia: Quarterly report for period June 1, 1987 to August 31, 1987, 12:44850 (R;US)
Performance Testing
Preparation and optimisation of coal hydrotreating catalysts, 12:44858 (R;AU)
Regeneration
Control of catalyst deactivation with ammonia: Quarterly report for period June 1, 1987 to August 31, 1987, 12:44850 (R;US)
Research Programs
Transition metal activation and functionalization of C-H [carbon-hydrogen] bonds: Progress report for period June 1, 1986-November 30, 1987, 12:45905 (R;US)
Specificity
Catalytic methods for improved coal liquefaction and hydrotreating: Quarterly report No. 7 for the period March 23, 1987 through June 22, 1987, 12:44851 (R;US)

CATALYTIC CONVERTERS
Exhaust Gases
Gaseous pollutant emissions of a 1.8 litre Volkswagen Scirocco without and with three-way catalyst systems, 12:45705 (R;GB)

CATAPHORESIS
See ELECTROPHORESIS

CAULIFLOWER
See BRASSICA

CAUSTIC FLOODING
Bench-Scale Experiments
Contracts for field projects and supporting research on enhanced oil recovery: Progress review No. 47, Quarter ending June 1986, 12:44977 (R;US)

CAVITIES
See also BOREHOLES
Excavation
Excavation of the Partial Seam CRIP underground coal gasification test site, 12:44863 (R;US)
Growth
Excavation of the Partial Seam CRIP underground coal gasification test site, 12:44863 (R;US)

CAVITY RESONATORS
See also SUPERCONDUCTING CAVITY RESONATORS
Performance Testing
Hermes-III prototype cavity tests, 12:46085 (R;US)

CDFR REACTOR
Cover Gas
Fast reactor primary cover gas system proposals for CDFR, 12:45357 (RA;XE)

CELL CULTURES
Growth
Cooperative research in coal liquefaction infratechnology and generic technology development: Quarterly report, April 1, 1987-July 1, 1987, 12:44852 (R;US)
Maintenance
Cooperative research in coal liquefaction infratechnology and generic technology development: Quarterly report, April 1, 1987-July 1, 1987, 12:44852 (R;US)

CELL DIFFERENTIATION
Biochemistry
[Differentiation and carcinogenesis: An integrated multilevel study of mechanisms from molecules to man], 12:46249 (R;US)
The impact of energy-related pollutants on chromosome structure: Final report, January 1, 1984-December 31, 1986, 12:46306 (R;US)

CELL GROWTH (ANIMAL)
See ANIMAL CELLS

CELL GROWTH (PLANT)
See PLANT CELLS

CELL KILLING
Biological Pathways
Ionizing radiation-induced DNA damage. Its detection and relevance to cellular lethality, 12:46289 (RA;JP;In Japanese)

CELL MEMBRANES
Radiosensitivity
Neutron RBEs and the radiosensitive target for mouse immature oocyte killing, 12:46302 (J;US)

CELLS (ANIMAL)
See ANIMAL CELLS

CELLS (PLANT)
See PLANT CELLS

CEMENTS
Waste Product Utilization
Use and disposal of end-products (Stabilisa) of spray dryer absorption process, 12:44920 (R;XU)

CENTRAL RECEIVER POWER PLANTS
See TOWER FOCUS POWER PLANTS

CENTRAL RECEIVERS
Computerized Simulation
Demonstration of a personal computer based dynamic simulation and control system analysis tool used to evaluate and tune the major control loops of the Sandia Central Receiver, 12:45260 (R;US)
Control Systems
Demonstration of a personal computer based dynamic simulation and control system analysis tool used to evaluate and tune the major control loops of the Sandia Central Receiver, 12:45260 (R;US)
Fluid Flow
Direct Absorption Receiver flow experiments, 12:45259 (R;US)
Molten Salts
Direct Absorption Receiver flow experiments, 12:45259 (R;US)
Research Programs
Solar thermal technology: Annual report, Fiscal Year 1986, 12:45257 (R;US)

CENTRIFUGAL PUMPS
Design
Improvement of the efficiency of double-suction high-power centrifugal pumps, 12:45678 (RA;GB)
Energy Efficiency
Improvement of the efficiency of double-suction high-power centrifugal pumps, 12:45678 (RA;GB)
Modifications
Improvement of the efficiency of double-suction high-power centrifugal pumps, 12:45678 (RA;GB)

CENTRIFUGE ENRICHMENT PLANTS
Power Supplies
Gas centrifuge power supplies (inverters): Key components and subassemblies, 12:45078 (R;US)
CERAMICS
Defects
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
Fracture Mechanics
Mixed-mode fracture criteria for reliability analysis and design with structural ceramics, 12:45792 (B;US)
Fracture Properties
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
Mixed-mode fracture criteria for reliability analysis and design with structural ceramics, 12:45792 (B;US)
Radiation Doses
Radiation exposure from glazed, uranium-bearing pottery or porcelain ware, 12:46281 (R;DE;In German)
Thermodynamic Properties
AGT101 - Ceramic gas turbine development, 12:45703 (B;US)
CERAMICS INDUSTRY
Energy Conservation
Production of α-wollastonite and its application in ceramics for reducing energy consumption. Final report, 12:45766 (R;DE;In German)
Raw Materials
Production of α-wollastonite and its application in ceramics for reducing energy consumption. Final report, 12:45766 (R;DE;In German)
CERIUM ALLOYS
Electronic Specific Heat
Ce(Cu/sub 0.9/Ag/sub 0.1/)$_6$: Highest electronic specific-heat coefficient of the heavy-fermion systems, 12:45750 (J;US)
Kondo Effect
Ce(Cu/sub 0.9/Ag/sub 0.1/)$_6$: Highest electronic specific-heat coefficient of the heavy-fermion systems, 12:45750 (J;US)
Magnetic Susceptibility
Ce(Cu/sub 0.9/Ag/sub 0.1/)$_6$: Highest electronic specific-heat coefficient of the heavy-fermion systems, 12:45750 (J;US)
CERIUM BORIDES
Fabrication
Fabrication and characterization of rare earth hexaboride single-crystal materials, 12:45765 (R;US)
CERIUM COMPLEXES
Thermodynamic Activity
Calculation of activity coefficients of dissolved substances from activities of solvent in multicomponent nonaqueous solutions (Complexes of Eu, Ce), 12:45928 (RA;SU;In Russian)
CERIUM COMPOUNDS
See also CERIUM BORIDES
Fluorescence Spectroscopy
High sensitivity optical detection methods in hydroxide eluent suppressed anion chromatography via post suppression ion exchange, 12:45871 (J;US)
Ion Exchange Chromatography
High sensitivity optical detection methods in hydroxide eluent suppressed anion chromatography via post suppression ion exchange, 12:45871 (J;US)
CERIUM ISOTOPES
De-Excitation
Beta-decay of light rare-earth /sup 130,132/Pr and /sup 132,134/Pm nuclei, 12:46671 (J;DE)
Excited States
Beta-decay of light rare-earth /sup 130,132/Pr and /sup 132,134/Pm nuclei, 12:46671 (J;DE)
CERMETS
Corrosion
Erosion research on the U.S. Department of Energy Fossil Energy Materials Program, 12:45760 (B;US)
Erosion
Erosion research on the U.S. Department of Energy Fossil Energy Materials Program, 12:45760 (B;US)
The erosion of carbide-metal composites, 12:45763 (BA;US)
Research Programs
Erosion research on the U.S. Department of Energy Fossil Energy Materials Program, 12:45760 (B;US)
Wear Resistance
The erosion of carbide-metal composites, 12:45763 (BA;US)
CESIUM
Acoustic Measurements
Laser optogalvanic and photoacoustic studies of some atoms and small molecules, 12:46418 (R;US)
Laser Spectroscopy
Laser optogalvanic and photoacoustic studies of some atoms and small molecules, 12:46418 (R;US)
Laser optogalvanic spectroscopy of iodine and cesium, 12:46415 (RA;US)
Rydberg States
Laser optogalvanic spectroscopy of iodine and cesium, 12:46415 (RA;US)
CESIUM 137
Radioecological Concentration
An aerial radiological survey of the White Oak Creek Floodplain, Oak Ridge Reservation, Oak Ridge, Tennessee: Date of survey: September-October 1986, 12:45151 (R;US)
An aerial radiological survey of Areas 12, 15, 17 and 19, Nevada Test Site: Date of survey: October-November 1984, 12:45122 (R;US)
Site surveillance and maintenance program for Palos Park: Report for 1986, 12:45153 (R;US)
TA-2 Water Boiler Reactor (Phase I) decommissioning: Resolving ground water interference during outdoor component removal and soil decontamination, 12:45126 (R;US)
Spatial Distribution
An aerial radiological survey of Areas 12, 15, 17 and 19, Nevada Test Site: Date of survey: October-November 1984, 12:45122 (R;US)
CESIUM CHLORIDES
Chemical Reactions
Thermodynamics of complexing in solutions of CsCl-CuCl/sub 2/-H/sub 2/O system at 25 deg C, 12:45907 (RA;SU;In Russian)
Complexes
Thermodynamics of complexing in solutions of CsCl-CuCl/sub 2/-H/sub 2/O system at 25 deg C, 12:45907 (RA;SU;In Russian)
Crystallization
Thermodynamics of complexing in solutions of CsCl-CuCl/sub 2/-H/sub 2/O system at 25 deg C, 12:45907 (RA;SU;In Russian)
Thermodynamic study of LiCl-CsCl-H_2O system, 12:45930 (RA;SU;In Russian)
CESIUM COMPOUNDS
See also CESIUM CHLORIDES
CESIUM FLUORIDES
Chemical Preparation
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)
Crystal Structure
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)
CESIUM FLUORIDES
Solution Heat
Enthalpies of dissolution and solvation of alkali metal fluorides in mixed solvent water-dimethylsulfoxide, 12:45929 (RA;SU;In Russian)
CHALCOPYRITE
Synthesis
1.5V-class Li/CuO battery, 12:45524 (R;JP)
CHALKS
See LIMESTONE

CHARCOAL
Sorptive Properties
Incineration of water pollutants with activated char from coal, wood, or crop residues in a system designed to produce energy and pyrolysis by-product chemicals. Final Technical completion report (Final), 12:46224 (R;US)
Weathering
Effects of weathering on impregnated charcoal removal efficiency for radioactive methyl iodide, 12:45491 (RA;JP)
CHARGE DENSITY
Transients
Inertial transient dynamics of the sliding charge density wave systems, 12:46732 (R;XA)
CHARGED PARTICLES
In addition to the specific charged particles listed below, see also the list under ELEMENTARY PARTICLES.
See also IONS
Hall Effect
Complex scattering dynamics and the integer quantum Hall effect, 12:46736 (R;US)
Scattering
Complex scattering dynamics and the integer quantum Hall effect, 12:46736 (R;US)
CHARGED-PARTICLE ACTIVATION
See ACTIVATION ANALYSIS CHARGED PARTICLES
CHARGED-PARTICLE TRANSPORT
I Codes
Applications of the ITS codes, 12:46707 (R;US)
CHARGED-PARTICLE TRANSPORT THEORY
A model for electron currents near a field null, 12:46845 (R;US)
CHARPAK CHAMBERS
See MULTIWIRE PROPORTIONAL CHAMBERS
CHARS
Activation Energy
Coal reactivity measurements, 12:44879 (R;US)
Chemical Composition
Development of mild gasification process: Quarterly report for the period April-June, 1987, 12:44844 (R;US)
Chemical Reaction Kinetics
Expansion of high-temperature: High-pressure data set for coal gasification: Quarterly report for the period December 28, 1986-March 28, 1987, 12:44840 (R;US)
Chemisorption
Chemisorption, reaction, and desorption studies of coal chars in steam, oxygen, and carbon dioxide. Annual report, January-December 1986, 12:44860 (R;US)
Combustion
Development of mild gasification process: Quarterly report for the period April-June, 1987, 12:44844 (R;US)
Gasification
Expansion of high-temperature: High-pressure data set for coal gasification: Quarterly report for the period December 28, 1986-March 28, 1987, 12:44840 (R;US)
Leaching
Results of leaching experiments conducted on samples from the Tono I UCG cavity, 12:44838 (R;US)
Oxidation
Chemisorption, reaction, and desorption studies of coal chars in steam, oxygen, and carbon dioxide. Annual report, January-December 1986, 12:44860 (R;US)
Porosity
Micropore diffusion in coal chars under reactive conditions: Quarterly technical progress report, 15 March 1987-15 June 1987, 12:44874 (R;US)
CHELATING AGENTS
See also ACETYLACETONE
Response Modifying Factors
Influence of certain chemical substances on the accumulation of radioactive silver and cobalt in rats, 12:46297 (RA;DD;In Russian)
CHEMICAL EFFLUENTS
Health Hazards
Risk assessment of toxic emissions: Alternative models and practices: Final report, 12:46307 (R;US)
CHEMICAL EXPLOSIONS
Atmospheric Explosions
Damage distant airblast from MINOR SCALE, 12:46145 (R;US)
Blast Effects
Blast testing of expedient shelters in model scale, 12:46146 (R;US)
Parametric Analysis
Large blast-wave simulators (lbs) with cold-gas drivers: computational design studies. Final report, 12:46143 (R;US)
CHEMICAL EXPLOSIVES
See also PETN
Detonations
A study of diverging detonation in high-explosive systems (Detonation in PBX-9502 main charge with two different booster materials; TATB and X-0407), 12:46148 (R;US)
Spectroscopic studies of shocked and detonating explosives, 12:46150 (R;US)
Emission Spectroscopy
Visible emission from granular explosives during shock initiation, 12:46151 (R;US)
Research Programs
Jet formation and characterization of a conical shaped charge, 12:46152 (R;US)
Sensitivity
A study of diverging detonation in high-explosive systems (Detonation in PBX-9502 main charge with two different booster materials; TATB and X-0407), 12:46148 (R;US)
Shock Waves
Visible emission from granular explosives during shock initiation, 12:46151 (R;US)
CHEMICAL FEEDSTOCKS
Waste Product Utilization
Use and disposal of end-products (Stabilisa) of spray dryer absorption process, 12:44920 (R;XU)
CHEMICAL INDUSTRY
Hazardous Materials
Health-hazard evaluation report HETA 84-186-1777, Sancap Abrasives, Inc., Alliance, Ohio, 12:46172 (R;US)
Health-hazard evaluation report HETA 84-449-1778, Agrico Chemical Company, Pierce, Florida, 12:46175 (R;US)
Industry-wide studies report of an in-depth survey at Denka Chemical Corporation, Houston, Texas, July 14-17, 1986, 12:46174 (R;US)
Industrywide studies report of an in-depth survey at E.I. duPont Denemours and Company, Sabine River Works, Orange, Texas, August 25-28, 1986, 12:46173 (R;US)
CHEMICAL MUTAGENS
See MUTAGENS
CHEMICAL REACTORS
See also RETORTS
Modifications
Mild gasification of coal, 12:44821 (R;US)
Optimization
Development of mild gasification process: Quarterly report for the period April-June, 1987 (Reactor diameter), 12:44844 (R;US)
Performance Testing
Development of mild gasification process: Quarterly report for the period April-June, 1987 (Reactor diameter), 12:44844 (R;US)
CHEMICAL VAPOR DEPOSITION
Technology Transfer
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
CHEMICAL WARFARE AGENTS
Personnel Monitoring
Chemical defense collective protection technology. Volume 2. Effects of airlock airflow pattern, clothing, and exposure concentration on vapor transport. Technical paper, 11-14 February 1985, 12:45967 (R;US)
Psychotropic Drugs
Annotated bibliography of psychomotor testing. Technical report, 12:46265 (R;US)

Vapors
Chemical defense collective protection technology. Volume 2. Effects of airlock airflow pattern, clothing, and exposure concentration on vapor transport. Technical paper, 11-14 February 1985, 12:45967 (R;US)

CHEMICAL WASTES
Combustion
Safety considerations for the operation of a thermal-destructor unit for Chemical Surety Materiel 3'x' items, 12:46052 (R;US)
Grouting
Long-term performance assessment of grouted phosphate/sulfate waste from N Reactor operations, 12:45132 (R;US)

CHEMICALS

Isotope and Nuclear Chemistry Division annual report FY 1986, October 1985-September 1986, 12:45957 (R;US)
Summaries of FY 1987 research in the chemical sciences, 12:45549 (R;US)

CHERENKOV COUNTERS
Design
Sudbury neutrino observatory, 12:46107 (RA;US)
Specifications
Sudbury neutrino observatory, 12:46107 (RA;US)

CHERENKOV DETECTORS
See CHERENKOV COUNTERS

CHERNOBYLSK-4 REACTOR
Information Dissemination
Chernobyl reactor accident. A documentation submitted by the Deutsche Welle radio station, 12:45555 (R;DE;In German)
Radiation Accidents
Environmental contamination related to the Chernobyl accident as measured in Israel during May-July 1986, 12:45486 (RA;IL)
Radiation fallout and assessment of radiation dose to the population of southern Israel following the Chernobyl accident, 12:45487 (RA;IL)
Reactor Accidents
Chernobyl reactor accident. A documentation submitted by the Deutsche Welle radio station, 12:45555 (R;DE;In German)
Environmental contamination related to the Chernobyl accident as measured in Israel during May-July 1986, 12:45486 (RA;IL)
Radiation fallout and assessment of radiation dose to the population of southern Israel following the Chernobyl accident, 12:45487 (RA;IL)
Transfrontier Contamination
Chernobyl reactor accident. A documentation submitted by the Deutsche Welle radio station, 12:45555 (R;DE;In German)
Consequences of the Chernobyl reactor accident for the Munich area, 12:46204 (R;DE;In German)

CHILDREN
Radiation Doses
Radiological survey in pediatric X-ray diagnostics, 12:46299 (RA;DD;In German)

CHINESE HAMSTER OVARY CELLS
See CHO CELLS

CHIRAL SYMMETRY
Symmetry Breaking
Studies of chiral symmetry in a spontaneously broken lattice gauge theory, 12:46623 (BA;US)

CHLORAL
Biochemical Reaction Kinetics
Stable reaction products of 3-methyl cytidine with chloroacetaldehyde and acetaldehyde, 12:46246 (J;US)

CHLOR-ALKALI INDUSTRY
See CHEMICAL INDUSTRY
CHLORINE
SODIUM CARBONATES

CHLORIDES

MANGANESE CHLORIDES
NIOBIUM CHLORIDES
SILICON CHLORIDES
SODIUM CHLORIDES
TANTALUM CHLORIDES
ZIRCONIUM CHLORIDES
Corrosive Effects
Chloride induced corrosion of stainless steels and aluminium in condensing boilers, 12:45725 (R;DK;In Danish)

CHLORINATED ALIPHATIC HYDROCARBONS
See also PVC
VINYL CHLORIDE
Health Hazards
Health risk assessment of tetrachloroethylene (PCE) in California drinking water, 12:46319 (R;US)

CHLORINATED AROMATIC HYDROCARBONS
Emission
Locating and estimating air emissions from sources of polychlorinated biphenyls (PCB), 12:46178 (R;US)
Pollution Sources
Locating and estimating air emissions from sources of polychlorinated biphenyls (PCB), 12:46178 (R;US)

CHLORINE
Atom-Molecule Collisions
Reactive scattering of electronically excited alkali atoms with molecules, 12:46427 (R;US)

CHLORINE CHLORIDES
See CHLORINE

CHLORINE IONS
Ion-Atom Collisions
Angular distributions of very low energy recoil ions, 12:46471 (J;NL)

CHO CELLS
Molecular Biology
Apparatus for direct counting of beta-rays from two-dimensional protein gels: measurement of changes in protein synthesis due to changes in density of Chinese hamster ovary cells, 12:45873 (J;US)
Sensitivity
Organization of amplified metallothionein (MT) genes in cadmium-resistant Chinese hamster cells, 12:46320 (J;US)

CHROMATOGRAPHY
See also SUPERCRITICAL FLUID CHROMATOGRAPHY
Application of continuous annular chromatography to size-exclusion separations, 12:45852 (R;US)

CHROMIUM
Emission Spectroscopy
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Environmental Transport
Kinetics and mechanisms of the release of trace inorganic contaminants to ground water from coal ash basins on the Savannah River Plant: Progress report, September 29, 1986-September 30, 1987, 12:46199 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)

CHROMIUM 52 TARGET
Pion Plus Reactions
Double charge exchange to the double isobaric analog state at T/sub π/—292 MeV, 12:46661 (J;US)

CHROMIUM ALLOYS
See also STAINLESS STEELS
Order-Disorder Transformations
Possible influence of order-disorder transformations on the swelling of 85Ni-15Cr nichrome alloy, 12:45756 (J;NL)

Physical Radiation Effects
Neutron irradiation of Fe-Mn, Fe-Cr-Mn and Fe-Cr-Ni alloys and an explanation of their differences in swelling behavior, 12:45757 (J;NL)
Neutron irradiation scoping study of twenty-five copper-base materials, 12:45751 (J;US)
Possible influence of order-disorder transformations on the swelling of 85Ni-15Cr nichrome alloy, 12:45756 (J;NL)
Swelling
Neutron irradiation of Fe-Mn, Fe-Cr-Mn and Fe-Cr-Ni alloys and an explanation of their differences in swelling behavior, 12:45757 (J;NL)
Possible influence of order-disorder transformations on the swelling of 85Ni-15Cr nichrome alloy, 12:45756 (J;NL)

CHROMIUM CARBIDES
Solid Lubricants
Experimental evaluation of chromium-carbide-based solid lubricant coatings for use to 760°C, 12:45697 (R;US)

CHROMIUM COMPLEXES
Sublimation Heat
Thermodynamic properties of aluminium, chromium, yttrium and zirconium acetylacetonates, 12:45916 (RA;SU;In Russian)
Supercritical Fluid Chromatography
Separation of metal-containing compounds by supercritical fluid chromatography, 12:45863 (J;US)

CHROMIUM COMPOUNDS
See also CHROMIUM CARBIDES
CHROMIUM OXIDES
Chemical Reactions
Evaluation of laser desorbed transition-metal ions as analytical chemical ionization reagents by pattern recognition, 12:45870 (J;US)
Dissolution
Methods for geochemical model evaluation, 12:45066 (RA;US)

CHROMIUM OXIDES
Erosion
Erosion of hard material coating systems, 12:45793 (BA;US)
Thermodynamic Properties
Erosion of hard material coating systems, 12:45793 (BA;US)
Wear Resistance
Erosion of hard material coating systems, 12:45793 (BA;US)

CHROMIUM-MOLYBDENUM STEELS
See also STEEL-15KH2MFA
Crack Propagation
Transients in elevated temperature crack growth (1 Cr-1Mo-0.25V), 12:45715 (R;US)

CHROMODYNAMICS
See QUANTUM CHROMODYNAMICS

CHROMOSOMES
Fractionation
Localization of an EGF receptor in purified chromosomes from A431 and lymphoblast cells, 12:46242 (J;US)
Hybridization
Localization of an EGF receptor in purified chromosomes from A431 and lymphoblast cells, 12:46242 (J;US)

CHRONIC RADIATION EFFECTS
See DELAYED RADIATION EFFECTS

CISTRONS
See GENES

CITIES
See URBAN AREAS

CLADDING
For the process only.
Stresses
Temperature limits for dry spent fuel storage, 12:45103 (RA;US)

CLASSICAL MECHANICS
Equations of Motion
Solutions of discrete mechanics near the continuum limit, 12:46840 (BA;US)

CLATHRATES
Carrier Lifetime
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Crystal Structure
Time-resolved x-ray scattering study of ordering kinetics in $SbCl_5$-intercalated graphite, 12:45837 (J;US)
Raman Spectra
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Reflectivity
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Sorptive Properties
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)

CLINTON P. ANDERSON MESON PHYSICS FACILIT
See LAMPF LINAC

CNG PROCESS
Equipment
CNG acid gas removal process: Final report, 12:44839 (R;US)
Research Programs
CNG acid gas removal process: Final report, 12:44839 (R;US)

CO2 FLOODING
See CARBON DIOXIDE INJECTION

COAL
See also BLACK COAL
SUBBITUMINOUS COAL
Activation Energy
Coal reactivity measurements, 12:44879 (R;US)
Alkylation
Linkages and aromatic clusters in a bituminous coal: Quarterly technical progress report No. 7 for the period March 1, 1987-May 31, 1987, 12:44873 (R;US)
Calibration Standards
Directions of research from the Argonne Premium Coal Sample Program, 12:44866 (R;US)
Chars
Micropore diffusion in coal chars under reactive conditions: Quarterly technical progress report, 15 March 1987-15 June 1987, 12:44874 (R;US)
Chemical Composition
Determination of trace elements in coal and coal products - part 5. Characterisation of a range of Australian raw coals, 12:44877 (R;AU)
Development of mild gasification process: Quarterly report for the period April-June, 1987, 12:44844 (R;US)
Electron-transfer reactions in coal model compounds. Annual report, January-December 1986, 12:44878 (R;US)
Chemical Reaction Kinetics
Weathering effects on structure and reactivity of US coals: Third quarterly report, 12:44870 (R;US)
Chemical Reactions
Electron-transfer reactions in coal model compounds. Annual report, January-December 1986, 12:44878 (R;US)
Classification
Applied coal and coke petrography in ACIRL, 12:44865 (R;AU)
Coking
Chemical and physical valorization of coal, 12:44857 (R;XE;In German)
Combustion
Advanced coal-fueled combustor for residential space heating applications: Topical report: Combustor design definition for the period 1 October 1986-30 April 1987, 12:44955 (R;US)
Coal-fueled boilers with a travelling-grate stoker, 12:46044 (R;DK;In Danish)
Detailed model for practical pulverized coal furnaces and gasifiers: Quarterly technical progress report No. 7 for the period 1 May 1987 to 31 July 1987: Ninth quarterly reporting period, 12:44954 (R;US)
Development of mild gasification process: Quarterly report for the period April-June, 1987, 12:44844 (R;US)
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Combustion Kinetics
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly report No. 8, 12:45961 (R;US)
Comminution
Development and testing of optimum comminution processes and equipment for the preparation of coal in a form adapted to new technologies, 12:44817 (R;XE;In German)

Investigation of the grinding process in an EVT mill - development of a process model, 12:44819 (R;AU)

Consumption Rates
Realizing coal's potential, 12:45574 (RA;US)
Supporting analysis for world energy outlook (Forecasting to 1995; EIA OMS models; global aspects), 12:45564 (RA;US)
World energy outlook: Economic and security implications, 12:45571 (RA;US)

Corrosive Effects
Turbine disposition, erosion and corrosion evaluations using a simplified test approach, 12:45315 (B;US)

Depolymerization
Linkages and aromatic clusters in a bituminous coal: Quarterly technical progress report No. 7 for the period March 1, 1987-May 31, 1987, 12:44873 (R;US)

Desulfurization
Cooperative research in coal liquefaction infratechnology and generic technology development: Quarterly report, April 1, 1987-July 1, 1987, 12:44852 (R;US)
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)

Dilatometry
The macromolecular chemistry of coalification: Quarterly report for the period May 1, 1987-July 31, 1987, 12:44869 (R;US)

Electron Spin Resonance
ESR studies of charge-transfer in coal-derived liquids, 12:45877 (BA;US)

Explosive Fracturing
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44315 (R;US)

Exports
Summary of coal export project, 12:44962 (R;US)

Fluidized-Bed Combustion
Fluidized-bed combustion development: Volume 1, Industrial steam generation: Final report, 12:44949 (R;US)
Reduction of sulphur and nitrogen oxide emissions from fluidized bed boilers by control of combustion conditions, 12:44911 (R;XU)
State and prospects of fluidized bed combustion in the Federal Republic of Germany, 12:44960 (R;XU)

Fractionation
Linkages and aromatic clusters in a bituminous coal: Quarterly technical progress report No. 7 for the period March 1, 1987-May 31, 1987, 12:44873 (R;US)

Government Policies
Realizing coal's potential: A chapter from energy security: A report to the President of the United States, 12:45583 (R;US)

Heat Treatments
Steam conditioning of coal for synfuels production: First quarterly report, January 1 to March 31, 1987, 12:44843 (R;US)

Hydrocracking
Chemical and physical valorization of coal, 12:44857 (R;XE;In German)

Hydrogenation
Chemical and physical valorization of coal, 12:44857 (R;XE;In German)
Clean carbon and hydrogen fuels from coal and other carbonaceous raw materials (HYDROCARB process), 12:45186 (R;US)
Environmental aspects of coal liquefaction and heavy oil upgrading, 12:44864 (R;XU)
Vapor and liquid phase hydrotreatment of hydropyrolysis tar with hydrous titanium oxide catalysts, 12:44862 (R;US)

Market
Realizing coal's potential, 12:45574 (RA;US)

Mass Spectroscopy
Linkages and aromatic clusters in a bituminous coal: Quarterly technical progress report No. 7 for the period March 1, 1987-May 31, 1987, 12:44873 (R;US)

Materials Testing
Study of long-term fouling behaviour of low rank coals, 12:44958 (R;AU)

Methylation
Structural information from the selective methylation of acidic O-H and C-H sites in coal, 12:44867 (R;US)

Molecular Structure
The macromolecular chemistry of coalification: Quarterly report for the period May 1, 1987-July 31, 1987, 12:44869 (R;US)

Nuclear Magnetic Resonance
Structural information from the selective methylation of acidic O-H and C-H sites in coal, 12:44867 (R;US)

Oxidation
Chemical and physical valorization of coal, 12:44857 (R;XE;In German)

Petrography
Applied coal and coke petrography in ACIRL, 12:44865 (R;AU)
Chemical and physical valorization of coal, 12:44857 (R;XE;In German)

Phase Transformations
The macromolecular chemistry of coalification: Quarterly report for the period May 1, 1987-July 31, 1987, 12:44869 (R;US)

Physical Properties
Gasification of bituminous coal, 12:44830 (RA;US)

Pneumatic Transport
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)

Prices
Coal markets and utilities' compliance decisions: Final report, 12:44963 (R;US)
World energy outlook: Economic and security implications, 12:45571 (RA;US)

Processing
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
Cooperative research in coal liquefaction infratechnology and generic technology development: Quarterly report, April 1, 1987-July 1, 1987, 12:44852 (R;US)

Production
Realizing coal's potential, 12:45574 (RA;US)
Supporting analysis for US energy outlook (Forecasting to 1995), 12:45565 (RA;US)

Pyrolysis
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
Expansion of high-temperature: High-pressure data set for coal gasification: Quarterly report for the period December 28, 1986-March 28, 1987, 12:44840 (R;US)
The macromolecular chemistry of coalification: Quarterly report for the period May 1, 1987-July 31, 1987, 12:44869 (R;US)
Vapor and liquid phase hydrotreatment of hydropyrolysis tar with hydrous titanium oxide catalysts, 12:44862 (R;US)
Weathering effects on structure and reactivity of US coals: Third quarterly report, 12:44870 (R;US)

Research Programs
Chemical and physical valorization of coal, 12:44857 (R;XE;In German)

Solvent Extraction
Linkages and aromatic clusters in a bituminous coal: Quarterly technical progress report No. 7 for the period March 1, 1987-May 31, 1987, 12:44873 (R;US)

Staged Combustion
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Reduction of sulphur and nitrogen oxide emissions from fluidized bed boilers by control of combustion conditions, 12:44911 (R;XU)

Structural Chemical Analysis
Structural information from the selective methylation of acidic O-H and C-H sites in coal, 12:44867 (R;US)

Sulfur Content
Coal markets and utilities' compliance decisions: Final report, 12:44963 (R;US)
Supercritical Gas Extraction
Identification of nonvolatile coal derived products via chromatography coupled with on-line FTIR detection: Quarterly progress report for the period September 1, 1986-November 30, 1986, 12:44848 (R;US)
Intermediates formed during supercritical desulfurization of coal: Sixteenth quarterly technical progress report, April 1, 1987 to June 30, 1987, 12:44847 (R;US)
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)
Supply and Demand
Realizing coal's potential, 12:45574 (RA;US)
Swelling
Gasification of bituminous coal, 12:44830 (RA;US)
Thermal Gravimetric Analysis
Weathering effects on structure and reactivity of US coals: Third quarterly report, 12:44870 (R;US)
Transport
Realizing coal's potential, 12:45574 (RA;US)
Weathering
Weathering effects on structure and reactivity of US coals: Third quarterly report, 12:44870 (R;US)

COAL DEPOSITS
See also COAL SEAMS
Comparative Evaluations
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
Exploration
Conversion of borehole Stoneley waves to channel waves in coal, 12:44933 (R;US)
Leasing
Realizing coal's potential, 12:45574 (RA;US)
Maps
Realizing coal's potential, 12:45574 (RA;US)

COAL FINES
Combustion
Combustion of coal/water mixtures with thermal preconditioning, 12:45319 (B;US)
Combustion Properties
Combustion and deposition in coal-fired turbines, 12:45317 (B;US)
Deposition
Combustion and deposition in coal-fired turbines, 12:45317 (B;US)
Hydraulic Transport
Combustion and deposition in coal-fired turbines, 12:45317 (B;US)
Combustion of coal/water mixtures with thermal preconditioning, 12:45319 (B;US)
Development of a high pressure dry coal feed system for a two-stage slagging gas turbine combustor, 12:45320 (B;US)
Superheating
Combustion of coal/water mixtures with thermal preconditioning, 12:45319 (B;US)
Water Removal
Membrane pressure plate filtration, 12:44816 (R;XE)

COAL GAS
Chemical Analysis
Effect of pressure on subbituminous coal gasification, 12:44829 (RA;US)
Gasification of bituminous coal, 12:44830 (RA;US)

COAL GASIFICATION
Electron-transfer reactions in coal model compounds. Annual report, January-December 1986, 12:44878 (R;US)
Catalysts
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
Chemical Reaction Kinetics
Vaporization and condensation of alkali species in coal gasification streams, 12:44826 (R;JP;In Japanese)
Chemical Reactions
Chemisorption, reaction, and desorption studies of coal chars in steam, oxygen, and carbon dioxide. Annual report, January-December 1986, 12:44860 (R;US)
Chemical Reactors
Development of mild gasification process: Quarterly report for the period April-June, 1987, 12:44844 (R;US)
Injection of densely loaded flows into entrained-flow gasifiers: Seventh quarterly report, April 1, 1987-June 30, 1987, 12:44842 (R;US)
Injection of densely loaded flows into entrained-flow gasifiers: Sixth quarterly report, January 1, 1987-March 31, 1987, 12:44841 (R;US)
Mild gasification of coal, 12:44821 (R;US)
Chemistry
Mild gasification of coal, 12:44821 (R;US)
Desorption
Chemisorption, reaction, and desorption studies of coal chars in steam, oxygen, and carbon dioxide. Annual report, January-December 1986, 12:44860 (R;US)
Evaluation
Fuel treatment, 12:44910 (R;XU)
Fuel Feeding Systems
Injection of densely loaded flows into entrained-flow gasifiers: Seventh quarterly report, April 1, 1987-June 30, 1987, 12:44842 (R;US)
Injection of densely loaded flows into entrained-flow gasifiers: Sixth quarterly report, January 1, 1987-March 31, 1987, 12:44841 (R;US)
Mathematical Models
Vaporization and condensation of alkali species in coal gasification streams, 12:44826 (R;JP;In Japanese)
Optimization
Development of mild gasification process: Quarterly report for the period April-June, 1987, 12:44844 (R;US)
Oxygen Enrichment
Survey of the advanced gas separation membrane technology and its possible applications to electric power industry, 12:44824 (R;JP;In Japanese)
Solvents
Regeneration of refrigerated methanol in conditioning gases from coal. Final report, June 1984-October 1985, 12:44861 (R;US)
Technology Assessment
Elimination of SO_2 and reduction of NO/sub x/ formation through choice of appropriate fuel conversion and connected desulphurization, 12:45321 (R;XU)
Waste Processing
Regeneration of refrigerated methanol in conditioning gases from coal. Final report, June 1984-October 1985, 12:44861 (R;US)
Yields
Mild gasification of coal, 12:44821 (R;US)
Steam conditioning of coal for synfuels production: First quarterly report, January 1 to March 31, 1987, 12:44843 (R;US)

COAL GASIFICATION PLANTS
Materials
Advanced Research and Technology Development Fossil Energy Materials Program, 12:45712 (R;US)
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
Materials Testing
Advanced Research and Technology Development Fossil Energy Materials Program, 12:45712 (R;US)
Mathematical Models
Detailed model for practical pulverized coal furnaces and gasifiers: Quarterly technical progress report No. 7 for the period 1 May 1987 to 31 July 1987: Ninth quarterly reporting period, 12:44954 (R;US)

COAL INDUSTRY
Competition
US hard coal mining - a study with special regard to the terms of delivery valid for industrial coal exports to the Federal Republic of Germany, 12:45585 (R;DE;In German)

Economics
Realizing coal's potential, 12:45574 (RA;US)
Economy
Realizing coal's potential: A chapter from energy security: A report to the President of the United States, 12:45583 (R;US)
Investment
Realizing coal's potential, 12:45574 (RA;US)

COAL LIQUEFACTION
Catalysts
Catalytic methods for improved coal liquefaction and hydrotreating: Quarterly report No. 7 for the period March 23, 1987 through June 22, 1987, 12:44851 (R;US)
Control of catalyst deactivation with ammonia: Quarterly report for period June 1, 1987 to August 31, 1987, 12:44850 (R;US)
Cooperative research in coal liquefaction infratechnology and generic technology development: Quarterly report, April 1, 1987-July 1, 1987, 12:44852 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 April-30 June 1985, 12:44846 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January 1985-31 March 1985, 12:44845 (R;US)
Correlations
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
Cost
Transportation fuels and engines for optimum energy utilization: An assessment of energy consumption from resources through end use: Final report, Volume 1, 12:45707 (R;US)
Evaluation
Fuel treatment, 12:44910 (R;XU)
Research Programs
CEC sub-programme of R & D on new energy vectors, 12:44856 (R;XE)
Chemical and physical valorization of coal, 12:44857 (R;XE;In German)

COAL LIQUEFACTION PLANTS
Environmental Impacts
Environmental aspects of coal liquefaction and heavy oil upgrading, 12:44864 (R;XU)
Materials
Advanced Research and Technology Development Fossil Energy Materials Program, 12:45712 (R;US)
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
Materials Testing
Advanced Research and Technology Development Fossil Energy Materials Program, 12:45712 (R;US)

COAL LIQUIDS
Boiling Points
Polarizability of coal liquefaction product distillates, 12:44881 (J;GB)
Distillates
Polarizability of coal liquefaction product distillates, 12:44881 (J;GB)
Electron Spin Resonance
ESR studies of charge-transfer in coal-derived liquids, 12:45877 (BA;US)
Hydrogenation
Catalytic methods for improved coal liquefaction and hydrotreating: Quarterly report No. 7 for the period March 23, 1987 through June 22, 1987, 12:44851 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January 1985-31 March 1985, 12:44845 (R;US)
Intermolecular Forces
Polarizability of coal liquefaction product distillates, 12:44881 (J;GB)
Molecular Weight
Low-voltage, high-resolution mass spectrometric methods for fuel analysis: application to coal distillates, 12:44880 (J;US)
Multi-Element Analysis
Low-voltage, high-resolution mass spectrometric methods for fuel analysis: application to coal distillates, 12:44880 (J;US)
Polarizability
Polarizability of coal liquefaction product distillates, 12:44881 (J;GB)
Refining
Preparation and optimisation of coal hydrotreating catalysts, 12:44858 (R;AU)
Supercritical Fluid Chromatography
Identification of nonvolatile coal derived products via chromatography coupled with on-line FTIR detection: Quarterly progress report for the period September 1, 1986-November 30, 1986, 12:44848 (R;US)
Thermodynamic Properties
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
Phase equilibrium data for development of correlations for coal fluids: Report period, February 1, 1987 to August 15, 1987, 12:44854 (R;US)
Van der Waals Forces
Polarizability of coal liquefaction product distillates, 12:44881 (J;GB)

COAL MINERS
Injuries
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1984, 12:44966 (R;US)
Training
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1984, 12:44966 (R;US)

COAL MINES
Accidents
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1984, 12:44966 (R;US)
Inspection
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1984, 12:44966 (R;US)

COAL PREPARATION
Evaluation
Fuel treatment, 12:44910 (R;XU)

COAL PREPARATION PLANTS
Materials
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
Performance Testing
Preparation and injection of coal-water mixtures into a blast furnace, 12:44818 (R;XE)

COAL RANK
Computer Calculations
Computer program to calculate the rank of a coal, 12:44876 (R;CA)
Computer Codes
Computer program to calculate the rank of a coal, 12:44876 (R;CA)

COAL SEAMS
Classification
Simplistic classification of Western Canadian coal seams with respect to their potential for development as underground mines, 12:44943 (R;CA)
Degassing
Mine gas as feed for a PSA-unit producing substitute natural gas resp. enriched methane. Final report, 12:44820 (R;DE;In German)
Geologic Faults
Conversion of borehole Stoneley waves to channel waves in coal, 12:44933 (R;US)
Sampling
Directions of research from the Argonne Premium Coal Sample Program, 12:44866 (R;US)

COAL TAR
Catalytic Cracking
Vapor and liquid phase hydrotreatment of hydropyrolysis tar with hydrous titanium oxide catalysts, 12:44862 (R;US)
Chemical Analysis
Enhanced recovery of pyrolysis products, 12:44837 (RA;US)
Comparative Evaluations
Enhanced recovery of pyrolysis products, 12:44837 (RA;US)
COAL-DERIVED LIQUIDS
See COAL LIQUIDS
COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Air Pollution Control
Combustion of coal/water mixtures with thermal preconditioning, 12:45319 (B;US)
Combustion Control
Combustion and deposition in coal-fired turbines, 12:45317 (B;US)
Combustion of coal/water mixtures with thermal preconditioning, 12:45319 (B;US)
Combustion Kinetics
Direct coal-fueled combustion turbines, 12:45318 (B;US)
Combustors
Development of coal-fueled gas turbine systems for electric utility application, 12:45316 (B;US)
Development of a high pressure dry coal feed system for a two-stage slagging gas turbine combustor, 12:45320 (B;US)
Corrosion
Turbine disposition, erosion and corrosion evaluations using a simplified test approach, 12:45315 (B;US)
Deposits
Combustion and deposition in coal-fired turbines, 12:45317 (B;US)
Design
Development of coal-fueled gas turbine systems for electric utility application, 12:45316 (B;US)
Emission
Direct coal-fueled combustion turbines, 12:45318 (B;US)
Erosion
Turbine disposition, erosion and corrosion evaluations using a simplified test approach, 12:45315 (B;US)
Fuel Systems
Development of a high pressure dry coal feed system for a two-stage slagging gas turbine combustor, 12:45320 (B;US)
Planning
Development of coal-fueled gas turbine systems for electric utility application, 12:45316 (B;US)
Service Life
Direct coal-fueled combustion turbines, 12:45318 (B;US)
Testing
Turbine disposition, erosion and corrosion evaluations using a simplified test approach, 12:45315 (B;US)
COAL-OIL MIXTURES

COBALT
Catalytic Effects
Catalytic methods for improved coal liquefaction and hydrotreating: Quarterly report No. 7 for the period March 23, 1987 through June 22, 1987, 12:44851 (R;US)
COBALT 58
Biological Localization
Influence of certain chemical substances on the accumulation of radioactive silver and cobalt in rats, 12:46297 (RA;DD;In Russian)
COBALT 60
Biological Localization
Influence of certain chemical substances on the accumulation of radioactive silver and cobalt in rats, 12:46297 (RA;DD;In Russian)
Radioecological Concentration
An aerial radiological survey of the White Oak Creek Floodplain, Oak Ridge Reservation, Oak Ridge, Tennessee: Date of survey: September-October 1986, 12:45151 (R;US)
An aerial radiological survey of Areas 12, 15, 17 and 19, Nevada Test Site: Date of survey: October-November 1984, 12:45122 (R;US)
Spatial Distribution
An aerial radiological survey of Areas 12, 15, 17 and 19, Nevada Test Site: Date of survey: October-November 1984, 12:45122 (R;US)
COBALT ALLOYS
Phase Studies
Formation of metastable structures and amorphous phases in Pu-based systems using the triode sputtering technique, 12:45739 (R;US)
COBALT CHLORIDES
Chromatography
Application of continuous annular chromatography to size-exclusion separations, 12:45852 (R;US)
COBALT COMPLEXES
Supercritical Fluid Chromatography
Separation of metal-containing compounds by supercritical fluid chromatography, 12:45863 (J;US)
COBALT COMPOUNDS
See also COBALT CHLORIDES
Chemical Reactions
Evaluation of laser desorbed transition-metal ions as analytical chemical ionization reagents by pattern recognition, 12:45870 (J;US)
COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Boilers
Problems in the application of gas turbines for co-generation, 12:45680 (RA;GB)
Design
Problems in the application of gas turbines for co-generation, 12:45680 (RA;GB)
Economic Analysis
Grid-interconnection performance requirements and current practice baseline assessment. Topical report, September 1985-April 1986, 12:45560 (R;US)
Energy Policy
Incentives for combined production of heat and power in some countries, 12:45559 (R;FI;In Finnish)
Gas Turbines
Problems in the application of gas turbines for co-generation, 12:45680 (RA;GB)
Interconnected Power Systems
Grid-interconnection performance requirements and current practice baseline assessment. Topical report, September 1985-April 1986, 12:45560 (R;US)
Tax Credits

IN-SITU COMBUSTION
Additives
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
Diagnostic Techniques
Laser-enhanced flame ionization detector, 12:45867 (J;US)
Mathematical Models
Detailed model for practical pulverized coal furnaces and gasifiers: Quarterly technical progress report No. 7 for the period 1 May 1987 to 31 July 1987: Ninth quarterly reporting period, 12:44954 (R;US)
Integrated approach to spray-combustion model development. Report for October 1985-October 1986, 12:45959 (R;US)
Measuring Instruments
Combustion control with smart sensors: Final report for period February 1, 1982-November 30, 1986, 12:45964 (R;US)
COMBUSTION CHAMBERS
Liquid Fuels
Transient spray-combustion computations. Report for October 1985-October 1986, 12:45960 (R;US)
Stokers
Coal-fueled boilers with a travelling-grate stoker, 12:46044 (R;DK;In Danish)
COMBUSTION CONTROL
Combustion control with smart sensors: Final report for period February 1, 1982-November 30, 1986, 12:45964 (R;US)
COMBUSTION KINETICS
Computer Calculations
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly report No. 8, 12:45961 (R;US)
COMBUSTION PRODUCTS
Investigations on the influence of combustion products on the retention of radioiodine by activated carbons, 12:45422 (R;DE;In German)
Aldehydes
Volatile organic hydrocarbon and aldehyde composition in Raleigh, North Carolina during the 1985 woodsmoke study, 12:46177 (R;US)
Chemical Analysis
PIC (products of incomplete combustion) analysis methods. Final report, March 1984-April 1985, 12:45684 (R;US)
Hazardous Materials
Evaluation of combustion processes for destruction of organic wastes - General Portland. Air pollution test report, 12:45683 (R;US)
PIC (products of incomplete combustion) analysis methods. Final report, March 1984-April 1985, 12:45684 (R;US)
Organic Compounds
Volatile organic hydrocarbon and aldehyde composition in Raleigh, North Carolina during the 1985 woodsmoke study, 12:46177 (R;US)
COMBUSTION WAVES
Computerized Simulation
Postburn evaluation of the Hanna Iva and B UCG experiments, Wyoming, 12:44832 (RA;US)
Mathematical Models
Postburn evaluation of the Hanna Iva and B UCG experiments, Wyoming, 12:44832 (RA;US)
COMBUSTORS
See also FLUIDIZED-BED COMBUSTORS
Design
Advanced coal-fueled combustor for residential space heating applications: Topical report: Combustor design definition for the period 1 October 1986-30 April 1987, 12:44955 (R;US)
Development of a high pressure dry coal feed system for a two-stage slagging gas turbine combustor, 12:45320 (B;US)
Refuse derived fuel combustion trials on a single chain grate stoker shell boiler, 12:45210 (R;GB)
Emission
Development of a high pressure dry coal feed system for a two-stage slagging gas turbine combustor, 12:45320 (B;US)
Mathematical Models
Detailed model for practical pulverized coal furnaces and gasifiers: Quarterly technical progress report No. 7 for the period 1 May 1987 to 31 July 1987: Ninth quarterly reporting period, 12:44954 (R;US)
Performance Testing
Refuse derived fuel combustion trials on a single chain grate stoker shell boiler, 12:45210 (R;GB)
Specifications
Advanced coal-fueled combustor for residential space heating applications: Topical report: Combustor design definition for the period 1 October 1986-30 April 1987, 12:44955 (R;US)
COMETS
See also HALLEY COMET
Emission Spectra
Comparison of the high resolution IUE observations of CS emission in Comets Halley and Giacobini-Zinner, 12:46362 (RA;FR)
COMMERCIAL BUILDINGS
Air Conditioning
Bottom line for commercial heat pump sales, 12:45634 (RA;US)
Closed-loop water-source heat pump systems, 12:45636 (RA;US)

Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS). Volume 1. Executive summary. Final report, 9 January 1984-18 February 1986, 12:44973 (R;US)
Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS). Volume 2. Technical report. Final report, 9 January 1984-18 February 1986, 12:44974 (R;US)

Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS). Volume 3. Appendices. Final report, 9 January 1984-18 February 1986, 12:44975 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise, 12:44968 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise. Volume 1. Executive summary. Final report, September 1983-May 1987, 12:44969 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise. Volume 2. Technical presentation. Final report, September 1983-May 1987, 12:44970 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise. Volume 3. Appendix. Final report, September 1983-May 1987, 12:44971 (R;US)

Sediments
Erosion, deposition, faulting, and instability of shelf sediments: eastern Gulf of Alaska. Section 3. The taxonomy, ecology, and zoogeography of the Holocene and Pleistocene ostracode fauna of the Gulf of Alaska. Final report, 12:45001 (R;US)
Outer Continental Shelf environmental assessment program. Final reports of principal investigators. Volume 47, 12:45000 (R;US)
Source, composition, and flux of organic detritus in lower Cook Inlet. Final report, 12:44998 (R;US)

CONTINUOUS MINERS
Computerized Simulation
Development of a computer model of a continuous digging machine Easi-Miner at Obed Mountain mine, 12:44942 (R;CA)

CONTROL EQUIPMENT
Maintenance
Lifetime and need for renovation of HVAC-control equipment. The determination of economic-technical lifetime and need for renovation of existing control equipment of HVAC-processes, 12:45652 (R;FI;In Finnish)

CONTROL ROD DRIVES
Remote Handling Equipment
Improved control rod drive handling equipment for BWRs [boiling-water reactors]: Final report, 12:45396 (R;US)

CONVECTION
Entropy
Entropy generation in convective heat transfer and isothermal convective mass transfer, 12:46017 (J;US)

COOK INLET
See GULF OF ALASKA

COOLERS
See HEAT EXCHANGERS

COOLING TOWERS
Waste Product Utilization
Wastewater reuse as cooling-tower makeup: Final report, 12:45685 (R;US)

COPOLYMERS
Morphology
Applications and limitations of deuterium labeling methods to neutron scattering studies of polymers, 12:45806 (R;US)

COPPER
Bonding
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Elasticity
Elastic moduli of copper under compression, 12:45728 (R;US)
Electric Conductivity
Effects of neutron irradiation to 63 dpa on the properties of various commercial copper alloys, 12:46912 (R;US)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Grain Size
Nanocrystalline metals and semiconductors studied by positron lifetime, 12:46760 (RA;DD)
Physical Radiation Effects
Effects of neutron irradiation to 63 dpa on the properties of various commercial copper alloys, 12:46912 (R;US)
Neutron irradiation scoping study of twenty-five copper-base materials, 12:45751 (J;US)
Structural Chemical Analysis
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Vacancies
Migration stage of divacancies in quenched pure aluminium, dilute aluminium alloys, and pure copper studied by positron annihilation, 12:46756 (RA;DD)
Wear
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)

COPPER 65 TARGET
Scandium 45 Reactions
Studies of complex fragment emission in heavy ion reactions: Progress report, September 1, 1986 through August 31, 1987, 12:46645 (R;US)

COPPER ALLOYS
See also COPPER BASE ALLOYS
Bonding
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Electric Conductivity
Effects of neutron irradiation to 63 dpa on the properties of various commercial copper alloys, 12:46912 (R;US)
Electronic Specific Heat
Ce(Cu/sub 0.9/Ag/sub 0.1/)$_6$: Highest electronic specific-heat coefficient of the heavy-fermion systems, 12:45750 (J;US)
Electronic Structure
Positron-annihilation study of the electronic structure of Cu/sub 91/Ge$_9$, 12:45753 (J;US)
Kondo Effect
Ce(Cu/sub 0.9/Ag/sub 0.1/)$_6$: Highest electronic specific-heat coefficient of the heavy-fermion systems, 12:45750 (J;US)
Magnetic Susceptibility
Ce(Cu/sub 0.9/Ag/sub 0.1/)$_6$: Highest electronic specific-heat coefficient of the heavy-fermion systems, 12:45750 (J;US)
Phase Studies
Kinetics of phase separation in Mn/sub 0.67/Cu/sub 0.33/, 12:45752 (J;US)
Physical Radiation Effects
Effects of neutron irradiation to 63 dpa on the properties of various commercial copper alloys, 12:46912 (R;US)
Structural Chemical Analysis
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)
Wear
The influence of stacking fault energy and adhesion on the wear of Cu and Al - bronze, 12:45762 (BA;US)

COPPER BASE ALLOYS
See also BRONZE
Phase Diagrams
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
Physical Radiation Effects
Neutron irradiation scoping study of twenty-five copper-base materials, 12:45751 (J;US)
Precipitation
Positron annihilation study of precipitation effects in CuIn and CuSb alloys, 12:46762 (RA;DD)

COPPER CHLORIDES
Chemical Reactions
Thermodynamics of complexing in solutions of CsCl-CuCl/sub 2/-H/sub 2/O system at 25 deg C, 12:45907 (RA;SU;In Russian)
Complexes
Thermodynamics of complexing in solutions of CsCl-CuCl/sub 2/-H/sub 2/O system at 25 deg C, 12:45907 (RA;SU;In Russian)

COPPER COMPLEXES
Supercritical Fluid Chromatography
Separation of metal-containing compounds by supercritical fluid chromatography, 12:45863 (J;US)
COPPER COMPOUNDS
See also COPPER OXIDES
COPPER SULFATES
COPPER SULFIDES
Isotopic Exchange
Observation of an oxygen isotope shift in the superconducting transition temperature of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45787 (J;US)
Transition Temperature
Observation of an oxygen isotope shift in the superconducting transition temperature of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45787 (J;US)
COPPER ISOTOPES
Isotope Effects
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
COPPER OXIDES
Absorption Spectra
Soft x-ray absorption studies on high-T/sub c/ superconducting oxides, 12:45782 (J;US)
Absorption Spectroscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Atom Transport
Oxygen-vacancy behavior in La/sub 2-//sub x/Sr/sub x/CuO/sub 4-//sub y/ by positron annihilation and oxygen diffusion, 12:45778 (J;US)
Coatings
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa_2Cu_3O/sub 6.9/, 12:45773 (J;US)
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Critical Current
Superconducting properties of aligned crystalline grains of $Y_1Ba_2Cu_3O$/sub 7-//sub δ/, 12:45785 (J;US)
Critical Field
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Crystal-Phase Transformations
Oxygen ordering and the orthorhombic-to-tetragonal phase transition in YBa_2Cu_3O/sub 7-//sub x/, 12:45776 (J;US)
Current Density
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Electric Conductivity
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Electron Collisions
Inverse photoemission studies of the empty electronic states and surface stability of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45780 (J;US)
Electron Spectroscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Electron-Electron Coupling
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Electronic Structure
Inverse photoemission studies of the empty electronic states and surface stability of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45780 (J;US)
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Unoccupied electronic states and surface phenomena for YBa_2Cu_3O/sub 6.9/, 12:45777 (J;US)
Grain Orientation
Superconducting properties of aligned crystalline grains of $Y_1Ba_2Cu_3O$/sub 7-//sub δ/, 12:45785 (J;US)
Hall Effect
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Interfaces
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa_2Cu_3O/sub 6.9/, 12:45773 (J;US)
Isotope Effects
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
Observation of an oxygen isotope effect in $YBa_2Cu_3O_7$, 12:45775 (J;US)
Magnetic Susceptibility
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Magnetization
Large anisotropic critical magnetization currents in single-crystal YBa_2Cu_3O/sub 7-//sub δ/, 12:45784 (J;US)
Microstructure
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Microstructure and properties of YBa_2Cu_3O/sub 9-//sub δ/ superconductors with transitions at 90 and near 290 K, 12:45774 (J;US)
Mixing
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa_2Cu_3O/sub 6.9/, 12:45773 (J;US)
Optical Microscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Order-Disorder Transformations
Oxygen ordering and the orthorhombic-to-tetragonal phase transition in YBa_2Cu_3O/sub 7-//sub x/, 12:45776 (J;US)
Passivation
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Photoelectron Spectroscopy
Oxygen withdrawal, copper valency, and interface reaction for Fe/La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45781 (J;US)
Photoemission
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Photon Emission
Inverse photoemission studies of the empty electronic states and surface stability of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45780 (J;US)
Scanning Electron Microscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Sorptive Properties
Oxygen withdrawal, copper valency, and interface reaction for Fe/La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45781 (J;US)
Superconductivity
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
Electrical properties of high T/sub c/ superconductors under high pressures (LaBaCuO, LaSrCuO, YBaCuO), 12:45813 (R;US)
Magnetic studies of high T/sub c/ superconducting (La/sub 0.9/Sr/sub 0.1/)$_2CuO$/sub 4-y/, 12:45789 (J;US)
Microstructure and properties of YBa_2Cu_3O/sub 9-//sub δ/ superconductors with transitions at 90 and near 290 K, 12:45774 (J;US)
Observation of an oxygen isotope effect in $YBa_2Cu_3O_7$, 12:45775 (J;US)
Soft x-ray absorption studies on high-T/sub c/ superconducting oxides, 12:45782 (J;US)
Superconducting properties of aligned crystalline grains of $Y_1Ba_2Cu_3O$/sub 7-//sub δ/, 12:45785 (J;US)
Thermodynamic Properties
Thermodynamic properties of Ln-Cu-O (Ln = La, Pr, Nd, Sm, Eu) systems, 12:45769 (RA;SU;In Russian)

Thermoelectric Properties
Normal-state properties of ABa2Cu3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Transition Temperature
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Vacancies
Oxygen-vacancy behavior in La/sub 2-//sub x/Sr/sub x/CuO/sub 4-//sub y/ by positron annihilation and oxygen diffusion, 12:45778 (J;US)
X-Ray Diffraction
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)

COPPER SELENIDE SOLAR CELLS
Research Programs
$CuInSe_2$ solar cell research by sputter deposition: Annual subcontract report, 1 January 1986-31 December 1986, 12:45246 (R;US)

COPPER SULFATES
Absorption Spectroscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Electron Spectroscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Optical Microscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Scanning Electron Microscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
X-Ray Diffraction
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)

COPPER SULFIDES

CORIUM
Fluid-Structure Interactions
Aerosol decontamination factors in pools overlying molten core-concrete - code modeling, 12:45471 (RA;US)
Application of the core-concrete interaction code WECHSL to reactor case, 12:45472 (RA;US)
BETA experimental results on melt/concrete interaction: silicate concrete behavior, 12:45454 (RA;US)
BETA experimental results on melt/concrete interaction: limestone concrete behavior, 12:45455 (RA;US)
Chemical phenomena and fission product behavior during core debris/concrete interactions, 12:45468 (RA;US)
CORCON-VANESA sensitivity study for Mark I BWR design, 12:45477 (RA;US)
Effect of plant design on aerosol release from corium-concrete interaction, 12:45475 (RA;US)
Effects of lateral separation of oxidic and metallic core debris on the BWR MK I containment drywell floor, 12:45478 (RA;US)
EPRI/ANL investigations of MCCI phenomena and aerosol release, 12:45462 (RA;US)
Ex-vessel fission product release modeling within integrated accident analysis, 12:45469 (RA;US)
Experimental study of pool entrainment and mixing between two immiscible liquids with gas injection, 12:45459 (RA;US)
Experimental confirmation of the MAAP debris/concrete interaction model (DECOMP), 12:45466 (RA;US)
Fission product release from core-concrete melts, 12:45461 (RA;US)
Gas release measurement at the BETA-experiments on melt/concrete interaction, 12:45456 (RA;US)
High temperature regime of corium concrete interactions, 12:45467 (RA;US)
Impact of heat transfer models on core/concrete interaction, 12:45474 (RA;US)
Importance of core/concrete interactions for German risk investigations and experimental verification, 12:45449 (RA;US)
Improvements in CORCON heat transfer modeling, 12:45463 (RA;US)
Jet impingement phase of molten core-concrete interactions, 12:45465 (RA;US)
Mixing of the oxidic and metallic phases due to gas bubble transport, 12:45458 (RA;US)
Potential risk related consequences of core-concrete interactions, 12:45476 (RA;US)
Prediction of containment loads from the interaction of core debris with concrete, 12:45473 (RA;US)
Principal issues and EPRI research work on core debris/concrete interactions, 12:45450 (RA;US)
Program for LMFBR severe accident analysis including debris/concrete interaction at PNC, Japan, 12:45453 (RA;US)
Sustained uranium-concrete interactions: the SURC experiments, 12:45457 (RA;US)
UKAEA program on core debris - concrete interactions, 12:45451 (RA;US)
United States Nuclear Regulatory Commission research program on core debris/concrete interactions and ex-vessel fission-product release, 12:45452 (RA;US)
Vaporization of chemical species and the production of aerosols during a core debris/concrete interaction, 12:45470 (RA;US)
Verification of the WECHSL code with the BETA experiments, 12:45464 (RA;US)
Interactions
Aerosol and gas release source terms due to the interaction of hot, solid core-debris with concrete, 12:45460 (RA;US)
Sustained concrete attack by low-temperature, fragmented core debris, 12:45505 (R;US)

CORN STOVER

CRYOGENIC FLUIDS
Materials Handling
Space station experiment definition: Long-term cryogenic fluid storage. Final report, 12:45980 (R;US)
Storage
Space station experiment definition: Long-term cryogenic fluid storage. Final report, 12:45980 (R;US)

CRYOGENS
See CRYOGENIC FLUIDS

CRYOPUMPS
Design
Operating experiences and test results of six cold helium compressors, 12:45969 (R;US)
Performance
Operating experiences and test results of six cold helium compressors, 12:45969 (R;US)
Seals
Straight cylindrical seal for high-performance turbomachines, 12:45978 (R;US)

CRYPTOGRAPHY
Strong practical protocols, 12:45167 (R;US)

CRYSTAL DEFECTS
Meetings
Proceedings of the European Meeting on Positron Studies of Defects, 12:46743 (R;DD)
Positrons
Theoretical aspects of positrons in imperfect solids, 12:46744 (RA;DD)

CRYSTAL GROWTH
Czochralski Method
A finite element model for induction heating of a metal crucible, 12:46782 (R;US)

CRYSTAL LATTICES
Energy Transfer
"Hot spots": Subnanometer femtosecond energy localization, 12:46780 (R;US)

CRYSTALLINE ROCKS
See METAMORPHIC ROCKS

CRYSTALLOGRAPHY
Structural chemistry, 12:45902 (RA;ZA)

CULTURE MEDIA
Bench-Scale Experiments
Methane digestion laboratory tests in different media, 12:45200 (RA;DE;In German)

CULTURES (CELLS)
See CELL CULTURES

CYANIDES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
X-Ray Spectroscopy
Application of EXAFS spectroelectrochemsitry to structural studies of electroactive species immobilized on polymer coated electrodes, 12:45936 (BA;US)

CYCLIC STEAM INJECTION PROCESS
See FLUID INJECTION PROCESSES

CYCLOPENTADIENE
Complexes
An investigation of the photochemical properties of transition metal arene complexes: Final report for the period July 1, 1983 to June 30, 1987, 12:45943 (R;US)
Inorganic chemistry, 12:45903 (RA;ZA)

CYCLOTRONS
Flux Density
Calculations to obtain approximate field settings for the injection elements for given sector magnet field settings, 12:46914 (R;ZA)
Magnetic Fields
Calculations to obtain approximate field settings for the injection elements for given sector magnet field settings, 12:46914 (R;ZA)

CYSTEINE
Biological Functions
Restoration of enzyme activity to the Cys-329 mutant of ribulose biphosphate carboxylase/oxygenase by aminoethylation, 12:46248 (J;US)
Quantity Ratio
Restoration of enzyme activity to the Cys-329 mutant of ribulose biphosphate carboxylase/oxygenase by aminoethylation, 12:46248 (J;US)

CYTIDINE
Biochemical Reaction Kinetics
Stable reaction products of 3-methyl cytidine with chloroacetaldehyde and acetaldehyde, 12:46246 (J;US)

D

D MESONS
Prior to Jan. 1985 this information was indexed with the descriptor D-1865 RESONANCES.
CP Invariance
On the prospects of observing CP violation in bottom and charm decays, 12:46594 (BA;US)
Weak Hadronic Decay
On the prospects of observing CP violation in bottom and charm decays, 12:46594 (BA;US)
Weak Particle Decay
On the prospects of observing CP violation in bottom and charm decays, 12:46594 (BA;US)

D PLUS RESONANCES
See D MESONS

D ZERO RESONANCES
See D MESONS

D-1865 RESONANCES
See D MESONS

D*EFFECT
*See D*RESONANCES*

D*PHENOMENON
*See D*RESONANCES*

DAMAGE
Not to be used in reference to living organisms. Use more specific descriptor, if possible.
Mechanical Vibrations
Time-dependent processes and damage detection in thermal system components. Progress report: Second half of 1983 to first half of 1986, 12:45314 (R;DE;In German)
Nondestructive Testing
Time-dependent processes and damage detection in thermal system components. Progress report: Second half of 1983 to first half of 1986, 12:45314 (R;DE;In German)

Time Dependence
Time-dependent processes and damage detection in thermal system components. Progress report: Second half of 1983 to first half of 1986, 12:45314 (R;DE;In German)

DAMS
Flow Models
Flash gate board research: Progress report, 12:45222 (R;US)

DARK MATTER

Combined use of GC/MI/FTIR and GC/MS in the analyses of complex environmental samples, 12:45885 (BA;US)
Quantitative Chemical Analysis
Combined use of GC/MI/FTIR and GC/MS in the analyses of complex environmental samples, 12:45885 (BA;US)

ENVIRONMENTAL POLICY
Multi-Parameter Analysis
Development of pollutant emissions from motor vehicle traffic. Account of the effects of EC directives and tax incentives for low-pollution cars, 12:46195 (R;DE;In German)

ENVIRONMENTAL PROTECTION AGENCY
See US EPA

ENVIRONMENTAL TRANSPORT
See also RADIONUCLIDE MIGRATION
Mathematical Models
Contaminant control research for in situ thermal recovery processes, 12:44930 (RA;US)
Ground water transport model development, 12:44929 (RA;US)

ENZYMES
The enzyme code numbers from ENZYME NOMENCLATURE: RECOMMENDATIONS (1972) OF THE INTERNATIONAL UNION OF PURE AND APPLIED CHEMISTRY AND THE INTERNATIONAL UNION OF BIOCHEMISTRY is given in a Scope Note for the individual enzymes.
Radiation Protection
Biological applications and effects of optical masers. Annual report, 16 March 1985-15 March 1986 (Superoxide dismutase and catalase injected intravenously), 12:46324 (R;US)
Radiosensitivity Effects
Development of a model system to study leukotriene-induced modification of radiation sensitivity in mammalian cells, 12:46272 (R;US)

EOR
See ENHANCED RECOVERY

EPA
See US EPA

EQUATIONS (DIFFERENTIAL)
See DIFFERENTIAL EQUATIONS

EQUATIONS OF STATE
Phase equilibrium data for development of correlations for coal fluids: Report period, February 1, 1987 to August 15, 1987, 12:44854 (R;US)

ERBIUM 166
M1-Transitions
M1 transitions between collective levels and F-spin purity, 12:46685 (R;US)

ERBIUM 168
M1-Transitions
M1 transitions between collective levels and F-spin purity, 12:46685 (R;US)

ERBIUM OXIDES
Crystal Structure
Structural and dynamical studies of δ-Bi_2O^3 oxide ion conductors. III. Phase relationships in the system (Bi_2O_3)/sub 1-x/(M_2O_3)/sub x/ as a function of pressure and temperature (M = Y, Er, or Yb), 12:45788 (J;US)
Phase Studies
Structural and dynamical studies of δ-Bi_2O^3 oxide ion conductors. III. Phase relationships in the system (Bi_2O_3)/sub 1-x/(M_2O_3)/sub x/ as a function of pressure and temperature (M = Y, Er, or Yb), 12:45788 (J;US)

ERYTHROCYTES
Biochemical Reaction Kinetics
Platelet and erythrocyte kinetics studied with selenium-74, 12:46267 (RA;DE)

ESARDA
Safeguards
1987 target values for uncertainty components in fissile isotope and element assay, 12:45171 (J;US)

ESCA
See ELECTRON SPECTROSCOPY

ESTUARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS

ETHANAL
See ACETALDEHYDE

ETHANE
Critical Pressure
Phase equilibrium data for development of correlations for coal fluids: Report period, February 1, 1987 to August 15, 1987, 12:44854 (R;US)
Critical Temperature
Phase equilibrium data for development of correlations for coal fluids: Report period, February 1, 1987 to August 15, 1987, 12:44854 (R;US)
Equations of State
Phase equilibrium data for development of correlations for coal fluids: Report period, February 1, 1987 to August 15, 1987, 12:44854 (R;US)

ETHANOL PLANTS
Feasibility Studies
Economic feasibility study of an enzyme-based ethanol plant: A subcontract report, 12:45209 (R;US)
ETHERS
Chemical Reactions
Evaluation of laser desorbed transition-metal ions as analytical chemical ionization reagents by pattern recognition, 12:45870 (J;US)
ETHOCEL
See ETHERS
ETHYLALDEHYDE
See ACETALDEHYDE
ETR REACTOR
EGandG Idaho, Inc., Idaho Falls, Idaho
Computer-Aided Design
Status and results of systems code development and analysis, 12:46901 (R;US)
EUROPEAN COMMUNITIES
Coordinated Research Programs
Evaluation of the Community cost-shared research programme on solar, wind and biomass energy and of the Joint Research Centre's programme on non-nuclear energies (1979-1985), 12:45550 (R;DE)
Energy Conservation
Energy audit No. 6: Chemical industry in the European Economic Community. Summary report, 12:45562 (R;DE)
Research Programs
CEC sub-programme of R & D on new energy vectors, 12:44856 (R;XE)
EUROPEAN SAFEGUARD RESEARCH DEVELOPMENT A
See ESARDA
EUROPIUM 152 TARGET
Fabrication
Special targets for nuclear reaction and spectroscopic studies, 12:46672 (R;US)
EUROPIUM 154 TARGET
Fabrication
Special targets for nuclear reaction and spectroscopic studies, 12:46672 (R;US)
EUROPIUM 159
Energy Levels
Level structure of /sup 159/Eu from the βp decay of the recently discovered isotope /sup 159/Sm, 12:46673 (J;US)
EUROPIUM COMPLEXES
Thermodynamic Activity
Calculation of activity coefficients of dissolved substances from activities of solvent in multicomponent nonaqueous solutions (Complexes of Eu, Ce), 12:45928 (RA;SU;In Russian)
EUROPIUM IONS
Electron-Ion Collisions
Resonance enhancement of electron collision rates for fluorinelike ions, 12:46445 (J;US)
EUROPIUM ISOTOPES
See also EUROPIUM 159
Beta-Plus Decay
Transition through triaxial shapes of the light samarium isotopes and the beta decay of /sup 136,138,140/Eu, 12:46670 (J;US)
EUROPIUM OXIDES
Thermodynamic Properties
Thermodynamic properties of Ln-Cu-O (Ln = La, Pr, Nd, Sm, Eu) systems, 12:45769 (RA;SU;In Russian)
EUROPIUM SULFIDES
Bragg Reflection
Remanence on microscopic and macroscopic scales in the reentrant spin glass Eu/sub x/Sr/sub 1-//sub x/S, 12:45840 (J;US)
Hysteresis
Remanence on microscopic and macroscopic scales in the reentrant spin glass Eu/sub x/Sr/sub 1-//sub x/S, 12:45840 (J;US)
Neutron Diffraction
Remanence on microscopic and macroscopic scales in the reentrant spin glass Eu/sub x/Sr/sub 1-//sub x/S, 12:45840 (J;US)
EVALUATED NUCLEAR DATA FILE
See NUCLEAR DATA COLLECTIONS
EXCHANGE (HEAT)
See HEAT TRANSFER
EXCITONS
Coherent and incoherent exciton motion in the framework of the continuous time random walk, 12:46819 (R;XA)
Mathematical Models
Term value/band-gap energy correlations for solid rare gas excitons, 12:46414 (RA;US)
EXCRETION
Urinary excretion of cyclic nucleotides, creatinine prostaglandin E2 and thromboxane B2 from mice exposed to whole-body irradiation from an enhanced neutron field, 12:46271 (R;US)
EXCRETION ANALYSIS
See EXCRETION
EXOTIC RESONANCES
Tau electron atoms at RHIC, 12:46475 (BA;US)
Particle Identification
A search for the ξ(2.2) in p-barp formation, 12:46538 (BA;US)
Particle Production
A search for the ξ(2.2) in p-barp formation, 12:46538 (BA;US)
EXPERIMENTAL BREEDER REACTOR-2
See EBR-2 REACTOR
EXPERIMENTAL FACILITIES (ACCELERATOR)
See ACCELERATOR FACILITIES
EXPERIMENTAL NEOPLASMS
Hyperthermia
Combined effect of hyperthermia and X-irradiation on survival and protein pattern of P388 tumor bearing mice, 12:46282 (RA;HU)
Radiotherapy
Combined effect of hyperthermia and X-irradiation on survival and protein pattern of P388 tumor bearing mice, 12:46282 (RA;HU)
EXPERT SYSTEMS
Artificial Intelligence
Expert system application to fault diagnosis and procedure synthesis, 12:45445 (RA;US)
Data Covariances
An expert system for sensor data validation and malfunction detection, 12:45447 (RA;US)
Design
A methodology for fabrication of intelligent discrete-event simulation models, 12:46979 (R;US)
Knowledge Base
An expert system for sensor data validation and malfunction detection, 12:45447 (RA;US)
Application of artificial intelligence to the operation of nuclear power plants: Progress report, September 15, 1986-June 4, 1987, 12:45444 (R;US)
Expert system application to fault diagnosis and procedure synthesis, 12:45445 (RA;US)
Knowledge acquisition issues encountered during the development of an estimating expert system, 12:47005 (R;US)
The structure of an expert system to diagnose and supply a corrective procedure for nuclear power plant malfunctions, 12:45448 (RA;US)
Programming
CSRL application to nuclear power plant diagnosis and sensor data validation, 12:45446 (RA;US)
Research Programs
Application of artificial intelligence to the operation of nuclear power plants: Progress report, September 15, 1986-June 4, 1987, 12:45444 (R;US)
EXPLORATION
Cost Benefit Analysis
US oil: Critical resource at risk, 12:45572 (RA;US)
Economics
US oil: Critical resource at risk, 12:45572 (RA;US)
EXPLOSIVE FRACTURING
Parametric Analysis
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)

EXPLOSIVES
See also CHEMICAL EXPLOSIVES
Reliability
Pyrotechnic component development at Sandia National Laboratory, 12:46149 (R;US)
Storage Life
Pyrotechnic component development at Sandia National Laboratory, 12:46149 (R;US)
EXPOSURE (RADIATION DOSES)

FACILITIES (STORAGE)
See STORAGE FACILITIES
FACILITIES (TEST)
See TEST FACILITIES
FACULAE
Photography
Study of sizes, brightnesses, and dynamics of solar facular points, 12:46350 (R;US)
FALLOUT
For radioactive fallout only.
Sampling
Ambient fallout sampler adapted for the Negev desert, 12:46127 (RA;IL)
FALLOUT PARTICULATES
See FALLOUT PARTICLES
FALLOUT SHELTERS
Blast Effects
Blast testing of expedient shelters in model scale, 12:46146 (R;US)
FARMS
Economics
Importance of agricultural biomass conversion, 12:45204 (RA;DE;In German)
FAST BURST REACTOR FACILITY
See FBRF REACTOR
FAST EXPERIMENTAL BREEDER REACTOR JAPAN
See JOYO REACTOR
FAST FLUX TEST FACILITY REACTOR
See FFTF REACTOR
FBRF REACTOR
Fuel Assemblies
FFTF/IEM cell fuel pin weighing system - remote maintenance design considerations, 12:45429 (J;US)
FEDERAL REPUBLIC OF GERMANY
Air Pollution
Rational use of energy and change in the pattern of energy consumption in the Federal Republic of Germany - effects on the emission of SO_2 and NO/sub x/, 12:46184 (R;XU)
Biomass Conversion Plants
Prospects of biomass conversion in the Federal Republic of Germany, 12:45202 (RA;DE;In German)
Energy Consumption
Rational use of energy and change in the pattern of energy consumption in the Federal Republic of Germany - effects on the emission of SO_2 and NO/sub x/, 12:46184 (R;XU)
Energy Supplies
US hard coal mining - a study with special regard to the terms of delivery valid for industrial coal exports to the Federal Republic of Germany, 12:45585 (R;DE;In German)
Environmental Policy
Material on dying forests: Effectiveness analysis of emission-reducing measures. Sulphur dioxide, nitrogen oxides, 12:46194 (R;DE;In German)
Rational use of energy and change in the pattern of energy consumption in the Federal Republic of Germany - effects on the emission of SO_2 and NO/sub x/, 12:46184 (R;XU)
Fluidized Bed Boilers
State and prospects of fluidized bed combustion in the Federal Republic of Germany, 12:44960 (R;XU)
Fossil-Fuel Power Plants
Reduction of SO_2 and NO/sub x/ emissions from stationary sources in North Rhine-Westphalia - strategy and results, 12:44894 (R;XU)
Geothermal Resources
Magma content and temperature of the magma chambers of Lake Laach and the Rieden volcano. Final report, 12:45272 (R;DE;In German)
Waste Processing Plants
Flue gas desulphurization by lime/limestone processes in the Federal Republic of Germany, 12:44895 (R;XU)
FEED MATERIALS PLANTS
See also FEED MATERIALS PRODUCTION CENTER
Mill Tailings
Final rule for radon-222 emissions from licensed uranium mill tailings - economic analysis. Final report, 12:45152 (R;US)
FEED MATERIALS PRODUCTION CENTER
Water Treatment Plants
Biodenitrification demonstration test report, 12:45123 (R;US)
FEMALES
See also WOMEN
Adults
Specific absorbed fractions of energy at various ages from internal photon sources: 5, Fifteen-year-old male and adult female, 12:46718 (R;US)
FERMILAB ACCELERATOR
Facility at Fermi National Accelerator Laboratory, Batavia, Illinois, includes main synchroton, booster synchrotron, and linac.
Antiproton Sources
Present activity and future plans at Fermilab, 12:46515 (BA;US)
Experiment Planning
Present activity and future plans at Fermilab, 12:46515 (BA;US)
FERMILAB TEVATRON
Shower Counters
Search for long range interactions at highly relativistic velocities, 12:46517 (BA;US)
Target Chambers
Search for long range interactions at highly relativistic velocities, 12:46517 (BA;US)
FERMIONS
See also LEPTONS

Quantization
Quantization of fermions in external soliton fields, 12:46613 (R;AT)
FERMIUM 258
Spontaneous Fission
Evidence for bimodal fission in the heaviest elements, 12:46680 (R;US)
FERRIC COMPOUNDS
See IRON COMPOUNDS
FERRIMAGNETIC MATERIALS
Attenuation
Static magnetization and microwave loss in shock-modified ferrites, 12:45735 (R;US)
Magnetization
Static magnetization and microwave loss in shock-modified ferrites, 12:45735 (R;US)
Magnetostriction
Static magnetization and microwave loss in shock-modified ferrites, 12:45735 (R;US)
FERRITE GARNETS
Crystallization
Enthalpy of crystallization of rare earth ferrite garnets, 12:45913 (RA;SU;In Russian)
Transition Heat
Enthalpy of crystallization of rare earth ferrite garnets, 12:45913 (RA;SU;In Russian)
FERROCENE
Supercritical Fluid Chromatography
Separation of metal-containing compounds by supercritical fluid chromatography, 12:45863 (J;US)
FERROMAGNETIC MATERIALS
Inelastic Scattering
Spin flip inelastic scattering in electron energy loss spectroscopy of a ferromagnetic metal, 12:46421 (R;XA)
Spin Flip
Spin flip inelastic scattering in electron energy loss spectroscopy of a ferromagnetic metal, 12:46421 (R;XA)
FERROUS COMPOUNDS
See IRON COMPOUNDS
FERTILIZERS
Performance
Making coal ash fertilizer combined with phosphoric acid solutions (Part 1), 12:44883 (R;JP;In Japanese)
Waste Product Utilization
Making coal ash fertilizer combined with phosphoric acid solutions (Part 1), 12:44883 (R;JP;In Japanese)
FETUSES
Biological Radiation Effects
Developmental and teratogenic effects of 2450-MHz microwaves in mice. Final report, 12:46325 (R;US)
Radiation Protection
Justification of methodical procedures for the optimization of radiation protection in reproductive women, 12:46298 (RA;DD;In Russian)
FFTF REACTOR
Westinghouse Hanford Company, Richland, Washington
Containment
Integrated leak rate test of the FFTF [Fast Flux Test Facility] containment vessel, 12:45427 (R;US)
Control Elements
Analyses of eigenvalue bias and control rod worths in FFTF [Fast Flux Test Facility], 12:45397 (R;US)
Control Rod Worths
Analyses of eigenvalue bias and control rod worths in FFTF [Fast Flux Test Facility], 12:45397 (R;US)
Cover Gas
Liquid metal reactor cover gas purification and analysis in the USA, 12:45358 (RA;XE)
Radiological considerations of the reactor cover gas processing system at the FFTF, 12:45361 (RA;XE)
Reactor cover gas monitoring at the Fast Flux Test Facility, 12:45359 (RA;XE)
Summary of sodium vapor trap experience at the Fast Flux Test Facility, 12:45360 (RA;XE)
Fuel Assemblies
The effect of swelling in Inconel 600 on the performance of FFTF [Fast Flux Test Facility] reflector assemblies, 12:45423 (R;US)
Fuel Cans
Swelling of 316 stainless steel and D9 cladding in FFTF [Fast Flux Test Facility], 12:45424 (R;US)
Fuel Management
FFTF [Fast Flux Test Facility] management, 12:45428 (R;US)
Materials Testing
The in-reactor deformation of the PCA alloy, 12:45425 (R;US)
Personnel Dosimetry

Thermodynamic functions of formation of solid solutions of gallium arsenide and indium phosphide, 12:45919 (RA;SU;In Russian)
Formation Free Enthalpy
Thermodynamic functions of formation of solid solutions of gallium arsenide and indium phosphide, 12:45919 (RA;SU;In Russian)
Hall Effect
Critical layer thickness in In/sub 0.2/Ga/sub 0.8/As/GaAs single strained quantum well structures, 12:45831 (J;US)
Homojunctions
Influence of junctions on photoluminescence decay in thin-film devices, 12:45828 (J;US)
Impurities
Photocapacitance study of pressure-induced deep donors in GaAs:Si, 12:45834 (J;US)
Molecular Beam Epitaxy
Critical layer thickness in In/sub 0.2/Ga/sub 0.8/As/GaAs single strained quantum well structures, 12:45831 (J;US)
Photoconductivity
Photocapacitance study of pressure-induced deep donors in GaAs:Si, 12:45834 (J;US)
Photoionization
Photocapacitance study of pressure-induced deep donors in GaAs:Si, 12:45834 (J;US)
Photoluminescence
Critical layer thickness in In/sub 0.2/Ga/sub 0.8/As/GaAs single strained quantum well structures, 12:45831 (J;US)
Influence of junctions on photoluminescence decay in thin-film devices, 12:45828 (J;US)
Photoluminescence studies of GaAs/AlAs superlattices, 12:46779 (R;US)
Physical Radiation Effects
Irradiation induced defects in semiconductor compounds, 12:46776 (RA;DD)
Positron trapping after electron irradiation in GAAS, 12:46768 (RA;DD)
Thickness
Critical layer thickness in In/sub 0.2/Ga/sub 0.8/As/GaAs single strained quantum well structures, 12:45831 (J;US)
Vapor Deposited Coatings
Critical layer thickness in In/sub 0.2/Ga/sub 0.8/As/GaAs single strained quantum well structures, 12:45831 (J;US)
GALLIUM PHOSPHIDES
Crystal Defects
Investigation of defects in GaP using positron annihilation, 12:46770 (RA;DD)
GAMMA RADIATION
Data Analysis
Nuclear data evaluation and methodology, 12:45382 (RA;JP)
Radiation Streaming
Analysis of the FNS streaming experiment with albedo Monte Carlo method, 12:46915 (RA;JP)
RBE
Neutron RBEs and the radiosensitive target for mouse immature oocyte killing, 12:46302 (J;US)
GAMMA RADIOGRAPHY
Occupational Safety
Type testing of gamma radiography devices in the GDR, 12:45155 (RA;DD;In German)
Radiation Accidents
Analysis of unusual occurrences in the field of radiography and anti-emergency measures derived therefrom, 12:45512 (RA;DD;In German)
Radiation Protection
Performance of a written radiation protection inspection of nonstationary gamma radiography users, 12:45156 (RA;DD;In German)
Type testing of gamma radiography devices in the GDR, 12:45155 (RA;DD;In German)
Reporting Requirements
Performance of a written radiation protection inspection of nonstationary gamma radiography users, 12:45156 (RA;DD;In German)
GAMMA REACTIONS
See PHOTONUCLEAR REACTIONS
GAMMA SOURCES
For cosmic sources of gamma radiation use COSMIC GAMMA SOURCES.
Design
The Hermes-III Program, 12:46062 (R;US)
Gamma Spectra
Gamma-ray branching ratios of standard sources for γ-ray spectrometry, 12:46713 (RA;JP;In Japanese)
GAMMA SPECTRA
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
GAMMA SPECTROSCOPY
Research Programs
Experimental nuclear physics: Progress report, September 1986-July 1987, 12:46643 (R;US)
GAS ANALYSIS
Junction Diodes
Metal-sensing layer-semiconductor and metal-sensing layer-metal heterostructure gas sensors, 12:46125 (R;US)
GAS BURNERS
Energy Conservation
High-efficiency gas boilers. Edition 1986/1987. A new generation of economical heat-generating devices, 12:46045 (R;DE;In German)
Performance Testing
High-efficiency gas boilers. Edition 1986/1987. A new generation of economical heat-generating devices, 12:46045 (R;DE;In German)
GAS BURSTS
See ROCK BURSTS
GAS CENTRIFUGES
Power Supplies
Gas centrifuge power supplies (inverters): Key components and subassemblies, 12:45078 (R;US)
GAS COMPRESSORS
Design
Centrifugal compression packages for offshore applications, 12:45971 (RA;GB)
Design, testing and commissioning of the reinjection centrifugal compressors for the Alrar gas treatment plant, 12:45008 (RA;GB)
Helium circulator design considerations for modular high temperature gas-cooled reactor plant, 12:45347 (B;US)
Simulation of the transient performance of a compressor in a natural gas pumping station, 12:45012 (RA;GB)
Offshore Operations
Applications of dry gas seals to gas export compressors in the North Sea, 12:45011 (RA;GB)

Performance Testing
Design, testing and commissioning of the reinjection centrifugal compressors for the Alrar gas treatment plant, 12:45008 (RA;GB)
Fluid machinery for the oil, petrochemical and related industries. Proceedings of the Institution of Mechanical Engineers, 12:45970 (R;GB)
Hydraulic performance testing of centrifugal compressors - hydrocarbon versus inert gas (Effect of the thermodynamic properties of the test gas), 12:44979 (RA;GB)
Rotors
Design, testing and commissioning of the reinjection centrifugal compressors for the Alrar gas treatment plant, 12:45008 (RA;GB)
Seals
Applications of dry gas seals to gas export compressors in the North Sea, 12:45011 (RA;GB)
Fluid machinery for the oil, petrochemical and related industries. Proceedings of the Institution of Mechanical Engineers, 12:45970 (R;GB)

GAS COOLANTS
See GASES

GAS ENGINES
See INTERNAL COMBUSTION ENGINES

GAS FLOW
See also AIR FLOW
Hydrodynamics
Lattice gas hydrodynamics in two and three dimensions, 12:46479 (R;US)
Mathematical Models
Upwind and symmetric shock-capturing schemes, 12:46016 (R;US)

GAS GENERATORS
Design
Study of 2T/D pressurized two stage entrained bed coal gasifier's characteristics, 12:44825 (R;JP;In Japanese)
Flow Models
A study on flow and mixing characteristics in the entrained-bed coal gasifier (Part 2), 12:44823 (R;JP;In Japanese)
Flow Visualization
A study on flow and mixing characteristics in the entrained-bed coal gasifier (Part 2), 12:44823 (R;JP;In Japanese)
Performance
Study of 2T/D pressurized two stage entrained bed coal gasifier's characteristics, 12:44825 (R;JP;In Japanese)

GAS HEAT PUMPS
Control Systems
Improvement of the efficiency and drastic reduction of manufacturing costs of IC engine driven small fuel oil and gas heat pumps. Final report, 12:45599 (R;DE;In German)
Energy Conservation
Improvement of the efficiency and drastic reduction of manufacturing costs of IC engine driven small fuel oil and gas heat pumps. Final report, 12:45599 (R;DE;In German)

GAS LASERS
See also CARBON DIOXIDE LASERS
Flash Tubes
Laser research and development, 12:46925 (RA;US)
Research Programs
Laser research and development, 12:46925 (RA;US)

GAS TURBINE ENGINES
Air Pollution
Pollutant formation in heterogeneous mixtures of fuel drops and air, 12:45695 (R;US)
Catalytic Combustors
Basic research on natural gas combustion phenomena--catalytic combustion. Annual report 1986. Report for 15 January 1986-14 January 1987, 12:45015 (R;US)
Combustion Kinetics
Pollutant formation in heterogeneous mixtures of fuel drops and air, 12:45695 (R;US)
Heat Exchangers
AGT101 - Ceramic gas turbine development, 12:45703 (B;US)
Liquid Fuels
Transient spray-combustion computations. Report for October 1985-October 1986, 12:45960 (R;US)
Materials Testing
AGT101 - Ceramic gas turbine development, 12:45703 (B;US)
Particulates
Pollutant formation in heterogeneous mixtures of fuel drops and air, 12:45695 (R;US)
Seals
Development of the AGT101 regenerator seals, 12:45702 (B;US)
Temperature Measurement
Evaluating and testing thermographic phosphors for turbine-engine temperature measurements, 12:45698 (R;US)

GAS TURBINE POWER PLANTS
Cogeneration
Grid-interconnection performance requirements and current practice baseline assessment. Topical report, September 1985-April 1986, 12:45560 (R;US)

GAS TURBINES
See also COAL-FIRED GAS TURBINES
Cogeneration
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Combustors
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Corrosion
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Deposits
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Erosion
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Fluidized-Bed Combustors
Feasibility test of a low emissions topping combustor for fluidized bed applications, 12:46046 (B;US)
Turbine Blades
Effects of injection on condensation on a film-cooled surface, 12:46048 (B;US)
Temperature effect on particle dynamics and erosion in radial inflow turbine, 12:46047 (B;US)
Water-cooled gas turbine blade (Part 1), 12:45309 (R;JP;In Japanese)

GASEOUS EFFLUENTS
See GASEOUS WASTES

GASEOUS WASTES
See also FLUE GAS
Investigations on the influence of combustion products on the retention of radioiodine by activated carbons, 12:45422 (R;DE;In German)
Air Pollution Monitoring
Mound tritium stack air measurements - An update, 12:46189 (BA;US)
Desulfurization
Flue-gas desulphurization and denitrification: control of SO_4 and NO/sub x/ emissions from industrial processes, 12:44909 (R;XU)
Quantitative Chemical Analysis
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)

GASES
See also AIR
COAL GAS
COVER GAS
ELECTRON GAS
FUEL GAS
RARE GASES
SYNTHESIS GAS
Diffusion
Diffusion of gases in coals and chars: Quarterly technical progress report No. 7, March 15, 1987-June 14, 1987, 12:44871 (R;US)
Monitoring
Approaches to optical fibre based gas sensing in underground coal mines, 12:44934 (R;AU)

GASOLINE
Health Hazards
Health experience of workers in the petroleum manufacturing and distribution industry, 12:44986 (R;NL)
Taxes
Analysis of the effects of a gasoline tax, 12:45577 (RA;US)
GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES
GAUGE INVARIANCE
Functionals
Θ-sectors in the OS-construction, 12:46608 (R;HU)
Topology
Θ-sectors in the OS-construction, 12:46608 (R;HU)
GAUGE TRANSFORMATIONS
See GAUGE INVARIANCE
GDL FACILITY
LLE [Laboratory for Laser Energetics] review: Quarterly report, October-December 1986, 12:46905 (R;US)
GENE LOCI
See GENES
GENE MUTATIONS
DNA Repair
Biological effects of DNA repair, including mutagenesis: Final report for period January 1, 1984-May 31, 1987, 12:46278 (R;US)
DNA Sequencing
Biological effects of DNA repair, including mutagenesis: Final report for period January 1, 1984-May 31, 1987, 12:46278 (R;US)
GENE PROMOTORS
See GENE REPRESSORS
GENE REPRESSORS
DNA Sequencing
Biological effects of DNA repair, including mutagenesis: Final report for period January 1, 1984-May 31, 1987, 12:46278 (R;US)
Gene Mutations
Biological effects of DNA repair, including mutagenesis: Final report for period January 1, 1984-May 31, 1987, 12:46278 (R;US)
GENERAL RELATIVITY THEORY
Classical model of the Dirac electron in curved space, 12:46824 (R;XA)
GENERATORS (ELECTRIC)
See ELECTRIC GENERATORS
GENERATORS (STEAM)
See STEAM GENERATORS
GENES
See also ONCOGENES
Cloning
Organization of amplified metallothionein (MT) genes in cadmium-resistant Chinese hamster cells, 12:46320 (J;US)
GENETICS
Mathematical Models
Evolution of correlated characters in complex genetic systems and at the phenotypic level: Final report for period September 1, 1981 to August 31, 1987, 12:46250 (R;US)
GEOCHEMISTRY
Computerized Simulation
Precipitation kinetics option for the EQ6 geochemical reaction path code, 12:46339 (R;US)
Research Programs
Isotope and Nuclear Chemistry Division annual report FY 1986, October 1985-September 1986, 12:45957 (R;US)
GEOLOGIC FAULTS
Detection
Conversion of borehole Stoneley waves to channel waves in coal, 12:44933 (R;US)
Geologic History
Investigation of the Meers fault in southwestern Oklahoma, 12:46330 (R;US)
GEOLOGIC FRACTURES
See also GEOLOGIC FAULTS
Mapping
Test of the radar fracture mapping tool in a lake using a known target, 12:45286 (R;US)
GEOMAGNETIC STORMS
See MAGNETIC STORMS
GEOPHYSICS
Research Programs
Institute of Geophysics and Planetary Physics at Lawrence Livermore National Laboratory: 1986 annual report, 12:46334 (R;US)
GEORGIA
Geologic Deposits
The origin of manganese-rich metasediments and their relationship to iron formation and base metal deposits, western Georgia piedmont, 12:46329 (R;US)
GEOTHERMAL AREAS
See GEOTHERMAL FIELDS
GEOTHERMAL ENERGY
Research Programs
The geothermal program at Lawrence Berkeley Laboratory, 12:45290 (R;US)
Reviews
Geothermal progress monitor: Report No. 10, 12:45271 (R;US)
GEOTHERMAL FIELDS
Geology
Geology of Platanares geothermal area, Copan, Honduras, 12:45276 (R;US)
Geothermal Exploration
Bruchsal geothermal project. Seismic reflection surveys and their interpretation in view of the Bruchsal 1 and 2 geothermal drilling works, 12:45279 (R;DE;In German)
Research Programs
Bruchsal geothermal project. Seismic reflection surveys and their interpretation in view of the Bruchsal 1 and 2 geothermal drilling works, 12:45279 (R;DE;In German)
GEOTHERMAL FLUIDS
Origin
Chemical and isotopic characteristics of thermal fluids in the Long Valley caldera lateral flow system, California, 12:45281 (R;US)
GEOTHERMAL INDUSTRY
Global Aspects
Review of international geothermal activities and assessment of US industry opportunities: Final report, 12:45273 (R;US)
Review of international geothermal activities and assessment of US industry opportunities: Summary report, 12:45274 (R;US)
GEOTHERMAL REGIONS
See GEOTHERMAL FIELDS
GEOTHERMAL RESOURCES
Geologic Surveys
Investigation of the geothermal potential of the UK: diagenetic influences on the aquifer properties of the Sherwood Sandstone in the Wessex Basin, 12:45275 (R;GB)
GEOTHERMAL SYSTEMS
See also HOT-DRY-ROCK SYSTEMS
Exploration
Geothermal corehole drilling and operations, Platanares, Honduras, Central America, 12:45280 (R;US)
Stratigraphy
Stratigraphy, temperature profiles, and flow test data from the PLTG-1 and PLTG-2 coreholes, platanares geothermal system, Honduras, 12:45282 (R;US)
GEOTHERMAL WELLS
Cooling
Investigation of wellbore cooling by circulation and fluid penetration into the formation using a wellbore thermal simulator computer code, 12:45291 (R;US)
Fluid Flow
Stratigraphy, temperature profiles, and flow test data from the PLTG-1 and PLTG-2 coreholes, platanares geothermal system, Honduras, 12:45282 (R;US)
Geothermal Gradients
Stratigraphy, temperature profiles, and flow test data from the PLTG-1 and PLTG-2 coreholes, platanares geothermal system, Honduras, 12:45282 (R;US)
Packings
Developing hot dry rock reservoirs with inflatable open hole packers, 12:45288 (R;US)
Pressure Gradients
Two-phase flow in geothermal systems: Final report, July 15, 1986-April 30, 1987, 12:45292 (R;US)

Pressure Measurement
Vapor mass ratio measurements in geothermal production wells, 12:45283 (R;US)
Sonic Logging
Applications of a downhole programmable microprocessor for a geothermal borehole inspection tool, 12:45284 (R;US)
Temperature Measurement
Vapor mass ratio measurements in geothermal production wells, 12:45283 (R;US)
Two-Phase Flow
Two-phase flow in geothermal systems: Final report, July 15, 1986-April 30, 1987, 12:45292 (R;US)
Well Logging Equipment
Vapor mass ratio measurements in geothermal production wells, 12:45283 (R;US)

GERMAN DEMOCRATIC REPUBLIC
Nuclear Energy
Uses of atomic energy for the economic and social development in the German Democratic Republic, 12:46949 (R;DD)
Radiation Protection
Type testing of gamma radiography devices in the GDR, 12:45155 (RA;DD;In German)

GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY

GERMANIUM 74 TARGET
Argon 40 Reactions
Crystal blocking in heavy ion reactions, 12:46666 (J;NL)
Oxygen 16 Reactions
Crystal blocking in heavy ion reactions, 12:46666 (J;NL)

GERMANIUM ALLOYS
Electronic Structure
Positron-annihilation study of the electronic structure of Cu/sub 91/Ge$_9$, 12:45753 (J;US)
Evaporation
Vaporization rate and thermodynamic properties of titanium and vanadium germanides, 12:45723 (RA;SU;In Russian)
Thermodynamic Properties
Vaporization rate and thermodynamic properties of titanium and vanadium germanides, 12:45723 (RA;SU;In Russian)

GLACIERS
Mass Transfer
On the surging potential of polar ice streams: Antarctic surges: A clear and present danger?, 12:46328 (R;US)

GLASS
Absorptivity
Edge-cladding glasses for solid-state laser garnet crystals, 12:45827 (J;US)
Birefringence
Edge-cladding glasses for solid-state laser garnet crystals, 12:45827 (J;US)
Electronic Structure
Electronic structure calculation of amorphous solid, 12:46801 (J;US)
Laser Materials
Laser and optical technology, 12:46924 (RA;US)
Refractivity
Edge-cladding glasses for solid-state laser garnet crystals, 12:45827 (J;US)
Structure Factors
Structure of porous Vycor glass, 12:45833 (J;US)
Thermal Expansion
Edge-cladding glasses for solid-state laser garnet crystals, 12:45827 (J;US)

GLASS DEVELOPMENT LASER FACILITY
See GDL FACILITY

GLASSY METALS
See METALLIC GLASSES

GLUEBALLS
Particle Identification
Glueball candidates in hadroproduction, 12:46543 (BA;US)
Particle Production
Glueball candidates in hadroproduction, 12:46543 (BA;US)
Rest Mass
QCD glueballs in the presence of dynamcial fermions in a small periodic box, 12:46570 (J;NL)

GLUONIUM
See GLUEBALLS

GLUTATHIONE
Radiosensitivity Effects
Novel interaction of diethyldithiocarbamate with the glutathione/glutathione peroxidase system, 12:46270 (R;US)

GOBAR GAS
See METHANE

GOLD
Antiproton Reactions
Observation of antiproton annihilation in heavy nuclei at 100 GeV/c, 12:46660 (R;US)
Photoemission
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Surface Coating
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)

GOLD 197
Photonuclear Reactions
Absolute photoneutron cross sections for Zr, I, Pr, Au, and Pb, 12:46669 (J;US)

GOLD 197 REACTIONS
Spallation
Collectivity in composite fragment emission from relativistic heavy ion collisions, 12:46676 (R;DE)

GOLD 197 TARGET
Argon 40 Reactions
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
Gold 197 Reactions
Collectivity in composite fragment emission from relativistic heavy ion collisions, 12:46676 (R;DE)

GOLDSTONE BOSONS
See also AXIONS
Mass
Studies of chiral symmetry in a spontaneously broken lattice gauge theory, 12:46623 (BA;US)
Particle Structure
Substructure: A brief summary, 12:46574 (BA;US)

GRADED LIE GROUPS
Algebra
Baker—Campbell—Hausdorff relations for the super-Poincare group, 12:46833 (J;US)
Irreducible Representations
Irreducible *-representations of the Lie superalgebra osp(1,4) with finite-degenerated vacuum, 12:46587 (R;XA)

GRAFT POLYMERS
Stability
Effect of tertiary hydrogens on the stability of an ionic membrane in a chemically aggressive environment, 12:45817 (R;US)

GRAIN BOUNDARIES
Melting
On the search for experimentally observed grain boundary phase transitions, 12:45716 (R;US)
Phase Transformations
On the search for experimentally observed grain boundary phase transitions, 12:45716 (R;US)

GRAND UNIFIED THEORY
sin/sup 2/ θ/sub w/ and radiative corrections, 12:46578 (BA;US)
Testing
Experimental tests of unification models, 12:46560 (R;XA)

GRANITES
Temperature Effects
Acoustic emission and wave propagation monitoring at the spent fuel test: Climax, Nevada, 12:45113 (J;GB)
Measurement of displacements in large boreholes with a strain-gauged proving ring, 12:45149 (J;US)

GRAPHITE
Clathrates
Time-resolved x-ray scattering study of ordering kinetics in $SbCl_5$-intercalated graphite, 12:45837 (J;US)
Ion Microprobe Analysis
Multidimensional elemental analysis with the Sandia nuclear microprobe, 12:46777 (R;US)
Ore Processing
The recovery of graphite from borehole-core samples, 12:45977 (R;ZA)
GRAPHITE FIBERS
See CARBON FIBERS
GRAPHITE MODERATOR
See GRAPHITE
GRAVITATION
Conservation Laws
Geometrical-integrability constraints and equations of motion in four plus extended super spaces, 12:46838 (BA;US)
Equations of Motion
Geometrical-integrability constraints and equations of motion in four plus extended super spaces, 12:46838 (BA;US)
Spin
Role and behavior of spin in gravitational physics. Final report, 15 May 1986-15 May 1987, 12:46830 (R;US)
GRAVITATIONAL FIELDS
Michelson Interferometer
On the theory of the Michelson-Morley experiment in the Earth's gravitational field, 12:46817 (R;XA)
GRAVITATIONAL INTERACTIONS
Feeble forces, 12:46630 (BA;US)
The fifth force, 12:46572 (BA;US)
GRAY

Rivers
The St. Marys River, Michigan: An ecological profile, 12:46235 (R;US)
GREEN FUNCTION
Propagator
Extending Green's function formalism to general nonlinear equations, 12:46960 (R;US)
GREENHOUSE PROJECT
Radiation Doses
Analysis of radiation exposure for personnel on the residence islands of Enewetak Atoll after Operation Greenhouse, 1951-1952. Technical report, 3 December 85-20 April 1987, 12:46155 (R;US)
GREENHOUSES
Heating Systems
Economic evaluation of power plant waste heat utilization in hortithermal greenhouses, 12:45682 (R;DE;In German)
Waste Heat Utilization
Economic evaluation of power plant waste heat utilization in hortithermal greenhouses, 12:45682 (R;DE;In German)
GROSSWELZHEIM HDR REACTOR
See HDR REACTOR
GROUND MOTION
Computerized Simulation
Development of computer program for generation of simulated earthquake ground motions, 12:45330 (RA;JP)
GROUND WATER
Contamination
Long-term performance assessment of grouted phosphate/sulfate waste from N Reactor operations, 12:45132 (R;US)
TA-2 Water Boiler Reactor (Phase I) decommissioning: Resolving ground water interference during outdoor component removal and soil decontamination, 12:45126 (R;US)
Environmental Transport
Field facilities for subsurface transport research, 12:46327 (R;US)
Flow Models
Ground water transport model development, 12:44929 (RA;US)
Flow Rate
Numerical modeling of isothermal and nonisothermal flow in unsaturated fractured rock: A review, 12:45138 (R;US)
Geochemistry
Ground water geochemistry of short-term aquifer thermal energy storage test cycles, 12:46340 (J;US)
Laser Spectroscopy
Use of remote fiber spectroscopy for water chemistry monitoring in geothermal wells, 12:45937 (BA;US)
Mathematical Models
Profiling of organic solutes in oil shale by-product waters, 12:45061 (RA;US)
PH Value
Use of remote fiber spectroscopy for water chemistry monitoring in geothermal wells, 12:45937 (BA;US)
Radionuclide Migration
Analysis and predictions of water and solute transport in a large lysimeter, 12:46227 (RA;US)
Chemical behaviour of plutonium in natural, aquatic systems: Hydrolysis, carbonate complexation and redox reactions, 12:45954 (R;DE;In German)
Finite element simulation of moisture movement and solute transport in a large caisson, 12:46230 (RA;US)
Panel summary report, 12:46231 (RA;US)
Simulation of ion movement in soil using a continuous-time Markov process, 12:46228 (RA;US)
Time and frequency domain analysis of tracer migration in crushed tuff, 12:46229 (RA;US)
Temperature Measurement
Use of remote fiber spectroscopy for water chemistry monitoring in geothermal wells, 12:45937 (BA;US)
Water Pollution
Ground water transport model development, 12:44929 (RA;US)
Superfund enforcement decision document (EPA Region 5): Burlington Northern (BN), Brainerd, Minnesota, June 1986. Final report, 12:46238 (R;US)
Water Pollution Monitors
Processes affecting subsurface transport of leaking underground-storage-tank fluids, 12:46225 (R;US)
Water Quality
Characterization of waters from retort 1 at least tract C-a, 12:45070 (RA;US)

Repair of DNA treated with λ-irradiation and chemical carcinogens: Progress report, 1983-1987, 12:46239 (R;US)
GULF OF ALASKA
Aquatic Organisms
Lower Cook inlet meroplankton. Final report, 12:44999 (R;US)
Baseline Ecology
Distribution of larval and juvenile red king crabs (Paralithodes camtschatica) in Bristol Bay. Final report, 12:45002 (R;US)
Continental Shelf
Circulation and water masses in the Gulf of Alaska. Final report, 12:46341 (R;US)
Distribution of larval and juvenile red king crabs (Paralithodes camtschatica) in Bristol Bay. Final report, 12:45002 (R;US)

Erosion, deposition, faulting, and instability of shelf sediments: eastern Gulf of Alaska. Section 3. The taxonomy, ecology, and zoogeography of the Holocene and Pleistocene ostracode fauna of the Gulf of Alaska. Final report, 12:45001 (R;US)
Oil spill vulnerability, coastal morphology, and sedimentation of outer Kenai Peninsula and Montague Island. Final report, 12:45005 (R;US)
Outer Continental Shelf environmental assessment program. Final reports of principal investigators. Volume 46, 12:44997 (R;US)
Outer Continental Shelf environmental assessment program. Final reports of principal investigators. Volume 47, 12:45000 (R;US)
Outer Continental shelf environmental assessment program. Final reports of principal investigators. Volume 51, 12:45003 (R;US)
Source, composition, and flux of organic detritus in lower Cook Inlet. Final report, 12:44998 (R;US)

Oceanography
Circulation and water masses in the Gulf of Alaska. Final report, 12:46341 (R;US)

Plankton
Lower Cook inlet meroplankton. Final report, 12:44999 (R;US)

Seismicity
Measurement and location of earthquakes in western Alaska, the Gulf of Alaska, and the Bering Sea. Final report, 12:46333 (R;US)

GULF STREAM

Oceanography
Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS), 12:44972 (R;US)
Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS). Volume 1. Executive summary. Final report, 9 January 1984-18 February 1986, 12:44973 (R;US)
Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS). Volume 2. Technical report. Final report, 9 January 1984-18 February 1986, 12:44974 (R;US)
Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS). Volume 3. Appendices. Final report, 9 January 1984-18 February 1986, 12:44975 (R;US)

GYPSUM

Ground Disposal
Problems in the disposal of by-products with long-term thermal stability: fly ash and flue gas gypsum, 12:44916 (R;XU)

H

HABITAT

Mitigation
Natural propagation and habitat improvement: Volume 1, Oregon: Final and annual reports, 1986, 12:45224 (R;US)

HADDAM NECK REACTOR
See CONNECTICUT YANKEE REACTOR

HADRON REACTIONS

Quark Matter
Signal for quark gluon plasma in fragmentation region, 12:46559 (R;XA)

HADRON-HADRON INTERACTIONS

Annihilation
Glueball candidates in hadroproduction, 12:46543 (BA;US)

Multiple Production
Poisson-type multiplicity distribution and the Giovannini-Van Hove model, 12:46568 (J;DE)
The stochastic cell model for hadronic multiparticle distributions, 12:46580 (BA;US)

Particle Production
Glueball candidates in hadroproduction, 12:46543 (BA;US)

HADRONS
See also RESONANCE PARTICLES

Multiple Production
The stochastic cell model for hadronic multiparticle distributions, 12:46580 (BA;US)

Particle Production
New results on tau polarization measurement and electroweak interference in e/sup +/e/sup -/ annihilation into hadrons, 12:46540 (BA;US)

HAFNIUM OXIDES

Deposition
High damage threshold optical coatings, 12:45848 (BA;US)

Optical Properties
High damage threshold optical coatings, 12:45848 (BA;US)

HALIDES
See also CHLORIDES
FLUORIDES

Dissociation Heat
Thermochemistry of crystallosolvates of some metal chlorides, 12:45908 (RA;SU;In Russian)

Formation Heat
Thermochemistry of crystallosolvates of some metal chlorides, 12:45908 (RA;SU;In Russian)

HALL EFFECT

Quantization
Integral quantum Hall effect for nonspecialists, 12:46795 (J;US)

HALLEY COMET

Computerized Simulation
Model ion abundances for Comet Halley, 12:46361 (RA;FR)

Electron Density
Comet P/Giacobini-Zinner electron and H_2O column densities from ICE and ground-based observations, 12:46360 (RA;FR)

Electron Spectra
Upstream region, foreshock and bow shock wave at Halley's Comet from plasma electron measurements, 12:46356 (RA;US)

Heavy Ions
Observations of heavy energetic ions far upstream from Comet Halley, 12:46355 (RA;US)

Hydroxyl Radicals
Detection of OH from Comet Halley in the far-infrared, 12:46357 (RA;US)
VLA observations of Comet Halley: the brightness distribution of OH around the comet, 12:46358 (RA;US)

Ions
Model ion abundances for Comet Halley, 12:46361 (RA;FR)

Oxygen
Oxygen production rates for P/Halley over much of the 1985-1986 apparition, 12:46359 (RA;US)

Water
Comet P/Giacobini-Zinner electron and H_2O column densities from ICE and ground-based observations, 12:46360 (RA;FR)

HAM

HARD COAL
See BLACK COAL
HARD SOLDERING
See BRAZING
HARMONIC OSCILLATORS
Coupling
Primer on coupling collective electronic oscillations to nuclei, 12:46826 (R;US)
HAULAGE EQUIPMENT
Maintenance
Mechanization of ancillary work in the case of combined transport and transport by lorry, 12:44936 (R;XU)
Vehicle monitoring system at Widco mine, 12:44940 (R;CA)
Monitoring
Vehicle monitoring system at Widco mine, 12:44940 (R;CA)
HAZ
See HEAT AFFECTED ZONE
HAZARDOUS MATERIALS
Not for radioactive materials.
Air Pollution
Evaluation of combustion processes for destruction of organic wastes - General Portland. Air pollution test report, 12:45683 (R;US)
Aluminium Oxides
Health-hazard evaluation report HETA 84-186-1777, Sancap Abrasives, Inc., Alliance, Ohio, 12:46172 (R;US)
Butadiene
Industry-wide studies report of an in-depth survey at Denka Chemical Corporation, Houston, Texas, July 14-17, 1986, 12:46174 (R;US)
Industrywide studies report of an in-depth survey at E.I. duPont Denemours and Company, Sabine River Works, Orange, Texas, August 25-28, 1986, 12:46173 (R;US)
Carcinogens
Mutagenicity in Salmonella of hazardous wastes and urine from rats fed these wastes, 12:46317 (R;US)
Chemical Wastes
Safety considerations for the operation of a thermal-destructor unit for Chemical Surety Materiel 3'x' items, 12:46052 (R;US)
Disinfectants
Health-hazard evaluation report HETA 86-226-1769, Montgomery Hospital, Norristown, Pennsylvania, 12:46176 (R;US)
Dusts
Health-hazard evaluation report HETA 84-449-1778, Agrico Chemical Company, Pierce, Florida, 12:46175 (R;US)
Ground Disposal
Preliminary report of the past and present uses, storage, and disposal of hazardous materials at the Lawrence Livermore National Laboratory, 12:45140 (R;US)
Materials Handling
The Hazardous Material Technician Apprenticeship Program at Lawrence Livermore National Laboratory, 12:46200 (R;US)
Mutagens
Mutagenicity in Salmonella of hazardous wastes and urine from rats fed these wastes, 12:46317 (R;US)
Organic Compounds
PIC (products of incomplete combustion) analysis methods. Final report, March 1984-April 1985, 12:45684 (R;US)
Packaging
Quality assurance for packaging of radioactive and hazardous materials, 12:45160 (R;US)
Risk Assessment
Risk assessment, management, communication: a guide to selected sources. Update. Information guide, 12:45541 (R;US)
Separation Processes
Bench-scale magnetic separation of Department of Energy wastes, 12:45854 (R;US)
Silica
Health-hazard evaluation report HETA 84-186-1777, Sancap Abrasives, Inc., Alliance, Ohio, 12:46172 (R;US)
Solvents
Health-hazard evaluation report HETA 83-194-1779, Dade County Fire Department, Miami, Florida, 12:45542 (R;US)
Waste Disposal
Sulfur hexaflouride as a tracer for the verification of waste-destruction levels in an incineration process. Final report, May 1984-April 1986, 12:46041 (R;US)
Superfund Record of Decision (EPA Region 1): Tinkham Garage, Londonderry, New Hampshire, September 1986. Final report, 12:46237 (R;US)
Superfund Record of Decision (EPA Region 4): Pioneer Sand Company, Warrington, Florida, September 1986. Final report, 12:46209 (R;US)
Superfund Record of Decision (EPA Region 5): Arrowhead Refinery, Duluth, Minnesota, September 1986. Final report, 12:46210 (R;US)
Superfund Record of Decision (EPA Region 6): Sikes Disposal Pits, Crosby, Texas, September 1986. Final report, 12:46211 (R;US)
Superfund enforcement decision document (EPA Region 5): Burlington Northern (BN), Brainerd, Minnesota, June 1986. Final report, 12:46238 (R;US)
Wastewater characterization and hazardous-waste survey, Hickam AFB, Hawaii. Final report, 13-27 January 1987, 12:46214 (R;US)
Waste Water
Wastewater characterization and hazardous-waste survey, Hickam AFB, Hawaii. Final report, 13-27 January 1987, 12:46214 (R;US)
Wastewater characterization survey, Plattsburgh AFB, New York. Final report, 12:46215 (R;US)

Experiment Planning
Non-accelerator experiments, 12:46520 (BA;US)
Present activity and future plans at Fermilab, 12:46515 (BA;US)
Indexes
Current experiments in elementary particle physics, 12:46511 (R;US)
Meetings
1986 CERN School of Physics. Proceedings, 12:46553 (R;XC)
Aspen Winter Physics Conference, 1st, Aspen, CO, Jan. 6-19, 1985, Proceedings, 12:46489 (J;US)
Research Programs
[Research in elementary particle physics]: Progress report covering the period from August 1, 1986 to July 31, 1987, 12:46488 (R;US)
Current experiments in elementary particle physics, 12:46511 (R;US)
Present activity and future plans at Fermilab, 12:46515 (BA;US)
Search for long range interactions at highly relativistic velocities, 12:46517 (BA;US)
Searches for monopoles and quarks, 12:46519 (BA;US)
Reviews
Accelerator technology, 12:46065 (BA;US)
HIGH ENERGY RADIOTHERAPY
See RADIOTHERAPY
HIGH EXPLOSIVES
See CHEMICAL EXPLOSIVES
HIGH SPIN STATES
Research Programs
Experimental nuclear physics: Progress report, September 1986-July 1987, 12:46643 (R;US)
HIGH TEMPERATURE GAS COOLED AND GRAPHITE
See HTGR TYPE REACTORS
HIGH-BETA PLASMA
Beta from 0.1 to 1.
Ballooning Instability
Second regime tokamak operation at large aspect ratio, 12:46848 (R;US)
Drift Instability
Linear and nonlinear description of drift instabilities in a high-beta plasma, 12:46880 (J;US)
Equilibrium
Second regime tokamak operation at large aspect ratio, 12:46848 (R;US)
Mathematical Models
Second regime tokamak operation at large aspect ratio, 12:46848 (R;US)
Nonlinear Problems
Linear and nonlinear description of drift instabilities in a high-beta plasma, 12:46880 (J;US)
HIGH-LEVEL RADIOACTIVE WASTES
Classification
Waste characterization (Non-fuel bearing), 12:45108 (RA;US)
Data Base Management
Office of Civilian Radioactive Waste Management (OCRWM), Waste Systems Data Development (WSDD) Program: Waste characterization subtask, 12:45133 (RA;US)
Filtration
Processing and disposal of defense nuclear waste at the Savannah river plant, 12:45146 (BA;US)
Materials
Office of Civilian Radioactive Waste Management (OCRWM), Waste Systems Data Development (WSDD) Program: Waste characterization subtask, 12:45133 (RA;US)
Waste characterization (Non-fuel bearing), 12:45108 (RA;US)
Radioactive Waste Management
Office of Civilian Radioactive Waste Management (OCRWM), Waste Systems Data Development (WSDD) Program: Waste characterization subtask, 12:45133 (RA;US)

Spent fuel storage technical exchange, 12:45092 (R;US)
Radioactive Waste Processing
Leaching of saltstone: Laboratory and field testing and mathematical modeling, 12:45119 (R;US)
Radioactive Waste Storage
Spent fuel storage technical exchange, 12:45092 (R;US)
Radioactivity
Office of Civilian Radioactive Waste Management (OCRWM), Waste Systems Data Development (WSDD) Program: Waste characterization subtask, 12:45133 (RA;US)
Underground Disposal
Flow equations in terms of piezometer levels for nonisothermal fluid in low-permeability porous medium, 12:45144 (J;US)
Numerical modeling of isothermal and nonisothermal flow in unsaturated fractured rock: A review (NNWSI), 12:45138 (R;US)
Probable maximum flood analysis, Richton Dome, Mississippi-Phase I: Technical report, 12:45115 (R;US)
Processing and disposal of defense nuclear waste at the Savannah river plant, 12:45146 (BA;US)
Underground Storage
Post-test thermal calculations and data analyses for the Spent Fuel Test, Climax (NNWSI), 12:45141 (R;US)
Vitrification
Processing and disposal of defense nuclear waste at the Savannah river plant, 12:45146 (BA;US)
The properties of the vitrified concentrated wastes in BWR, 12:45336 (RA;JP)
Volume
Waste characterization (Non-fuel bearing), 12:45108 (RA;US)

HIGHWAYS
See ROADS

HISTONES
Genes
The impact of energy-related pollutants on chromosome structure: Final report, January 1, 1984-December 31, 1986, 12:46306 (R;US)
Protein Structure
The impact of energy-related pollutants on chromosome structure: Final report, January 1, 1984-December 31, 1986, 12:46306 (R;US)

HOG FUEL
See WOOD WASTES

HOISTS
Performance Testing
Maintenance of efficient main shaft winding at great depths, 12:44946 (R;XE;In German)

HOLMIUM 165 TARGET
Carbon 12 Reactions
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
Neon 20 Reactions
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
Pion Plus Reactions
Pion charge exchange and nuclear structure: II, Nuclear structure calculation, 12:46686 (R;US)

HOLMIUM ALLOYS
Thermodynamic Properties
Thermodynamic properties of HoBi and HoSb compounds, 12:45722 (RA;SU;In Russian)

HONDURAS
Geothermal Fields
Geology of Platanares geothermal area, Copan, Honduras, 12:45276 (R;US)
Geothermal Gradients
Geothermal corehole drilling and operations, Platanares, Honduras, Central America, 12:45280 (R;US)
Geothermal Systems
Stratigraphy, temperature profiles, and flow test data from the PLTG-1 and PLTG-2 coreholes, platanares geothermal system, Honduras, 12:45282 (R;US)
Well Drilling
Geothermal corehole drilling and operations, Platanares, Honduras, Central America, 12:45280 (R;US)

HORIZONTAL AXIS TURBINES
Aerodynamics
Performance and aerodynamic braking of a horizontal-axis wind turbine from small-scale wind tunnel tests, 12:45299 (R;US)
Performance Testing
Performance and aerodynamic braking of a horizontal-axis wind turbine from small-scale wind tunnel tests, 12:45299 (R;US)

HORTICULTURE
Economics
Economic evaluation of power plant waste heat utilization in hortithermal greenhouses, 12:45682 (R;DE;In German)
Sensitivity Analysis
Economic evaluation of power plant waste heat utilization in hortithermal greenhouses, 12:45682 (R;DE;In German)

HOSPITALS
Hazardous Materials
Health-hazard evaluation report HETA 86-226-1769, Montgomery Hospital, Norristown, Pennsylvania, 12:46176 (R;US)
Incinerators
Evaluation test on a hospital-refuse incinerator at Cedars Sinai Medical Center, Los Angeles, California. Final report, 12:46168 (R;US)
Solar Water Heating
Performance of the solar heating system at St. Saviours Hospital, Jersey, 12:45267 (R;GB)

HOT GAS CLEANUP
Meetings
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Technology Assessment
Elimination of SO_2 and reduction of NO/sub x/ formation through choice of appropriate fuel conversion and connected desulphurization, 12:45321 (R;XU)

HOT WATER HEATERS
See WATER HEATERS

HOT-DRY-ROCK SYSTEMS
Heat Transfer
A tracer-based model for heat transfer in a hot dry rock reservoir, 12:45277 (R;US)
Hydraulic Fracturing
Developing hot dry rock reservoirs with inflatable open hole packers, 12:45288 (R;US)
Identification of MHF [massive hydraulic fracturing] fracture planes and flow paths: A correlation of well log data with patterns in locations of induced seismicity, 12:45287 (R;US)
Seismicity
CSDP: The seismology of continental thermal regimes: Final report for period April 1, 1986-April 1, 1987, 12:46332 (R;US)
Temperature Distribution
Magma content and temperature of the magma chambers of Lake Laach and the Rieden volcano. Final report, 12:45272 (R;DE;In German)
Well Drilling
Redrilling of well EE-3 at the Los Alamos National Laboratory HDR [Hot Dry Rock] project, 12:45289 (R;US)

HOUSES
Energy Efficiency
Analysis of the consumption of electrically heated hot water in houses, 12:45605 (R;GB)
Water Heating
Analysis of the consumption of electrically heated hot water in houses, 12:45605 (R;GB)
Consumption profiles for gas and oil heated hot water in houses and a comparison of usage patterns with electrically heated water, 12:45606 (R;GB)

HTGR TYPE REACTORS
Containment Systems
An assessment of the modular HTGR [High Temperature Gas-Cooled Reactor] containment system, 12:45345 (R;US)
Gas Compressors
Helium circulator design considerations for modular high temperature gas-cooled reactor plant, 12:45347 (B;US)

Reactor Cores
Annular core for Modular High-Temperature Gas-Cooled Reactor (MHTGR), 12:45346 (R;US)
Reactor Licensing
Safety and licensing of MHTGR [Modular High Temperature Gas Cooled Reactor], 12:45480 (R;US)
Reactor Safety
Safety and licensing of MHTGR [Modular High Temperature Gas Cooled Reactor], 12:45480 (R;US)
Risk Assessment
Probabilistic risk assessment of the modular high-temperature gas-cooled reactor, 12:45481 (R;US)
Turbogenerators
Helium circulator design considerations for modular high temperature gas-cooled reactor plant, 12:45347 (B;US)

HUFF AND PUFF PROCESS
See FLUID INJECTION PROCESSES

HUGENHOLTZ-PINES THEORY
See HYDROGEN

HUMAN CELLS
See ANIMAL CELLS

HYBRID REACTORS
Breeding Blankets
Neutronics study of fusion-fission hybrid blanket in a swimming pool-type tokamak reactor, 12:46916 (RA;JP)
Updated reference design of a liquid-metal-cooled tandem mirror fusion breeder, 12:46936 (J;US)
Chemical Reaction Kinetics
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
Design
Updated reference design of a liquid-metal-cooled tandem mirror fusion breeder, 12:46936 (J;US)
Radioactive Wastes
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
Reactor Operation
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
Reactor Physics
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
Reactor Safety
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)

HYDRAULIC RAMS
See PUMPS

HYDRAULIC TURBINES
Vents
Environmental & water-quality operational studies: improvement of hydropower-release dissolved oxygen with turbine venting. Final report, 12:45223 (R;US)

HYDROCARBONS
See also ALKANES
ANTHRACENE
BENZOPYRENE
POLYCYCLIC AROMATIC HYDROCARBONS
POLYENES
STYRENE
TOLUENE
Combustion Properties
Laser-enhanced flame ionization detector, 12:45867 (J;US)
Laser Spectroscopy
Laser-enhanced flame ionization detector, 12:45867 (J;US)

HYDRODYNAMICS
See also MAGNETOHYDRODYNAMICS
Dynamical grid optimization for Lagrangian hydrodynamics, 12:46476 (R;US)
Nonlinear Problems
Stability and bifurcation of a rotating planar liquid drop, 12:46482 (J;US)
Shock Waves
Errors for calculations of strong shocks using an artificial viscosity and an artificial heat flux, 12:46486 (J;US)

HYDROELECTRIC POWER
Consumption Rates
Realizing coal's potential, 12:45574 (RA;US)
Supporting analysis for US energy outlook (Forecasting to 1995), 12:45565 (RA;US)
World energy outlook: Economic and security implications, 12:45571 (RA;US)
Prices
World energy outlook: Economic and security implications, 12:45571 (RA;US)
Production
Supporting analysis for US energy outlook (Forecasting to 1995), 12:45565 (RA;US)

HYDROELECTRIC POWER PLANTS
Water Quality
Environmental & water-quality operational studies: improvement of hydropower-release dissolved oxygen with turbine venting. Final report, 12:45223 (R;US)

HYDROELECTRICITY
See HYDROELECTRIC POWER

HYDROFLUORIC ACID
Atom-Molecule Collisions
State changing in collisions of Rb(ns) Rydberg atoms with HF, 12:46444 (J;US)

HYDROGEN
Atom-Atom Collisions
Quantum reactive scattering in three dimensions using hyperspherical (APH) coordinates. Theory, 12:46436 (J;US)
Bioconversion
Bioconversion of methane and hydrogen to organic materials for chemical industry, 12:45931 (R;JP;In Japanese)
Chemical Reaction Kinetics
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)
Chemisorption
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Collisions
Extreme-ultraviolet light emission from 50-MeV H^0 impact on aluminum, 12:46788 (J;US)
Computerized Simulation
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)
Density
Superdense muonic matter, 12:46419 (R;US)
Dissolution
Critical behavior of hydrogen in Nb/Ta superlattices, 12:45838 (J;US)
Electron-Molecule Collisions
Electron degradation and yields of initial products. I. Excited species generated by electrons in binary mixtures, 12:46437 (J;US)
Emission Spectroscopy
Direct detection of optical radiation through a sampling orifice for inductively coupled plasma atomic emission spectroscopy, 12:46423 (R;US)
Heat Transfer
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)
Ion Collisions
Heavy-particle collisions in the plasma edge, 12:46841 (R;US)
Ion Microprobe Analysis
Multidimensional elemental analysis with the Sandia nuclear microprobe, 12:46777 (R;US)
Ion-Molecule Collisions
Correlation effects on double electron capture in highly-charged, low-energy ion-atom collisions, 12:46407 (R;US)
Evidence for correlated double-electron capture in slow collisions of multicharged ions with He and H_2, 12:46466 (J;NL)
Ion-X-ray coincidence measurements in heavy ion collisions, 12:46459 (J;NL)
Ion-X-ray coincidence measurements in heavy ion collisions, 12:46472 (J;NL)
Mass Spectroscopy
Low-voltage, high-resolution mass spectrometric methods for fuel analysis: application to coal distillates, 12:44880 (J;US)

Metallurgical Effects
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
Phase Studies
Superdense muonic matter, 12:46419 (R;US)
Phase Transformations
Critical behavior of hydrogen in Nb/Ta superlattices, 12:45838 (J;US)
Solubility
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)
Superlattices
Critical behavior of hydrogen in Nb/Ta superlattices, 12:45838 (J;US)

HYDROGEN 1 MINUS BEAMS
Beam Neutralization
High-charge-state plasma neutralizer for an energetic H^- beam, 12:46455 (J;US)
Measurement of plasma production and neutralization in gas neutralizers, 12:46456 (J;US)
Beam Optics
Transverse-field focussing beam transport experiment, 12:46452 (J;US)
Beam Transport
Panel session: Transport of negative ion beams, 12:46453 (J;US)
Transverse-field focussing beam transport experiment, 12:46452 (J;US)

HYDROGEN 3
See TRITIUM

HYDROGEN COMPOUNDS
See also DEUTERIUM COMPOUNDS
HYDROGEN SULFIDES
WATER
Fluorescence Spectroscopy
High sensitivity optical detection methods in hydroxide eluent suppressed anion chromatography via post suppression ion exchange, 12:45871 (J;US)
Ion Exchange Chromatography
High sensitivity optical detection methods in hydroxide eluent suppressed anion chromatography via post suppression ion exchange, 12:45871 (J;US)

HYDROGEN FLUORIDES

HYDROGEN PRODUCTION
Clean carbon and hydrogen fuels from coal and other carbonaceous raw materials (HYDROCARB process), 12:45186 (R;US)

HYDROGEN SULFIDES
Absorption
CNG acid gas removal process: Final report, 12:44839 (R;US)
Air Pollution Control
Combustion of coal/water mixtures with thermal preconditioning, 12:45319 (B;US)
Removal
CNG acid gas removal process: Final report, 12:44839 (R;US)
Off-gas characterization and cleanup for simulated in situ retorting experiments, 12:45059 (RA;US)
Stretford process status and R and D needs. Topical report, 12:45009 (R;US)

HYDROGENATION
Catalysts
Catalytic methods for improved coal liquefaction and hydrotreating: Quarterly report No. 7 for the period March 23, 1987 through June 22, 1987, 12:44851 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 April-30 June 1985, 12:44846 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January 1985-31 March 1985, 12:44845 (R;US)

HYDROXY COMPOUNDS
For organic compounds only and excluding SACCHARIDES, GLYCOSIDES and HYDROXY ACIDS.
See also ALCOHOLS
PHENOLS
Chemical Reaction Kinetics
Chemical Kinetic Data Base for Combustion Chemistry. Part 2. Methanol, 12:45962 (J;US)
Combustion
Chemical Kinetic Data Base for Combustion Chemistry. Part 2. Methanol, 12:45962 (J;US)

HYDROXYBENZENE
See PHENOL

HYPERGEOMETRIC FUNCTIONS
Behaviour at unit argument of the hypergeometric function /sub 3/F/sub 2/, 12:46970 (R;DE)

HYPOTENSION
Radioinduction
Dose-dependent radiation-induced hypotension in the canine, 12:46275 (R;US)

I

IDAHO
Energy Policy
Municipal solid waste resource assessment for energy recovery in Idaho, 12:45568 (R;US)
Energy Recovery
Municipal solid waste resource assessment for energy recovery in Idaho, 12:45568 (R;US)

IDAHO CHEMICAL PROCESSING PLANT
Denitration
Pilot plant operation of a geometrically safe denitrator at the Idaho Chemical Processing Plant, 12:45077 (R;US)

IDAHO NATIONAL ENGINEERING LABORATORY
Prior to 1976 known as NRTS and older material is so indexed.
Radioactive Waste Disposal
Overview: Defense high-level waste technology program, 12:45147 (BA;US)
Radioactive Waste Processing
Overview: Defense high-level waste technology program, 12:45147 (BA;US)
Radioactive Waste Storage
Overview: Defense high-level waste technology program, 12:45147 (BA;US)
Spent Fuel Storage
Spent Fuel Dry Cask Storage program at the Idaho National Engineering Laboratory (Viewgraphs only), 12:45093 (RA;US)

IGNITION SYSTEMS
Design
Pyrotechnic component development at Sandia National Laboratory, 12:46149 (R;US)

IGT WASTE PROCESS
See BIOGAS PROCESS

ILLINOIS
Buildings
Illinois state buildings energy-expense study FY86 and projected FY87-90, 12:45567 (R;US)
Waste Management
Recycling in Illinois: survey results and analysis, 12:45544 (R;US)

ILLUMINATION SYSTEMS

INCIDENTS
See ACCIDENTS
INCINERATION
See COMBUSTION
INCINERATORS
Air Pollution Abatement
Evaluation test on a hospital-refuse incinerator at Cedars Sinai Medical Center, Los Angeles, California. Final report, 12:46168 (R;US)
By-Products
Incineration of water pollutants with activated char from coal, wood, or crop residues in a system designed to produce energy and pyrolysis by-product chemicals. Final Technical completion report (Final), 12:46224 (R;US)
Combustion Products
PIC (products of incomplete combustion) analysis methods. Final report, March 1984-April 1985, 12:45684 (R;US)
Efficiency
Sulfur hexaflouride as a tracer for the verification of waste-destruction levels in an incineration process. Final report, May 1984-April 1986, 12:46041 (R;US)
Energy Recovery
Incineration of water pollutants with activated char from coal, wood, or crop residues in a system designed to produce energy and pyrolysis by-product chemicals. Final Technical completion report (Final), 12:46224 (R;US)
Heat Recovery
Evaluation test on a hospital-refuse incinerator at Cedars Sinai Medical Center, Los Angeles, California. Final report, 12:46168 (R;US)
Operation
Safety considerations for the operation of a thermal-destructor unit for Chemical Surety Materiel 3'x' items, 12:46052 (R;US)
INCLUSION COMPLEXES
See CLATHRATES
INCOLOY 800
Intergranular Corrosion
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)
Tubes
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)
INCONEL 600
Intergranular Corrosion
Intergranular attack of alloy 600 tubing: Simulation tests: Interim report, 12:45341 (R;US)
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)
Tubes
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)
INCONEL 690
Intergranular Corrosion
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)
Tubes
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)
INDIUM 111
Separation Processes
Analytical Chemistry, 12:45953 (RA;ZA)
INDIUM ALLOYS
Electron-Positron Interactions
Effects of lattice anisotropy on positron parameters in In-Pb alloys, 12:46758 (RA;DD)
Precipitation
Positron annihilation study of precipitation effects in CuIn and CuSb alloys, 12:46762 (RA;DD)
INDIUM ARSENIDES
Hall Effect
Critical layer thickness in In/sub 0.2/Ga/sub 0.8/As/GaAs single strained quantum well structures, 12:45831 (J;US)
Molecular Beam Epitaxy
Critical layer thickness in In/sub 0.2/Ga/sub 0.8/As/GaAs single strained quantum well structures, 12:45831 (J;US)
Photoluminescence
Critical layer thickness in In/sub 0.2/Ga/sub 0.8/As/GaAs single strained quantum well structures, 12:45831 (J;US)
Thickness
Critical layer thickness in In/sub 0.2/Ga/sub 0.8/As/GaAs single strained quantum well structures, 12:45831 (J;US)
INDIUM BROMIDES
Dissociation Heat
Calculation of constants and heat effects of thermal dissociation of indium chalcogenohalides, 12:45922 (RA;SU;In Russian)
INDIUM CHLORIDES
Formation Heat
Formation enthalpy of indium trichloride, 12:45910 (RA;SU;In Russian)
INDIUM COMPOUNDS

Mortality
Pathogenic regulation of running water macroinvertebrate populations: Progress report, 12:46212 (R;US)
IN-SITU COMBUSTION
Bench-Scale Experiments
Contracts for field projects and supporting research on enhanced oil recovery: Progress review No. 47, Quarter ending June 1986, 12:44977 (R;US)
Computerized Simulation
Numerical model for thermal recovery processes in tar sand: description and application, 12:45030 (RA;US)
Numerical simulation of four forward combustion tube experiments using the Tar Sand Triangle resource, 12:45031 (RA;US)
Mathematical Models
Numerical model for thermal recovery processes in tar sand: description and application, 12:45030 (RA;US)
Numerical simulation of four forward combustion tube experiments using the Tar Sand Triangle resource, 12:45031 (RA;US)
Waste Water
Water characterization and treatment, 12:45067 (RA;US)
IN-SITU GASIFICATION
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)
Borehole Linking
Gasification of bituminous coal, 12:44830 (RA;US)
Cavities
Excavation of the Partial Seam CRIP underground coal gasification test site, 12:44863 (R;US)
Chemical Reaction Kinetics
Effect of pressure on subbituminous coal gasification, 12:44829 (RA;US)
Combined Cycles
Experimental testing of the TREE/sup sm/ process, 12:44827 (RA;US)
Combustion Kinetics
Contaminant control research for in situ thermal recovery processes, 12:44930 (RA;US)
Enhanced recovery of pyrolysis products, 12:44837 (RA;US)
Gasification of bituminous coal, 12:44830 (RA;US)
Postburn evaluation of the Hanna Iva and B UCG experiments, Wyoming, 12:44832 (RA;US)
Combustion Properties
Postburn evaluation of the Hanna Iva and B UCG experiments, Wyoming, 12:44832 (RA;US)
Combustion Waves
Postburn evaluation of the Hanna Iva and B UCG experiments, Wyoming, 12:44832 (RA;US)
Computerized Simulation
Comparison of forward combustion gasification models, 12:44828 (RA;US)
Environmental Effects
Baseline evaluation of the hydrogeology and ground water quality of the proposed RM1 UCG site, Hanna, Wyoming, 12:44925 (RA;US)
Biological treatability and phenol degradation studies performed with UCG condensate and affected ground waters, 12:44926 (RA;US)
Contaminant control research for in situ thermal recovery processes, 12:44930 (RA;US)
Environmental site evaluation - Hanna, 12:44923 (RA;US)
Ground water transport model development, 12:44929 (RA;US)
Hoe Creek underground coal gasification site, 12:44931 (RA;US)
Hydrological testing at the Tono II UCG site, 12:44924 (RA;US)
Physical-chemical treatment of UCG condensate and affected ground waters, 12:44927 (RA;US)
Underground coal gasification water quality data base, 12:44928 (RA;US)
Environmental Impacts
Underground coal gasification water quality data base, 12:44928 (RA;US)
Field Tests
Excavation of the Partial Seam CRIP underground coal gasification test site, 12:44863 (R;US)
Heat Affected Zone
Results of leaching experiments conducted on samples from the Tono I UCG cavity, 12:44838 (R;US)
Land Reclamation
Hoe Creek underground coal gasification site, 12:44931 (RA;US)
Mathematical Models
Comparison of forward combustion gasification models, 12:44828 (RA;US)
Mission Analysis
Alternative uses for underground coal gasification, 12:44836 (RA;US)
Performance Testing
Postburn evaluation of the Tono I UCG experiment, Centralia, Washington, 12:44833 (RA;US)
Tono II site characterization project, 12:44834 (RA;US)
UCG with steam and oxygen mixtures, 12:44831 (RA;US)
Pressure Effects
Effect of pressure on subbituminous coal gasification, 12:44829 (RA;US)
Process Control
Postburn evaluation of the Tono I UCG experiment, Centralia, Washington, 12:44833 (RA;US)
Tono II site characterization project, 12:44834 (RA;US)
UCG with steam and oxygen mixtures, 12:44831 (RA;US)
Research Programs
Alternative uses for underground coal gasification, 12:44836 (RA;US)
Comparison of forward combustion gasification models, 12:44828 (RA;US)
Enhanced recovery of pyrolysis products, 12:44837 (RA;US)

Gasification of bituminous coal, 12:44830 (RA;US)
Postburn evaluation of the Hanna Iva and B UCG experiments, Wyoming, 12:44832 (RA;US)
Postburn evaluation of the Tono I UCG experiment, Centralia, Washington, 12:44833 (RA;US)
Rocky Mountain I site characterization, 12:44835 (RA;US)
Tono II site characterization project, 12:44834 (RA;US)
Site Selection
Rocky Mountain I site characterization, 12:44835 (RA;US)
Site Surveys
Rocky Mountain I site characterization, 12:44835 (RA;US)
Technology Transfer
Alternative uses for underground coal gasification, 12:44836 (RA;US)
Water Pollution Abatement
Hydrological testing at the Tono II UCG site, 12:44924 (RA;US)
Water Reclamation
Baseline evaluation of the hydrogeology and ground water quality of the proposed RM1 UCG site, Hanna, Wyoming, 12:44925 (RA;US)
Biological treatability and phenol degradation studies performed with UCG condensate and affected ground waters, 12:44926 (RA;US)
Environmental site evaluation - Hanna, 12:44923 (RA;US)
Hoe Creek underground coal gasification site, 12:44931 (RA;US)
Hydrological testing at the Tono II UCG site, 12:44924 (RA;US)

Physical-chemical treatment of UCG condensate and affected ground waters, 12:44927 (RA;US)
IN-SITU RETORTING
Combined Cycles
Experimental testing of the TREE/sup sm/ process, 12:44827 (RA;US)
Environmental Effects
Postburn evaluation of retort 1 at least tract C-a, 12:45027 (RA;US)
Profiling of organic solutes in oil shale by-product waters, 12:45061 (RA;US)
Environmental Impacts
Characterization of waters from retort 1 at least tract C-a, 12:45070 (RA;US)
Heat Sources
Radio-frequency heating of oil shale blocks, 12:45022 (RA;US)
Liquid Wastes
Profiling of organic solutes in oil shale by-product waters, 12:45061 (RA;US)
Oil Yields
Combustion retorting of oil shale at low-void volumes, 12:45021 (RA;US)
Research Programs
Experimental testing of the TREE/sup sm/ process, 12:44827 (RA;US)
Gas tracer analysis on oil shale rubble with permeability contrasts, 12:45025 (RA;US)
Radio-frequency heating of oil shale blocks, 12:45022 (RA;US)
Sweep Efficiency
Combustion retorting of oil shale at low-void volumes, 12:45021 (RA;US)
Gas tracer analysis on oil shale rubble with permeability contrasts, 12:45025 (RA;US)
INSPECTOR GENERAL (US DOE)

Use of a computer controlled flow injection analysis system for the rapid on-line determination of distribution coefficients, 12:45878 (BA;US)
Chemical Reactions
Evaluation of laser desorbed transition-metal ions as analytical chemical ionization reagents by pattern recognition, 12:45870 (J;US)
Solvent Extraction
Use of a computer controlled flow injection analysis system for the rapid on-line determination of distribution coefficients, 12:45878 (BA;US)
X-Ray Spectroscopy
Application of EXAFS spectroelectrochemsitry to structural studies of electroactive species immobilized on polymer coated electrodes, 12:45936 (BA;US)

IRON GARNETS
See FERRITE GARNETS

IRON IONS
Electron-Ion Collisions
Resonance enhancement of electron collision rates for fluorinelike ions, 12:46445 (J;US)
Forbidden Transitions
Effect of deuteron temperature on iron forbidden-line intensities in rf-heated tokamak plasmas, 12:46874 (J;US)

IRON OXIDES
Radioactivity Transport
Comparison of computer code calculations with experimental results obtained in the NSPP series of experiments, 12:45443 (R;US)
Synthesis
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa_2Cu_3O/sub 6.9/, 12:45773 (J;US)

IRON-ALPHA
Electron-Positron Interactions
Study of positron diffusion in solids by positron spin relaxation (e^+ SR) experiments, 12:46751 (RA;DD)

IRRADIATION DEVICES
Design
Development of beta calibration sources at the Pacific Northwest Laboratory, 12:46429 (R;US)

IRRADIATION RIGS
See IRRADIATION DEVICES

IRREDUCIBLE REPRESENTATIONS
Mass
The $m(A1^{++})/m(E^{++})$ mass ratio from lattice gauge theory, 12:46598 (R;US)

IRRIGATION
Environmental Effects
Evaluation of management of water releases for Painted Rocks Reservoir, Bitterroot River, Montana: Final report, 12:45225 (R;US)

ISING MODEL
Fluctuations
Neutron-scattering observations of extreme critical slowing down in a $d = 3$ random-field system, 12:46793 (J;US)
Order Parameters
Neutron-scattering observations of extreme critical slowing down in a $d = 3$ random-field system, 12:46793 (J;US)
Partition Functions
Accurate estimate of ν for the three-dimensional Ising model from a numerical measurement of its partition function, 12:46794 (J;US)

ISONITRILES
Chemical Reactions
Catalytic activation and functionalization of C-H bonds. Aldimine formation by the insertion of isonitriles into aromatic C-H bonds, 12:45934 (J;US)

ISOTOPE ENRICHMENT
See ISOTOPE SEPARATION

ISOTOPE PRODUCTION
Research Programs
Isotope and Nuclear Chemistry Division annual report FY 1986, October 1985-September 1986, 12:45957 (R;US)

ISOTOPE SEPARATION
For separation of isotopes of the same element only.
See also LASER ISOTOPE SEPARATION
Research Programs
Isotope and Nuclear Chemistry Division annual report FY 1986, October 1985-September 1986, 12:45957 (R;US)

ISOTOPES
See also COPPER ISOTOPES
FISSION PRODUCTS
NITROGEN ISOTOPES
RADIOISOTOPES
Measuring Methods
Direct measuring system of radioactivity in the low level drum package, 12:45129 (RA;JP)

ISOTOPIC SEPARATION

LANTHANUM CHLORIDES
LANTHANUM FLUORIDES
LANTHANUM OXIDES
PLZT
Chemical Reactions
Evaluation of laser desorbed transition-metal ions as analytical chemical ionization reagents by pattern recognition, 12:45870 (J;US)
Isotopic Exchange
Observation of an oxygen isotope shift in the superconducting transition temperature of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45787 (J;US)

Transition Temperature
Observation of an oxygen isotope shift in the superconducting transition temperature of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45787 (J;US)

LANTHANUM FLUORIDES
Sputtering
Ion-assisted deposition of lanthanum fluoride thin films, 12:45786 (J;US)

LANTHANUM OXIDES
Absorption Spectra
Soft x-ray absorption studies on high-T/sub c/ superconducting oxides, 12:45782 (J;US)
Atom Transport
Oxygen-vacancy behavior in La/sub 2-//sub x/Sr/sub x/CuO/sub 4-//sub y/ by positron annihilation and oxygen diffusion, 12:45778 (J;US)
Coatings
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Electron Collisions
Inverse photoemission studies of the empty electronic states and surface stability of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45780 (J;US)
Electronic Structure
Inverse photoemission studies of the empty electronic states and surface stability of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45780 (J;US)
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Passivation
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Photoelectron Spectroscopy
Oxygen withdrawal, copper valency, and interface reaction for Fe/La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45781 (J;US)
Photoemission
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Photon Emission
Inverse photoemission studies of the empty electronic states and surface stability of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45780 (J;US)
Sorptive Properties
Oxygen withdrawal, copper valency, and interface reaction for Fe/La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45781 (J;US)
Superconductivity
Electrical properties of high T/sub c/ superconductors under high pressures (LaBaCuO, LaSrCuO, YBaCuO), 12:45813 (R;US)
Magnetic studies of high T/sub c/ superconducting (La/sub 0.9/Sr/sub 0.1/)$_2$CuO/sub 4-y/, 12:45789 (J;US)
Soft x-ray absorption studies on high-T/sub c/ superconducting oxides, 12:45782 (J;US)
Thermodynamic Properties
Thermodynamic properties of Ln-Cu-O (Ln = La, Pr, Nd, Sm, Eu) systems, 12:45769 (RA;SU;In Russian)
Vacancies
Oxygen-vacancy behavior in La/sub 2-//sub x/Sr/sub x/CuO/sub 4-//sub y/ by positron annihilation and oxygen diffusion, 12:45778 (J;US)

LAPLACE OPERATOR
See LAPLACIAN

LAPLACIAN

Thermonuclear Reactor Materials
ICF applications, 12:46926 (RA;US)

LASER ISOTOPE SEPARATION
Beam Dynamics
Transverse and dispersion effects in the simultaneous propagation of short different-wavelength pulses in three-level absorbers, 12:45181 (BA;US)
Energy Consumption
Consideration of a laser enrichment module: Module characteristics from the viewpoint of energy consumption, 12:45079 (TG;US)

LASER MATERIALS
Blue-green laser-diode research program. Revision. Quarterly Progress report No. 4, 1 January-31 March 1987, 12:45998 (R;US)
Cladding
Edge-cladding glasses for solid-state laser garnet crystals, 12:45827 (J;US)
Coatings
Compressive coatings on optical components for improving mechanical durability and increasing strength, 12:46012 (BA;US)
Damage
Time to failure in single-pulse laser-induced damage, 12:46026 (BA;US)
Excitation
Physical chemistry of energetic nitrides. Final report, 1 November 1983-30 April 1987, 12:45997 (R;US)
Optical Properties
Compressive coatings on optical components for improving mechanical durability and increasing strength, 12:46012 (BA;US)
Laser research and development, 12:46925 (RA;US)
Physical Properties
Laser research and development, 12:46925 (RA;US)
Physical Radiation Effects
Time to failure in single-pulse laser-induced damage, 12:46026 (BA;US)
Tensile Properties
Compressive coatings on optical components for improving mechanical durability and increasing strength, 12:46012 (BA;US)

LASER MIRRORS
Design
Sideband suppression by an intracavity optical filter in the Los Alamos free-electron laser oscillator, 12:46007 (R;US)
Spectral Response
Sideband suppression by an intracavity optical filter in the Los Alamos free-electron laser oscillator, 12:46007 (R;US)
Testing
Sideband suppression by an intracavity optical filter in the Los Alamos free-electron laser oscillator, 12:46007 (R;US)

LASER RADIATION
Absorption
Noncollisional absorption of femtosecond laser pulses in plasmas by nonlinear forces, 12:46941 (BA;US)
Instability
Models of high spatial frequency thermal blooming instabilities, 12:45966 (R;US)
Measuring Methods
Method for single-shot measurement of picosecond laser pulse-lengths without electronic time dispersion, 12:46008 (R;US)
Physical Radiation Effects
Average-power 1064-nm laser-induced damage testing at Lawrence Livermore National Laboratory, 12:46025 (BA;US)
Time to failure in single-pulse laser-induced damage, 12:46026 (BA;US)

LASER TARGETS
Beam Profiles
Theory of induced spatial incoherence, 12:46934 (J;US)
Computerized Simulation
Studies of new geometries for x-ray lasers, 12:46006 (RA;US)

Design
Target design, 12:46920 (RA;US)
Fabrication
Target development and fabrication, 12:46921 (RA;US)
Geometry
Studies of new geometries for x-ray lasers, 12:46006 (RA;US)
Laser-Produced Plasma
Experiments and diagnostics, 12:46922 (RA;US)
Microscopy
X-ray microscopy of inertial fusion targets using a laser-produced plasma as an x-ray source, 12:46004 (RA;US)

LASER-PRODUCED PLASMA
Laser-plasma-interaction experiments using multikilojoule lasers, 12:46931 (R;US)
Brillouin Effect
Brillouin scattering measurements from plasmas irradiated with spatially and temporally incoherent laser light, 12:46882 (J;US)
Coherent Scattering
Stimulated Raman scattering in self-focused light filaments in laser-produced plasmas, 12:46881 (J;US)
Electron Temperature
TuFF4. Half-integer harmonic emission from laser plasmas as a coronal temperature diagnostic, 12:46896 (J;US)
Energy Absorption
TuFF3. Self-focusing in underdense ultraviolet laser-produced plasmas, 12:46942 (J;US)
Energy Conversion
Experimental study of laser-supported plasmas for laser propulsion: Center director's discretionary fund project DFP-82-33. Final report, 12:45689 (R;US)
Focusing
TuFF3. Self-focusing in underdense ultraviolet laser-produced plasmas, 12:46942 (J;US)
Integral Transformations
Abel inversion using transform techniques, 12:46940 (BA;US)
Ion Temperature
TuFF4. Half-integer harmonic emission from laser plasmas as a coronal temperature diagnostic, 12:46896 (J;US)
Plasma Diagnostics
Noncollisional absorption of femtosecond laser pulses in plasmas by nonlinear forces, 12:46941 (BA;US)
Plasma Instability
Target design, 12:46920 (RA;US)
Raman Effect
Enhanced noise and Raman scattering in plasma, 12:46906 (R;US)
Stimulated Raman scattering in self-focused light filaments in laser-produced plasmas, 12:46881 (J;US)
Two-Dimensional Calculations
Abel inversion using transform techniques, 12:46940 (BA;US)
X-Ray Spectra
Time-resolved measurements of short-wavelength fluorescence from x-ray-excited ions, 12:46449 (J;US)

LASL
Nuclear Materials Management
DYMAC - The first stab at large safeguards systems, 12:45180 (J;US)
Safeguards from the operators viewpoint, 12:45178 (J;US)
Research Programs
Isotope and Nuclear Chemistry Division annual report FY 1986, October 1985-September 1986, 12:45957 (R;US)
Safeguards
DYMAC - The first stab at large safeguards systems, 12:45180 (J;US)
Low level detection in safeguards and verification, 12:45170 (J;US)
Safeguards at Los Alamos: 20 years, 12:45172 (J;US)
Safeguards R and D at Los Alamos: The first 20 years, 12:45175 (J;US)
Safeguards R and D at Los Alamos: The next 20 years, 12:45176 (J;US)
Safeguards from the operators viewpoint, 12:45178 (J;US)
Water Supply
Water supply at Los Alamos during 1986: Progress report, 12:46234 (R;US)

LATE RADIATION EFFECTS
See DELAYED RADIATION EFFECTS

LATTICE DEFECTS
See CRYSTAL DEFECTS

LATTICE FIELD THEORY
Chiral Symmetry
Studies of chiral symmetry in a spontaneously broken lattice gauge theory, 12:46623 (BA;US)
Computer Calculations
Status of the UCLA project for lattice calculation of weak matrix elements, 12:46576 (BA;US)
Status of the Columbia lattice parallel processor project, 12:46624 (BA;US)
Weak interaction matrix elements with staggered fermions, 12:46577 (BA;US)
Glueballs
QCD glueballs in the presence of dynamcial fermions in a small periodic box, 12:46570 (J;NL)
Irreducible Representations
The $m(A1^{++})/m(E^{++})$ mass ratio from lattice gauge theory, 12:46598 (R;US)
Matrix Elements
Status of the UCLA project for lattice calculation of weak matrix elements, 12:46576 (BA;US)
Monte Carlo Method
Status of the Columbia lattice parallel processor project, 12:46624 (BA;US)
Scaling Laws
Finite size scaling and lattice gauge theory, 12:46599 (R;US)
SU-2 Groups
Finite size scaling and lattice gauge theory, 12:46599 (R;US)
SU-3 Groups
Finite size scaling and lattice gauge theory, 12:46599 (R;US)
Symmetry Breaking
Studies of chiral symmetry in a spontaneously broken lattice gauge theory, 12:46623 (BA;US)
Weak Interactions
Weak interaction matrix elements with staggered fermions, 12:46577 (BA;US)

LATTICES (CRYSTAL)
See CRYSTAL LATTICES

LAWRENCE BERKELEY LABORATORY
Research Programs
Lie-transformed Vlasov action principle: relativistically covariant wave propagation and self-consistent ponderomotive effects, 12:47008 (J;NL)
Nuclear Science Division: Annual report for the period October 1, 1985-September 30, 1986, 12:46649 (R;US)

LAWRENCE LIVERMORE LABORATORY
Remedial Action
Preliminary report of the past and present uses, storage, and disposal of hazardous materials at the Lawrence Livermore National Laboratory, 12:45140 (R;US)
Sanitary Landfills
Hydrogeologic investigation, Lawrence Livermore National Laboratory Site 300, Pit 6, 12:46236 (R;US)
Transportation Systems
Lawrence Livermore National Laboratory: Transportation and vehicle utilization study, 12:45670 (R;US)
Van de Graaff Accelerators
Integral measurements and calculations of neutron and gamma-ray emission at 14 MeV and an overview of the new multi-user tandem at LLNL, 12:46932 (R;US)

LAYERS
See also BOUNDARY LAYERS
Turbine Blades
Guide to the control of high temperature corrosion and protection of gas turbine materials, 12:45718 (R;DE)

LEACHATES
Chemical Analysis
Characteristics of leachates from retorted oil shales, 12:45062 (RA;US)
Oxidation-reduction and leachate chemistry of restored oil shale, 12:45064 (RA;US)
Chemical Composition
Results of leaching experiments conducted on samples from the Tono I UCG cavity, 12:44838 (R;US)

Environmental Transport
Characteristics of leachates from retorted oil shales, 12:45062 (RA;US)
Oxidation-reduction and leachate chemistry of restored oil shale, 12:45064 (RA;US)

LEACHING
Mathematical Models
Leaching of saltstone: Laboratory and field testing and mathematical modeling, 12:45119 (R;US)

LEAD
Air Pollution
Morton arboretum bioassays: earthworm bioassay procedures to evaluate the extent of aerially dispersed lead and cadmium in an urban arboretum, 12:46160 (R;NL)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Impact Shock
Rarefaction velocities in shocked lead, 12:46739 (R;US)
Machining
Machining lead wafers, 12:45727 (R;US)
Nitrogen 14 Reactions
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
Photonuclear Reactions
Absolute photoneutron cross sections for Zr, I, Pr, Au, and Pb, 12:46669 (J;US)
Proton Reactions
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
Quantity Ratio
Lead and cadmium contents in the odontolith of workers of a cement factory, 12:46309 (R;DE;In German)
Separation Processes
Analytical Chemistry, 12:45953 (RA;ZA)

LEAD 207 TARGET
Neutron Reactions
Annual progress report on nuclear data, 1986, 12:46678 (R;BE)

LEAD 208 TARGET
Nuclear Quadrupole Resonance
Isospin structure of giant resonances from pion inelastic scattering, 12:46664 (J;US)
Pion Reactions
Isospin structure of giant resonances from pion inelastic scattering, 12:46664 (J;US)

LEAD ALLOYS
Electron-Positron Interactions
Effects of lattice anisotropy on positron parameters in In-Pb alloys, 12:46758 (RA;DD)

LEAD COMPOUNDS
See also PLZT
PZT
Chemical Preparation
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Chemical Reaction Kinetics
Use of a computer controlled flow injection analysis system for the rapid on-line determination of distribution coefficients, 12:45878 (BA;US)
Crystal Growth
Crystal growth, phase transformation studies, and micro-cracking in single crystal lead titanate, 12:45797 (BA;US)
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Growth and dielectric properties of lead barium niobate single crystals and morphotropic phase boundary, 12:45796 (BA;US)
Crystal-Phase Transformations
Crystal growth, phase transformation studies, and micro-cracking in single crystal lead titanate, 12:45797 (BA;US)
Dielectric Properties
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Dielectric aging effects in doped lead magnesium niobate: Lead titanate relaxor ferroelectric ceramics, 12:45804 (BA;US)
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Growth and dielectric properties of lead barium niobate single crystals and morphotropic phase boundary, 12:45796 (BA;US)
Low-temperature fired lead magnesium niobate, 12:45795 (BA;US)
Piezoelectricity
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Pyroelectric Effect
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Sintering
Low-temperature fired lead magnesium niobate, 12:45795 (BA;US)
Solvent Extraction
Use of a computer controlled flow injection analysis system for the rapid on-line determination of distribution coefficients, 12:45878 (BA;US)
Temperature Effects
Dielectric aging effects in doped lead magnesium niobate: Lead titanate relaxor ferroelectric ceramics, 12:45804 (BA;US)

LEAD ZIRCONITE TITANATE
See PZT

LEAD-ACID BATTERIES
Results of a wind turbine/sealed lead-acid battery experiment, 12:45305 (R;US)
Hydrides
Hydride generation from the Exide load-leveling cells, 12:45519 (R;US)
Production
New type sealed lead-acid battery F-Act, 12:45528 (R;JP)
Ventilation
Hydride generation from the Exide load-leveling cells, 12:45519 (R;US)

LEAK TESTING
Standardization
Revision of the ANSI N14.5 leak-test standard, 12:45992 (BA;XA)

LEAKAGE
See LEAKS

LEAKS
Monitoring
Survey of vendors of external petroleum-leak -monitoring devices for use with underground storage tanks. Project report, 12:44985 (R;US)
Water Pollution Monitors
Processes affecting subsurface transport of leaking underground-storage-tank fluids, 12:46225 (R;US)

LEGISLATION
Economic Impact
Coal markets and utilities' compliance decisions: Final report (Site specific response and its cost), 12:44963 (R;US)
Recommendations
Natural gas: time for a comprehensive solution, 12:45573 (RA;US)

LEGISLATIVE PROGRAMS
See LEGISLATION

LEPTON NUMBER
Search for rare muon and pion decay modes with the crystal box detector, 12:46522 (BA;US)

LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET

LEPTONIC DECAY
Electromagnetic Form Factors
First observation of the decay π/sup +/$\rightarrow$e/sup +/e/sup -/e/sup +/ν and A determination of the formfactors F/sub V/, F/sub A/ and R, 12:46575 (BA;US)

LEPTONS
See also ELECTRONS

HEAVY LEPTONS
NEUTRINOS
Mass
Search for close-mass lepton pairs (L^-,L^0), 12:46512 (R;US)
Pair Production
Search for close-mass lepton pairs (L^-,L^0), 12:46512 (R;US)
Particle Structure
Substructure: A brief summary, 12:46574 (BA;US)
Weak Particle Decay
CP violation and weak decays of quarks and leptons, 12:46596 (BA;US)

LI-DRIFTED SI DETECTORS
Design
Semiconductor detector performance for low-energy x-rays, 12:46130 (R;US)
Performance
Semiconductor detector performance for low-energy x-rays, 12:46130 (R;US)

LIE GROUPS
See also GRADED LIE GROUPS
POINCARE GROUPS
Algebra
Cartan determinants, LIE algebra extensions, and the exceptional group series, 12:46839 (BA;US)
Classification
Cartan determinants, LIE algebra extensions, and the exceptional group series, 12:46839 (BA;US)
Irreducible Representations
Cartan determinants, LIE algebra extensions, and the exceptional group series, 12:46839 (BA;US)

LIE SUPERALGEBRA
See GRADED LIE GROUPS

LIGANDS
Carbonylation
Mechanistic studies of carbon monoxide reduction: Progress report, January 1, 1985-June 1, 1987, 12:45904 (R;US)

LIGHT GUIDES
See OPTICAL FIBERS

LIGHT PIPES
Computerized Simulation
LIGHT: A ray tracing code to simulate light collection in scintillation spectrometers and light pipes, 12:46120 (R;US)

LIGHT TRANSMISSION
Computerized Simulation
LIGHT: A ray tracing code to simulate light collection in scintillation spectrometers and light pipes, 12:46120 (R;US)
L Codes
LIGHT: A ray tracing code to simulate light collection in scintillation spectrometers and light pipes, 12:46120 (R;US)

LIGHT WATER COOLED REACTORS
See WATER COOLED REACTORS

LIGHT WATER MODERATED REACTORS
See WATER MODERATED REACTORS

LIGHTING SYSTEMS
Control Systems
Building design: Impact on the lighting control system for a daylighting strategy, 12:45656 (R;US)
Energy Consumption
Indirect lighting in office buildings, 12:45657 (R;FI;In Finnish)
Energy Efficiency
Energy-efficient lighting system for television, 12:45664 (P;US)
Power Supplies
Electricity consumption in schools, 12:45662 (R;DK;In Danish)

LIGNITE
Small Angle Scattering
Role of porosity in supercritical fluid extraction of coal: Technical progress report, 12:44853 (R;US)
Supercritical Gas Extraction
Role of porosity in supercritical fluid extraction of coal: Technical progress report, 12:44853 (R;US)

LIME-LIMESTONE WET SCRUBBING PROCESSES
Experimental study of gas use to improve the limestone-injection process for SO_2 control on utility boilers. Topical report, November 1985-September 1986, 12:45325 (R;US)
Technology Assessment
Flue gas desulphurization by lime/limestone processes in the Federal Republic of Germany, 12:44895 (R;XU)

LIMESTONE
Sorptive Properties
Studies on the reaction of calcined limestone with sulfur dioxide: Technical progress report for the period April-June 1987, 12:44884 (R;US)

LIMITERS
Cleaning
Conditioning of the graphite bumper limiter for enhanced confinement discharges in TFTR, 12:46917 (R;US)
Power Transmission
Power transport to the poloidal divertor experiment scoop limiter, 12:46938 (J;US)

LINACS
See LINEAR ACCELERATORS

LINEAR ACCELERATORS
See also LAMPF LINAC
STANFORD LINEAR COLLIDER
Beam Emittance
Summary of Working Group on Storage Ring Collective Effects, 12:46068 (R;US)
Computer-Aided Design
Trajectory vs. PIC methods in diode design, 12:46088 (R;US)
Design
A high-power rf linear accelerator for FELS [free-electron lasers], 12:46059 (R;US)
Feasibility Studies
A high-power rf linear accelerator for FELS [free-electron lasers], 12:46059 (R;US)
Meetings
Proceeding of the 11th meeting on linear accelerators, 12:46057 (R;JP;In Japanese)

LINEAR PROGRAMMING
Algorithms
The Box Method for linear programming: Part 2, Treatment of problems in standard form with explicitly bounded variables, 12:46990 (R;US)

LIQUID ASPHALT
See PETROLEUM RESIDUES

LIQUID EFFLUENTS
See LIQUID WASTES

LIQUID FUELS
See also FUEL OILS
GASOLINE
Refining
Fuel treatment, 12:44910 (R;XU)
Sprays
Integrated approach to spray-combustion model development. Report for October 1985-October 1986, 12:45959 (R;US)
Transient spray-combustion computations. Report for October 1985-October 1986, 12:45960 (R;US)

LIQUID METAL COOLANT
See LIQUID METALS

LIQUID METAL COOLED REACTORS
See also JOYO REACTOR
LMFBR TYPE REACTORS
Design
Nuclear reactor construction with bottom supported reactor vessel, 12:45372 (P;US)
Reactor Vessels
Nuclear reactor construction with bottom supported reactor vessel, 12:45372 (P;US)

LIQUID METAL TEST FACILITIES
See TEST FACILITIES

LIQUID METALS
Casting
Horizontal electromagnetic casting of thin metal sheets, 12:45754 (P;US)
Chemical Reaction Kinetics
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)
Computerized Simulation
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)

Heat Transfer
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)

LIQUID SCINTILLATION DETECTORS
Design
Liquid argon time projection chamber, 12:46105 (RA;US)
Neutrino Detection
Prototype study on the detection of neutrino-induced event signatures in the range of 5-50 MeV in the large scintillation detector KARMEN 1, 12:46113 (R;DE;In German)
Performance
Liquid argon time projection chamber, 12:46105 (RA;US)

LIQUID WASTES
See also WASTE WATER
Chemical Analysis
Separation and detection of sulfur, nitrogen, and arsenic species in oil shale by-product waters using ion chromatography, 12:45060 (RA;US)
Chemical Composition
Separation and detection of sulfur, nitrogen, and arsenic species in oil shale by-product waters using ion chromatography, 12:45060 (RA;US)
Chemical Properties
Methods for geochemical model evaluation, 12:45066 (RA;US)
Environmental Transport
Leaching of retorted oil shale with complexometric agents, 12:45063 (RA;US)
Filtration
Physical-chemical treatment of UCG condensate and affected ground waters, 12:44927 (RA;US)
Grouting
Long-term performance assessment of grouted phosphate/sulfate waste from N Reactor operations, 12:45132 (R;US)
Quantitative Chemical Analysis
Methods for geochemical model evaluation, 12:45066 (RA;US)
Solvent Extraction
Physical-chemical treatment of UCG condensate and affected ground waters, 12:44927 (RA;US)
Water Treatment
Physical-chemical treatment of UCG condensate and affected ground waters, 12:44927 (RA;US)
Retort water characterization and evaluation of treatment methods, 12:45071 (RA;US)

LIQUIDS
See also COAL LIQUIDS
LIQUID METALS
Photoacoustic Effect
Pulse shapes of nanosecond photoacoustic signals in liquids detected by piezoelectric foil, 12:46134 (J;US)
Thermoelasticity
Pulse shapes of nanosecond photoacoustic signals in liquids detected by piezoelectric foil, 12:46134 (J;US)

LITEK LAMP
See FLUORESCENT LAMPS

LITHIUM
Chemical Reaction Kinetics
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)
Heat Transfer
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)
Neutron Transport
Annual progress report on nuclear data, 1986, 12:46678 (R;BE)
Photoionization
Lithium 1s main-line and satellite photoemission: Resonant and nonresonant behavior, 12:46442 (J;US)
Transport
Analysis and predictions of water and solute transport in a large lysimeter, 12:46227 (RA;US)
Finite element simulation of moisture movement and solute transport in a large caisson, 12:46230 (RA;US)
Simulation of ion movement in soil using a continuous-time Markov process, 12:46228 (RA;US)
Time and frequency domain analysis of tracer migration in crushed tuff, 12:46229 (RA;US)

LITHIUM 7 TARGET
Pion Plus Reactions
Mass dependence of pion single-charge exchange to the isobaric analog state at 20 MeV, 12:46658 (J;US)

LITHIUM CHLORIDES
Crystallization
Thermodynamic study of LiCl-CsCl-H_2O system, 12:45930 (RA;SU;In Russian)

LITHIUM HYDRIDES
Chemical Reaction Kinetics
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)
Heat Transfer
Solutions of steady-state and unsteady-state equations on the IBM-PC simulating heat transfer and chemical reaction across a gas-liquid film, 12:46020 (BA;US)

LITHIUM IONS
Ion-Atom Collisions
Emission-line profiles of helium autoionization states after excitation by fast Li and He ions, 12:46443 (J;US)

LIVER
Biological Radiation Effects
Hepatobiliary kinetics after whole-body irradiation, 12:46276 (R;US)
Cytochrome Oxidase
Incorporation of haemoglobin haem into the rat hepatic haemoproteins tryptophan pyrrolase and cytochrome P-450, 12:46266 (R;US)
Tryptophan Oxygenase
Incorporation of haemoglobin haem into the rat hepatic haemoproteins tryptophan pyrrolase and cytochrome P-450, 12:46266 (R;US)

Specific absorbed fractions of energy at various ages from internal photon sources: 3, Five-year-old, 12:46716 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 4, Ten-year-old, 12:46717 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 1, Methods, 12:46714 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 5, Fifteen-year-old male and adult female, 12:46718 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 6, Newborn, 12:46719 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 7, Adult male, 12:46720 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 2, One-year-old, 12:46715 (R;US)
Radiation Doses
Specific absorbed fractions of energy at various ages from internal photon sources: 3, Five-year-old, 12:46716 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 4, Ten-year-old, 12:46717 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 1, Methods, 12:46714 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 5, Fifteen-year-old male and adult female, 12:46718 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 6, Newborn, 12:46719 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 7, Adult male, 12:46720 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 2, One-year-old, 12:46715 (R;US)

LUTETIUM 176
E1-Transitions
Dipole strength functions in the actinide mass region, 12:46679 (R;US)

LUTETIUM ALLOYS
Solution Heat
Solution enthalpy of ytterbium and lutetium in germanium, 12:45719 (RA;SU;In Russian)

LWR TYPE REACTORS
See WATER COOLED REACTORS

LYSINE
Biological Functions
Site-directed mutagenesis of lysine-329 of ribulose bisphosphate carboxylase/oxygenase from Rhodospirillum rubrum, 12:46247 (J;US)
Cross-Linking
Effect of cross linkers on the bacteriorhodopsin photocycle, 12:46241 (J;US)

M

M1-TRANSITIONS
Magnetic dipole transitions.
Interacting Boson Model
M1 transitions between collective levels and F-spin purity, 12:46685 (R;US)

MA 754
See NICKEL BASE ALLOYS

MA 956
See IRON BASE ALLOYS

MACHINE TRANSLATIONS
Errors
Errors associated with Russian name transliteration, 12:46946 (R;US)
Evaluation
All translations are not created equal, 12:46947 (R;US)

MACHINERY
See also TURBOMACHINERY
Mechanical Vibrations
Utility machinery vibration monitoring guide: Final report, 12:45394 (R;US)

MAGIC NUCLEI
Double Beta Decay
Theory of double beta decay, 12:46703 (BA;US)

MAGIC NUMBERS
See MAGIC NUCLEI

MAGMA
Tomography
High resolution seismic attenuation tomography at Medicine Lake Volcano, California, 12:46335 (R;US)

MAGNESIUM
Antiproton Reactions
Observation of antiproton annihilation in heavy nuclei at 100 GeV/c, 12:46660 (R;US)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)

MAGNESIUM 24
Energy-Level Density
Spectral distribution calculations of the level density of /sup 24/Mg, 12:46698 (J;US)

MAGNESIUM 26 TARGET
Titanium 48 Reactions
Quasi-elastic transfer and charge-exchange reactions in collisions of /sup 48/Ti on /sup 42/Ca and /sup 26/Mg, 12:46662 (R;DE;In German)

MAGNESIUM ALLOYS
De Haas-Van Alphen Effect
Electronic structure of ordered intermetallic compounds Cd/sub 3/Mg and Mg/sub 3/Cd, 12:46735 (R;SU;In Russian)

Experimental study of the de Haas-van Alphen effect in the intermetallic compound Cd/sub 3/Mg, 12:46734 (R;SU;In Russian)
Electronic Structure
Electronic structure of ordered intermetallic compounds Cd/sub 3/Mg and Mg/sub 3/Cd, 12:46735 (R;SU;In Russian)
Experimental study of the de Haas-van Alphen effect in the intermetallic compound Cd/sub 3/Mg, 12:46734 (R;SU;In Russian)
Order-Disorder Transformations
Positron study of the order-disorder transition in an $MgCd_3$ alloy, 12:46761 (RA;DD)

MAGNESIUM COMPOUNDS
See also MAGNESIUM FLUORIDES
Dielectric Properties
Dielectric aging effects in doped lead magnesium niobate: Lead titanate relaxor ferroelectric ceramics, 12:45804 (BA;US)
Low-temperature fired lead magnesium niobate, 12:45795 (BA;US)
Sintering
Low-temperature fired lead magnesium niobate, 12:45795 (BA;US)
Temperature Effects
Dielectric aging effects in doped lead magnesium niobate: Lead titanate relaxor ferroelectric ceramics, 12:45804 (BA;US)

MAGNESIUM FLUORIDES
Fabrication
Porous halide antireflective coatings for adverse environments, 12:45849 (BA;US)
Refractivity
Porous halide antireflective coatings for adverse environments, 12:45849 (BA;US)

MAGNET COILS
Fabrication
Fabrication of the new poloidal field coils for DIII-D, 12:46908 (R;US)
Performance Testing
Studies of a flexible heliac configuration, 12:46860 (R;US)
Power Generation
TF & PF magnet power conversion, 12:46904 (R;US)
Testing
Fabrication of the new poloidal field coils for DIII-D, 12:46908 (R;US)

MAGNET CORES
Design
Fusion reactor physics and technology studies: Final report, December 1, 1985 to June 15, 1986, 12:46907 (R;US)

MAGNETIC COILS
See MAGNET COILS

MAGNETIC DIPOLE TRANSITIONS
See M1-TRANSITIONS

MAGNETIC FIELDS
Calculation Methods
Magnetic measurements on the X-17 superconducting wiggler, 12:46078 (R;US)
Computer Calculations
Field mapping of M1 magnet using GFUN3D magnet design program, 12:46066 (R;US)

MAGNETIC MIRROR TYPE REACTORS
See also TMR REACTORS
Design
Magnetic mirror fusion systems: Characteristics and distinctive features, 12:46933 (R;US)

MAGNETIC MONOPOLES
Monopoles, cosmology, and astrophysics - Update 1985, 12:46391 (J;US)
Particle Identification
Searches for monopoles and quarks, 12:46519 (BA;US)

MAGNETIC PERMEABILITY
See MAGNETIC SUSCEPTIBILITY

MAGNETIC REFRIGERATORS
Adiabatic Demagnetization
Numerical experiments on /sup 3/He refrigeration by adiabatic demagnetization of copper, 12:45972 (R;SU;In Russian)

MAGNETIC SEPARATORS
Bench-Scale Experiments
Bench-scale magnetic separation of Department of Energy wastes, 12:45854 (R;US)

MAGNETIC SPECTROMETERS
Design
An approximately 4π tracking magnetic spectrometer for RHIC, 12:46104 (R;US)
Performance
An approximately 4π tracking magnetic spectrometer for RHIC, 12:46104 (R;US)
Projection Spark Chambers
An approximately 4π tracking magnetic spectrometer for RHIC, 12:46104 (R;US)

MAGNETIC STORMS
Solar Wind
Application of the blast waves in the solar wind concept to major interplanetary shocks during the Solar Maximum Year (SMY), 12:46349 (R;US)
Sudden Commencements
Kilometric Type-II radiation from interplanetary shocks: interpretation of Voyager results, 12:46351 (R;US)

MAGNETIC SURFACES
Mapping
Magnetic surface mapping with highly transparent screens on the Auburn Torsatron, 12:46846 (R;US)

MAGNETIC SUSCEPTIBILITY
Mathematical Models
Calculation of specific heat and susceptibilities with the use of the Trotter approximation, 12:46792 (J;US)

MAGNETOHYDRODYNAMICS
Research Programs
[Plasma properties: Annual report], 12:46849 (R;US)

MAGNETOSPHERE
See EARTH MAGNETOSPHERE

MAGNETOTAIL
Particle Kinematics
Joint NASA/Goddard-University of Maryland research program in charged particle and high energy photon detector technology. Semiannual progress report, September 1986-March 1987, 12:46369 (R;US)

MAHOGANY TREES
See TREES

MAINTENANCE
Cost
Indirect lighting in office buildings, 12:45657 (R;FI;In Finnish)

MALES
Specific absorbed fractions of energy at various ages from internal photon sources: 7, Adult male, 12:46720 (R;US)
Adolescents
Specific absorbed fractions of energy at various ages from internal photon sources: 5, Fifteen-year-old male and adult female, 12:46718 (R;US)

MALIGNANCIES
See NEOPLASMS

MAMMARY GLANDS
Carcinomas
Radiation carcinogenesis: time-dose relationships, 12:46301 (J;US)

MANGANESE ALLOYS
Phase Studies
Kinetics of phase separation in Mn/sub 0.67/Cu/sub 0.33/, 12:45752 (J;US)
Physical Radiation Effects
Neutron irradiation of Fe-Mn, Fe-Cr-Mn and Fe-Cr-Ni alloys and an explanation of their differences in swelling behavior, 12:45757 (J;NL)
Swelling
Neutron irradiation of Fe-Mn, Fe-Cr-Mn and Fe-Cr-Ni alloys and an explanation of their differences in swelling behavior, 12:45757 (J;NL)

MANGANESE CHLORIDES
Enthalpy
Determination of thermodynamic values of liquid and vapor from measurements of total saturated vapor pressure, 12:45921 (RA;SU;In Russian)

Vapor Pressure
Determination of thermodynamic values of liquid and vapor from measurements of total saturated vapor pressure, 12:45921 (RA;SU;In Russian)

MANGANESE COMPOUNDS
Antiferromagnetism
Neutron scattering study on the magnetic excitations in Mn_3Si, 12:46724 (R;US)
Entropy
Entropy and enthalpy of formation of $Mn_2Mo_3O_8$ and $MnMoO_4$ evaluated from TG-measurements under controlled oxygen pressure, 12:45918 (RA;SU)
Formation Heat
Entropy and enthalpy of formation of $Mn_2Mo_3O_8$ and $MnMoO_4$ evaluated from TG-measurements under controlled oxygen pressure, 12:45918 (RA;SU)

MAN-MACHINE SYSTEMS
Computerized Simulation
Integrated operator-plant process modeling and decision support for allocation of function, 12:45392 (R;US)
Manipulators
A methodology for dynamic task allocation in a man-machine system, 12:45963 (R;US)

MANUFACTURING
Computerized Control Systems
Electrotechnologies: Potential for improving manufacturing productivity: Final report, 12:45566 (R;US)

MANUFACTURING FACILITIES
See INDUSTRIAL PLANTS

MANURES
Anaerobic Digestion
Generation of gases from biomass by anaerobic digestion and their practical utilization as fuel, 12:45188 (R;GB)

MANY-BODY PROBLEM
See also THREE-BODY PROBLEM
Many-body processes in atomic and molecular physics: Technical progress report, September 1, 1986 through August 31, 1987, 12:46410 (R;US)

MARCOULE PHENIX REACTOR
See PHENIX REACTOR

MARINE DISPOSAL
Radionuclide Migration
Fate and bioaccumulation of soil-associated low-level naturally occurring radioactivity following disposal into a marine ecosystem. Final report, 12:46232 (R;US)

MARINE ECOSYSTEMS
See AQUATIC ECOSYSTEMS

MARINE VEHICLE ACCIDENTS
See ACCIDENTS

MARKET
Economic Analysis
Economic analysis of oil market projections and supply disruption scenarios (Effect of price difference, etc., in forecast data), 12:45582 (RA;US)

MARKET PENETRATION
See MARKETING RESEARCH

MARKET SHARES

Biological gasification of renewable resources. Annual report, March 1984-February 1985, 12:45205 (R;US)
Biomass conversion pilot plant of the Federal Institute for Agricultural Technology, Wieselburg, 12:45193 (RA;DE;In German)
Methane digestion laboratory tests in different media, 12:45200 (RA;DE;In German)
Microbiological analyses of methanogenic bacteria, 12:46262 (RA;DE;In German)
Tissue-culture investigations into mechanisms of biomass enhancement. Annual report, June 1985-July 1986, 12:45245 (R;US)
Biotechnology
Applied microbiology and biogas technology, 12:45198 (RA;DE;In German)
Combustion Kinetics
Thermographic observation of hydrocarbon oxygen explosions, 12:46154 (BA;US)
Desorption
Mine gas as feed for a PSA-unit producing substitute natural gas resp. enriched methane. Final report, 12:44820 (R;DE;In German)
Enrichment
Mine gas as feed for a PSA-unit producing substitute natural gas resp. enriched methane. Final report, 12:44820 (R;DE;In German)
Environmental Impacts
Outer Continental shelf environmental assessment program. Final reports of principal investigators. Volume 51, 12:45003 (R;US)
Production and dispersion of dissolved methane in southeastern Bering Sea. Final report, 12:45004 (R;US)
Infrared Thermography
Thermographic observation of hydrocarbon oxygen explosions, 12:46154 (BA;US)

Oxidation
Basic research on natural gas combustion phenomena--catalytic combustion. Annual report 1986. Report for 15 January 1986-14 January 1987, 12:45015 (R;US)
Partial Oxidation Processes
Partial oxidation of light alkanes in transition-metal ion containing zeolites, 12:44855 (R;US)
Production
Importance of agricultural biomass conversion, 12:45204 (RA;DE;In German)
Quantitative Chemical Analysis
Simple analyses for biomass conversion plants, 12:45199 (RA;DE;In German)
Thermal Cracking
Clean carbon and hydrogen fuels from coal and other carbonaceous raw materials (HYDROCARB process), 12:45186 (R;US)
Uses
'Spitzer' biomass conversion plant, 12:45192 (RA;DE;In German)
Technology and economy of different biogas uses, 12:45194 (RA;DE;In German)
Yields
Experimental studies on catch fuel crops. Annex 4: catch crop utilization, 12:45189 (R;GB)

METHANOGENIC BACTERIA
Biological Adaptation
Microbiological analyses of methanogenic bacteria, 12:46262 (RA;DE;In German)
Biological Availability
Microbiological analyses of methanogenic bacteria, 12:46262 (RA;DE;In German)

METHANOL
Chemical Reaction Kinetics
Chemical Kinetic Data Base for Combustion Chemistry. Part 2. Methanol, 12:45962 (J;US)
Combustion
Chemical Kinetic Data Base for Combustion Chemistry. Part 2. Methanol, 12:45962 (J;US)
Pyrolysis
Chemical Kinetic Data Base for Combustion Chemistry. Part 2. Methanol, 12:45962 (J;US)
Regeneration
Regeneration of refrigerated methanol in conditioning gases from coal. Final report, June 1984-October 1985, 12:44861 (R;US)
Solvent Properties
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)
Synthesis
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)

METHANOTROPHIC BACTERIA
Detection
Detection of a microbial consortium, including type 2 methanotrophs, by use of phospholipid fatty acids in an aerobic halogenated hydrocarbon-degrading soil column enriched with natural gas, 12:46226 (R;US)

METHYL ALCOHOL
See METHANOL

METHYL IODIDE
Investigations on the influence of combustion products on the retention of radioiodine by activated carbons, 12:45422 (R;DE;In German)

METHYL VIOLOGEN
See BIPYRIDINES

METHYLBENZENE
See TOLUENE

METHYLENE CHLORIDE
Environmental Exposure
Exposure to methylene chloride from controlled use of a paint remover in residences, 12:46166 (R;US)

METHYL-FUEL
See ALCOHOLS
METHANOL

METROPOLITAN AREAS
See URBAN AREAS

MEXICO
Uranium Deposits
Uranium deposits associated to tertiary acid volcanism of the Pena Blanca Sierra (Chihuahua, Mexico), 12:45074 (R;FR;In French)

MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Alarm Systems
Alarm points for fixed oxygen monitors, 12:46930 (R;US)

MHD EQUILIBRIUM
G Codes
Recent improvements to the GATO MHD [magnetohydrodynamics] stability package, 12:46855 (R;US)
Mapping
Recent improvements to the GATO MHD [magnetohydrodynamics] stability package, 12:46855 (R;US)
Mathematical Models
Recent improvements to the GATO MHD [magnetohydrodynamics] stability package, 12:46855 (R;US)

MICE
Biological Radiation Effects
Developmental and teratogenic effects of 2450-MHz microwaves in mice. Final report, 12:46325 (R;US)
Urinary excretion of cyclic nucleotides, creatinine prostaglandin E2 and thromboxane B2 from mice exposed to whole-body irradiation from an enhanced neutron field, 12:46271 (R;US)
Embryos
Developmental and teratogenic effects of 2450-MHz microwaves in mice. Final report, 12:46325 (R;US)
Fetuses
Developmental and teratogenic effects of 2450-MHz microwaves in mice. Final report, 12:46325 (R;US)

MICELLAR-POLYMER FLOODING
See MICROEMULSION FLOODING

MICROBIAL ENHANCED OIL RECOVERY
See MICROBIAL EOR

MICROBIAL EOR
Bench-Scale Experiments
Contracts for field projects and supporting research on enhanced oil recovery: Progress review No. 47, Quarter ending June 1986, 12:44977 (R;US)

MICROEARTHQUAKES
Data Analysis
Identification of MHF [massive hydraulic fracturing] fracture planes and flow paths: A correlation of well log data with patterns in locations of induced seismicity, 12:45287 (R;US)
Pattern Recognition
A new method for determining fluid flow paths during hydraulic fracturing, 12:44981 (R;US)

MICROEMULSION FLOODING
Bench-Scale Experiments
Contracts for field projects and supporting research on enhanced oil recovery: Progress review No. 47, Quarter ending June 1986, 12:44977 (R;US)
Field Tests
Contracts for field projects and supporting research on enhanced oil recovery: Progress review No. 47, Quarter ending June 1986, 12:44977 (R;US)

MICROSCOPY
See also ION MICROSCOPY
Resolution
X-ray microscopy of inertial fusion targets using a laser-produced plasma as an x-ray source, 12:46004 (RA;US)

MICROSEISM
See SEISMIC NOISE

MICROWAVE EQUIPMENT
See also MICROWAVE TUBES
Deaerators
Portable deaerator for deionized water systems, 12:46087 (R;US)

MICROWAVE RADIATION
Biological Radiation Effects
Biological applications and effects of optical masers. Annual report, 16 March 1985-15 March 1986, 12:46324 (R;US)
Developmental and teratogenic effects of 2450-MHz microwaves in mice. Final report, 12:46325 (R;US)
MICROWAVE TUBES
Design
Theory and simulation of high-power microwave generation in a magnetically insulated transmission line oscillator, 12:46037 (J;US)
Microwave Power Transmission
Theory and simulation of high-power microwave generation in a magnetically insulated transmission line oscillator, 12:46037 (J;US)
Plasma Instability
Theory and simulation of high-power microwave generation in a magnetically insulated transmission line oscillator, 12:46037 (J;US)
Simulation
Theory and simulation of high-power microwave generation in a magnetically insulated transmission line oscillator, 12:46037 (J;US)
MIDDLE EAST
See also TURKEY
Pipelines
International energy actions, 12:45581 (RA;US)
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILITARY FACILITIES
Waste Disposal
Wastewater characterization and hazardous-waste survey, Hickam AFB, Hawaii. Final report, 13-27 January 1987, 12:46214 (R;US)
Waste Water
Wastewater characterization survey, Plattsburgh AFB, New York. Final report, 12:46215 (R;US)
MILITARY PERSONNEL
Radiation Doses
Analysis of radiation exposure for personnel on the residence islands of Enewetak Atoll after Operation Greenhouse, 1951-1952. Technical report, 3 December 85-20 April 1987, 12:46155 (R;US)
MILITARY STRATEGY
Space: the fourth military dimension. The Strategic Defense Initiative and the implications for land warfare in the twenty-first century. Final report, 12:45710 (R;US)
MILK
Transfrontier Contamination
Consequences of the Chernobyl reactor accident for the Munich area, 12:46204 (R;DE;In German)
MILL TAILINGS
Radioassay
Bioassay for uranium mill tailings, 12:46191 (BA;US)
Radon 222
Final rule for radon-222 emissions from licensed uranium mill tailings - economic analysis. Final report, 12:45152 (R;US)
MILLSTONE-3 REACTOR
Waterford, Connecticut, USA
Meltdown
Effect of plant design on aerosol release from corium-concrete interaction, 12:45475 (RA;US)
MINE HAULAGE
Computerized Control Systems
Computer-based coal clearance for a multi-mine complex, 12:44944 (R;XE)
MINE ROADWAYS
Strata Control
Review of a proposed development for the east districts at Lingan Colliery, 12:44939 (R;CA)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERAL OIL
See LUBRICANTS
MINERALIZATION
Reaction Kinetics
Precipitation kinetics option for the EQ6 geochemical reaction path code (Glossary included), 12:46339 (R;US)
MINERS
See also COAL MINERS
Injuries
Injury experience in metallic mineral mining, 1985, 12:44967 (R;US)
MINES
See also COAL MINES
Accidents
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1984, 12:44966 (R;US)
Inspection
Annual report of the Secretary of Labor under the Federal Mine Safety and Health Act of 1977, Fiscal Year 1984, 12:44966 (R;US)
MINING
See also OIL SHALE MINING
SURFACE MINING
UNDERGROUND MINING
Accidents
Injury experience in metallic mineral mining, 1985, 12:44967 (R;US)
MINING EQUIPMENT
Electrical Equipment
Electricity and technical progress: The bituminous coal mining industry, mechanization to automation, 12:44948 (R;US)
Evaluation
Reliability prediction techniques, 12:44945 (R;XE)
Materials
Advanced Research and Technology Development Fossil Energy Materials Program, 12:45712 (R;US)
Materials Testing
Advanced Research and Technology Development Fossil Energy Materials Program, 12:45712 (R;US)
Reliability
Reliability prediction techniques, 12:44945 (R;XE)
MIRROR FUSION TEST FACILITY
See MFTF DEVICES
MIRRORS
See also LASER MIRRORS
Design
Design of a long trace surface profiler, 12:45968 (R;US)
Gradient index retroreflector, 12:45996 (P;US)
Fabrication
Design of a long trace surface profiler, 12:45968 (R;US)
Physical Radiation Effects
All-metal resonator designs for visible/near-infrared free-electron laser oscillators, 12:46039 (BA;US)
Surfaces
Design of a long trace surface profiler, 12:45968 (R;US)
MISGURNUS
See FISHES
MITOSIS
Molecular Biology
Repair of DNA treated with λ-irradiation and chemical carcinogens: Progress report, 1983-1987, 12:46239 (R;US)
MOCHOVCE-1 REACTOR
Reactor Monitoring Systems
Automated monitoring system for technical diagnostics, 12:45409 (RA;CS;In Czech)
In-service diagnostic system for Mochovce nuclear power plant, 12:45410 (RA;CS;In Czech)
MODELS (COSMOLOGICAL)
See COSMOLOGICAL MODELS
MODELS (FLOW)
See FLOW MODELS
MODELS (MATHEMATICAL)
See MATHEMATICAL MODELS
MODELS (PARTICLE)
See PARTICLE MODELS
MODELS (PLASMA)
See PLASMA SIMULATION

MODULAR COGENERATION POWER PLANTS
See DUAL-PURPOSE POWER PLANTS
MOLECULAR BEAMS
Resonance Ionization Mass Spectroscopy
Double optical resonance mass selective detection of aromatic molecules in a supersonic molecular beam, 12:45869 (J;US)
MOLECULAR CRYSTALS
Crystal Defects
Defects in molecular solids, 12:46755 (RA;DD)
MOLECULAR FLUORESCENCE SPECTROSCOPY
See FLUORESCENCE SPECTROSCOPY
MOLECULAR SIEVES
Sorptive Properties
Mine gas as feed for a PSA-unit producing substitute natural gas resp. enriched methane. Final report, 12:44820 (R;DE;In German)
MOLECULAR STRUCTURE
Coupling Constants
Structural chemistry, 12:45902 (RA;ZA)
Crystallography
Structural chemistry, 12:45902 (RA;ZA)
Nuclear Magnetic Resonance
Structural chemistry, 12:45902 (RA;ZA)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Performance
The effects of halides on the performance of coal gas-fueled molten carbonate fuel cell: Semi-annual report, October 1986-March 1987, 12:45595 (R;US)
Separation Processes
Survey of the advanced gas separation membrane technology and its possible applications to electric power industry, 12:44824 (R;JP;In Japanese)
MOLTEN SALT COOLANTS
See MOLTEN SALTS
MOLTEN SALTS
Electric Conductivity
Electronic conduction in molten sodium chloride (As function of Na activity at 850 and 900°C), 12:45940 (R;US)
MOLYBDATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Entropy
Entropy and enthalpy of formation of $Mn_2Mo_3O_8$ and $MnMoO_4$ evaluated from TG-measurements under controlled oxygen pressure, 12:45918 (RA;SU)
Formation Heat
Entropy and enthalpy of formation of $Mn_2Mo_3O_8$ and $MnMoO_4$ evaluated from TG-measurements under controlled oxygen pressure, 12:45918 (RA;SU)
Formation enthalpy of gaseous indium and thallium molybdates and thallium tungstate, 12:45925 (RA;SU;In Russian)
MOLYBDENUM
Catalytic Effects
Catalytic methods for improved coal liquefaction and hydrotreating: Quarterly report No. 7 for the period March 23, 1987 through June 22, 1987, 12:44851 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 April-30 June 1985, 12:44846 (R;US)
Improved coal liquefaction using carbon-supported hydrogenation catalysts: Quarterly report for the period 1 January 1985-31 March 1985, 12:44845 (R;US)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
MOLYBDENUM ALLOYS
See also STAINLESS STEEL-316
Aging
Microstructural evolution and response to double-loop reactivation testing of heat-treated pH 13-8 Mo martensitic stainless steel, 12:45737 (R;US)
Intergranular Corrosion
Microstructural evolution and response to double-loop reactivation testing of heat-treated pH 13-8 Mo martensitic stainless steel, 12:45737 (R;US)
Microstructure
Microstructural evolution and response to double-loop reactivation testing of heat-treated pH 13-8 Mo martensitic stainless steel, 12:45737 (R;US)
Precipitation Hardening
Microstructural evolution and response to double-loop reactivation testing of heat-treated pH 13-8 Mo martensitic stainless steel, 12:45737 (R;US)
MOLYBDENUM COMPOUNDS
See also MOLYBDATES
Separation Processes
Analytical Chemistry, 12:45953 (RA;ZA)
MOLYBDENUM IONS
Electron-Ion Collisions
Resonance enhancement of electron collision rates for fluorinelike ions, 12:46445 (J;US)
MONGRELS

MONITORS
Accuracy
Optical power line voltage and current measurement systems: Volume 1, Limits to the precision of electro-optic and magneto-optic sensors: Final report, 12:45329 (R;US)
Design
Optical power line voltage and current measurement systems: Volume 1, Limits to the precision of electro-optic and magneto-optic sensors: Final report, 12:45329 (R;US)
Technology Assessment
Approaches to optical fibre based gas sensing in underground coal mines, 12:44934 (R;AU)
MONITORS (REACTOR)
See REACTOR CONTROL SYSTEMS
MONJU REACTOR
Tsuruga, Fukui, Japan
Cover Gas
Argon cover gas purity control on LMFBR, 12:45353 (RA;XE)
MONOCHLOROETHYLENE
See VINYL CHLORIDE
MONOCHROMATORS
Fabrication
Multilayer monochromators for neutron spectrometers, 12:46103 (R;US)
Performance
Multilayer monochromators for neutron spectrometers, 12:46103 (R;US)
MONOCLONAL ANTIBODIES
Enzyme Immunoassay
Vertical spectrophotometry for measuring antibodies to a variety of microbes using a microimmunoenzymatic assay on a flat surface, 12:46263 (J;US)
Spectrophotometry
Vertical spectrophotometry for measuring antibodies to a variety of microbes using a microimmunoenzymatic assay on a flat surface, 12:46263 (J;US)
MONOPOLES
See also MAGNETIC MONOPOLES
Radiation Effects
Soft photon radiation effects in monopole processes, 12:46601 (R;XA)
MONTANA
Rivers
Evaluation of management of water releases for Painted Rocks Reservoir, Bitterroot River, Montana: Final report, 12:45225 (R;US)

MONTE CARLO METHOD
Computer Calculations
Status of the Columbia lattice parallel processor project, 12:46624 (BA;US)
Uses
Monte Carlo method and its application in the experimental particle physics, 12:46971 (R;HU;In Hungarian)
MOON
Lithology
Investigation of lunar crustal structure and isostasy. Final technical report, 12:46377 (R;US)
MOS TRANSISTORS
Metal Oxide Silicon transistors.
Physical Radiation Effects
Development of a theoretical model for annealing of radiation damage in semiconductor devices. Quarterly report, 8 March-8 June 1987, 12:45814 (R;US)
MOTORS
Design
Design verification tests for an axial gap permanent magnet compressor motor, 12:45973 (R;US)
Process support compressor motor electromagnetic design summary, 12:45974 (R;US)
Testing
Design verification tests for an axial gap permanent magnet compressor motor, 12:45973 (R;US)
MT ST HELENS
Seismicity
CSDP: The seismology of continental thermal regimes: Final report for period April 1, 1986-April 1, 1987, 12:46332 (R;US)
MULTICHARGED IONS
Ions with charge 3 and above. Coordinate the above descriptor with a descriptor for the specific ion.
Energy Levels
Simple formula for the energies of doubly excited states, 12:46461 (J;NL)
MULTIGROUP THEORY
Boltzmann Equation
Multigroup particle transport in a moving material, 12:46709 (J;US)
MULTI-PHOTON PROCESSES
Theory of multiphoton ionization, 12:46435 (R;US)
Quantum Mechanics
Quantum-mechanical aspects of classically chaotic driven systems, 12:46425 (R;US)
MULTIPLE PRODUCTION
The stochastic cell model for hadronic multiparticle distributions, 12:46580 (BA;US)
Multiplicity
Poisson-type multiplicity distribution and the Giovannini-Van Hove model, 12:46568 (J;DE)
MULTIPROCESSING
See PARALLEL PROCESSING
MULTIPROCESSORS
See ARRAY PROCESSORS
MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS
MULTIWIRE PROPORTIONAL CHAMBERS
See also DRIFT CHAMBERS
X-Ray Diffractometers
One-dimensional positron-sensitive detector for X-ray studies at superhigh pressures, 12:46116 (R;SU;In Russian)
MUNICIPAL WASTES
Anaerobic Digestion
Biofuels and municipal waste technology research program summary: FY 1986, 12:45230 (R;US)
Hazardous Materials
Superfund Record of Decision (EPA Region 1): Tinkham Garage, Londonderry, New Hampshire, September 1986. Final report, 12:46237 (R;US)
Superfund Record of Decision (EPA Region 4): Pioneer Sand Company, Warrington, Florida, September 1986. Final report, 12:46209 (R;US)
Superfund Record of Decision (EPA Region 5): Arrowhead Refinery, Duluth, Minnesota, September 1986. Final report, 12:46210 (R;US)
Pyrolysis
Municipal solid waste resource assessment for energy recovery in Idaho, 12:45568 (R;US)
Thermochemical Processes
Biofuels and municipal waste technology research program summary: FY 1986, 12:45230 (R;US)
MUNITIONS
See ORDNANCE
MUON NEUTRINOS
Coupling Constants
The determination of the weak neutral current coupling constants and limits on the electromagnetic properties of the muon neutrino, 12:46502 (R;US)
Electromagnetic Interactions
The determination of the weak neutral current coupling constants and limits on the electromagnetic properties of the muon neutrino, 12:46502 (R;US)
Neutral-Current Interactions
The determination of the weak neutral current coupling constants and limits on the electromagnetic properties of the muon neutrino, 12:46502 (R;US)
Neutrino Oscillation
The search for neutrino oscillations in the appearance mode nu/sub μ/ $\rightarrow$ nu/sub e/ for neutrino energies near the muon threshold, 12:46503 (R;US)
MUONIUM
Density
Superdense muonic matter, 12:46419 (R;US)
MUONS PLUS
Electromagnetic Form Factors
Search for rare muon and pion decay modes with the crystal box detector, 12:46522 (BA;US)
Radiative Decay
Search for rare muon and pion decay modes with the crystal box detector, 12:46522 (BA;US)
MUSTARD
See BRASSICA
MUTAGENESIS
Specificity
Mutational specificity of SOS mutagenesis, 12:46291 (RA;JP;In Japanese)
MUTAGENS
Health Hazards
Health assessment of exposure to developmental toxicants, 12:45543 (R;US)
Uptake
Mutagenicity in Salmonella of hazardous wastes and urine from rats fed these wastes, 12:46317 (R;US)
MWPC
See MULTIWIRE PROPORTIONAL CHAMBERS
MX DEVICES
See MFTF DEVICES
MYLAR
Positron Collisions
Electron-positron pair creation in heavy ion collisions and Bhabha scattering in the MeV range, 12:46420 (R;DE)

N

NAI DETECTORS
Calibration Standards
Fast calibration of a flat 3 x 3 inches NaI(T1) detector for gamma counting of various geometries, by use of a point-source calibration curve, 12:46115 (RA;IL)
NAL SYNCHROTRON
See FERMILAB ACCELERATOR
NAPAP
National surface water survey: Eastern Lake Survey, Phase 1 (ELS-1), 1984 (for microcomputers). Data file, 12:46223 (R;US)
Data Base Management

NATURAL GAS
Catalytic Combustors
Basic research on natural gas combustion phenomena--catalytic combustion. Annual report 1986. Report for 15 January 1986-14 January 1987, 12:45015 (R;US)
Combustion Properties
Basic research on natural gas combustion phenomena--catalytic combustion. Annual report 1986. Report for 15 January 1986-14 January 1987, 12:45015 (R;US)
Consumption Rates
Natural gas: time for a comprehensive solution, 12:45573 (RA;US)
Realizing coal's potential, 12:45574 (RA;US)
Supporting analysis for world energy outlook (Forecasting to 1995; EIA OMS models; global aspects), 12:45564 (RA;US)
Supporting analysis for US energy outlook (Forecasting to 1995), 12:45565 (RA;US)
World energy outlook: Economic and security implications, 12:45571 (RA;US)
Physical Properties
Development of an equation of state for computation of supercompressibility factors, critical flow factors, and other properties for wet, sour natural gases, sythetic gases and admixtures. Annual report, October 1985-September 1986, 12:45014 (R;US)
Molecular theory and computer-simulation studies of natural and synthetic gas mixtures. Final report, January 1, 1983-December 31, 1986, 12:45013 (R;US)
Prices
Electric and gas rates and fuel oil prices in 18 representative US cities, 1985. Topical report, August 1985-June 1986, 12:45538 (R;US)
US hard coal mining - a study with special regard to the terms of delivery valid for industrial coal exports to the Federal Republic of Germany, 12:45585 (R;DE;In German)
World energy outlook: Economic and security implications, 12:45571 (RA;US)
Production
Natural gas: time for a comprehensive solution, 12:45573 (RA;US)
Supporting analysis for US energy outlook (Forecasting to 1995), 12:45565 (RA;US)
Pumping
Simulation of the transient performance of a compressor in a natural gas pumping station, 12:45012 (RA;GB)
Reserves
Natural gas: time for a comprehensive solution, 12:45573 (RA;US)
Thermodynamic Properties
Molecular theory and computer-simulation studies of natural and synthetic gas mixtures. Final report, January 1, 1983-December 31, 1986, 12:45013 (R;US)
Underground Storage
Feasibility analysis and development of a foam-protected underground natural gas storage facility, 12:45016 (R;US)

NATURAL GAS DEPOSITS
Enhanced Recovery
Acoustic and dielectric properties and network models of tight-gas sandstones. Annual report, July 1985-June 1986, 12:45010 (R;US)
Exploration
Circulation and water masses in the Gulf of Alaska. Final report, 12:46341 (R;US)
Offshore Drilling
Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS), 12:44972 (R;US)
Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS). Volume 1. Executive summary. Final report, 9 January 1984-18 February 1986, 12:44973 (R;US)
Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS). Volume 2. Technical report. Final report, 9 January 1984-18 February 1986, 12:44974 (R;US)
Physical oceanographic study of Florida's Atlantic coast region - Florida Atlantic Coast Transport Study (FACTS). Volume 3. Appendices. Final report, 9 January 1984-18 February 1986, 12:44975 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise, 12:44968 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise. Volume 1. Executive summary. Final report, September 1983-May 1987, 12:44969 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise. Volume 2. Technical presentation. Final report, September 1983-May 1987, 12:44970 (R;US)
Study of physical processes on the US Mid-Atlantic Continental Slope and Rise. Volume 3. Appendix. Final report, September 1983-May 1987, 12:44971 (R;US)
Offshore Operations
Alaska statewide and regional economic and demographic systems: effects of OCS (Outer Continental Shelf) exploration and development, 1985. Social and economic studies program technical report Number 115. Final report, 12:44976 (R;US)
Sandstones
Acoustic and dielectric properties and network models of tight-gas sandstones. Annual report, July 1985-June 1986, 12:45010 (R;US)

NATURAL GAS DISTRIBUTION SYSTEMS
Gas Compressors
Simulation of the transient performance of a compressor in a natural gas pumping station, 12:45012 (RA;GB)

NATURAL GAS GATHERING SYSTEMS
See NATURAL GAS DISTRIBUTION SYSTEMS

NATURAL GAS INDUSTRY
Offshore Operations
Managing oil and gas operations on the Outer Continental Shelf, 12:44982 (R;US)
Regulations
Natural gas: time for a comprehensive solution, 12:45573 (RA;US)

NATURAL GAS PROCESSING PLANTS
Gas Compressors
Design, testing and commissioning of the reinjection centrifugal compressors for the Alrar gas treatment plant, 12:45008 (RA;GB)
Stretford Process
Stretford process status and R and D needs. Topical report, 12:45009 (R;US)

NATURAL GASOLINE PLANTS
See NATURAL GAS PROCESSING PLANTS

NATURAL LANGUAGE
Restricted to computer technology.
Identification Systems
Foreign language identification: First step in the translation process, 12:46948 (R;US)

Quantitative Chemical Analysis
Fiber optic sensor engineering: no trivial matter, 12:45882 (BA;US)
NEPTUNIUM
Absorption Spectroscopy
Case studies of fiber optic sensors in process analysis, 12:45890 (BA;US)
Fluorescence Spectroscopy
Case studies of fiber optic sensors in process analysis, 12:45890 (BA;US)
NEPTUNIUM 237
Decay
Annual progress report on nuclear data, 1986, 12:46678 (R;BE)
NEPTUNIUM 237 TARGET
Neutron Reactions
Dipole strength functions in the actinide mass region, 12:46679 (R;US)
Photonuclear Reactions
Dipole strength functions in the actinide mass region, 12:46679 (R;US)
NETHERLANDS
Pollution Regulations
Recent developments in low cost flue gas desulphurization systems in the Netherlands, 12:44912 (R;XU)
NETWORKS (COMPUTER)
See COMPUTER NETWORKS
NEUTRAL ATOM BEAM INJECTION
ICR Heating
Time evolution of the velocity distribution of neutral beam injections heated by ICRH in a two component plasma, 12:46844 (R;SE)
NEUTRALIZATION (PHYSICAL)
See RECOMBINATION
NEUTRETTOS
See MUON NEUTRINOS
NEUTRINO BEAMS
Radiation Flux
Focusing horn upgrades, 12:46079 (RA;US)
Neutrino flux calculations for the AGS Narrow Band Beam, 12:46080 (RA;US)
NEUTRINO DETECTION
Design of phonon detectors for neutrinos, 12:46109 (R;US)
Calorimeters
The use of rotons in liquid helium to detect neutrinos, 12:46111 (R;US)
Cherenkov Counters
Sudbury neutrino observatory, 12:46107 (RA;US)
Experiment Planning
Matter oscillations and solar neutrinos: A review of the MSW effect, 12:46526 (BA;US)
Resonant neutrino oscillations within the solar interior, 12:46525 (BA;US)
Liquid Scintillation Detectors
Liquid argon time projection chamber, 12:46105 (RA;US)
Research Programs
Matter oscillations and solar neutrinos: A review of the MSW effect, 12:46526 (BA;US)
Resonant neutrino oscillations within the solar interior, 12:46525 (BA;US)
Shower Counters
Physics calibration of the Soudan II nucleon decay experiment using BNL neutrinos, 12:46106 (RA;US)
NEUTRINO OSCILLATION
Effects of the third generation on neutrino oscillations in vacuum and matter, 12:46547 (RA;US)
Future long baseline nu/sub μ/ → nu/sub e/ oscillation searches at accelerators, 12:46497 (RA;US)
Implications of the observed K-M angles on future physics, 12:46579 (BA;US)
Limit on tau neutrino mass, 12:46528 (BA;US)
Matter oscillations: neutrino transformation and regeneration in the earth, 12:46549 (RA;US)
Neutrino oscillations in BEBC, 12:46495 (RA;US)
Resonant solar neutrino oscillation versus laboratory neutrino oscillation experiments, 12:46548 (RA;US)
Search for neutrino oscillations, 12:46492 (RA;US)
Search for neutrino oscillations at the AGS with the narrow band beam, 12:46493 (RA;US)
Search for nu/sub μ/ → nu/sub e/ oscillations using the E734 detector, 12:46494 (RA;US)
Searches for neutrino oscillations, 12:46496 (RA;US)
Sudbury neutrino observatory, 12:46107 (RA;US)
Limiting Values
The search for neutrino oscillations in the appearance mode nu/sub μ/ → nu/sub e/ for neutrino energies near the muon threshold, 12:46503 (R;US)
Research Programs
[Search for neutrino oscillation and measurement of neutrino-nucleus cross sections]: Technical progress report, 15 January 1987 through 15 July 1987, 12:46506 (R;US)
Matter oscillations and solar neutrinos: A review of the MSW effect, 12:46526 (BA;US)
Resonant neutrino oscillations within the solar interior, 12:46525 (BA;US)
The U.C. Irvine mobile neutrino-oscillation experiment, 12:46527 (BA;US)
Reviews
Matter oscillations and solar neutrinos: A review of the MSW effect, 12:46526 (BA;US)
Neutrino oscillations at accelerators past results, future prospects, 12:46491 (RA;US)
Neutrino physics - a theoretical perspective, 12:46546 (RA;US)

Summary and conclusions, 12:46500 (RA;US)
NEUTRINO REACTIONS
Research Programs
[Search for neutrino oscillation and measurement of neutrino-nucleus cross sections]: Technical progress report, 15 January 1987 through 15 July 1987, 12:46506 (R;US)

NEUTRON REACTIONS
Capture
Dipole strength functions in the actinide mass region, 12:46679 (R;US)
Spin-spin and isospin interactions from capture measurements, 12:46655 (R;US)
Cross Sections
Measurement of /sup 67/Zn (n,α) /sup 64/Ni reaction thermal cross section and its interpretation in the framework of the Reich-Moore multilevel formalism, 12:46665 (R;SU;In Russian)
Elastic Scattering
Energy dependence of the optical-model potential for fast-neutron scattering from bismuth, 12:46677 (J;US)
Fission
Annual progress report on nuclear data, 1986, 12:46678 (R;BE)
Gamma Spectra
Integral measurements and calculations of neutron and gamma-ray emission at 14 MeV and an overview of the new multi-user tandem at LLNL, 12:46932 (R;US)
J-J Coupling
Spin-spin aad isospin interactions from capture measurements, 12:46655 (R;US)
Neutron Spectra
Integral measurements and calculations of neutron and gamma-ray emission at 14 MeV and an overview of the new multi-user tandem at LLNL, 12:46932 (R;US)
NEUTRON SPECTROMETERS
Monochromators
Multilayer monochromators for neutron spectrometers, 12:46103 (R;US)
Performance
Multilayer monochromators for neutron spectrometers, 12:46103 (R;US)
NEUTRON SPECTROSCOPY
Portable Equipment
A portable measurement system for subcriticality measurements by the CF-source-driven neutron noise analysis method, 12:46108 (R;US)
NEUTRON TRANSPORT
CP Invariance
T-violating effects in neutron physics and CP-violation in gauge models, 12:46592 (R;US)
P Invariance
T-violating effects in neutron physics and CP-violation in gauge models, 12:46592 (R;US)
T Invariance
T-violating effects in neutron physics and CP-violation in gauge models, 12:46592 (R;US)
NEUTRONS
See also THERMAL NEUTRONS
Biological Radiation Effects
Urinary excretion of cyclic nucleotides, creatinine prostaglandin E2 and thromboxane B2 from mice exposed to whole-body irradiation from an enhanced neutron field, 12:46271 (R;US)
Radiation Streaming
Analysis of the FNS streaming experiment with albedo Monte Carlo method, 12:46915 (RA;JP)
RBE
Neutron RBEs and the radiosensitive target for mouse immature oocyte killing, 12:46302 (J;US)
Small Angle Scattering
Applications and limitations of deuterium labeling methods to neutron scattering studies of polymers, 12:45806 (R;US)
NEVADA TEST SITE
Radiometric Surveys
An aerial radiological survey of Areas 12, 15, 17 and 19, Nevada Test Site: Date of survey: October-November 1984, 12:45122 (R;US)
NEW MEXICO
See also JEMEZ MOUNTAINS
Urban Areas
The Albuquerque winter visibility study: Volume 2, Data appendices, 12:46179 (R;US)
NEW YORK CITY
Air Pollution
Application of the urban airshed model to the New York metropolitan area, 12:46169 (R;US)
NEWTON MECHANICS
See CLASSICAL MECHANICS
NICKEL
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)

Environmental Transport
Kinetics and mechanisms of the release of trace inorganic contaminants to ground water from coal ash basins on the Savannah River Plant: Progress report, September 29, 1986-September 30, 1987, 12:46199 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Nitrogen 14 Reactions
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
Physical Radiation Effects
Interaction between defects and the formation of dissipative structures in irradiated impure crystals, 12:45726 (R;SU;In Russian)

NICKEL 58 TARGET
Pion Minus Reactions
Elastic scattering of 30 MeV positive and negative pions from nickel isotopes, 12:46663 (J;US)
Pion Plus Reactions
Double charge exchange to the double isobaric analog state at T/sub π/—292 MeV, 12:46661 (J;US)
Elastic scattering of 30 MeV positive and negative pions from nickel isotopes, 12:46663 (J;US)

NICKEL 60 TARGET
Pion Minus Reactions
Elastic scattering of 30 MeV positive and negative pions from nickel isotopes, 12:46663 (J;US)
Pion Plus Reactions
Elastic scattering of 30 MeV positive and negative pions from nickel isotopes, 12:46663 (J;US)

NICKEL 64 TARGET
Pion Minus Reactions
Elastic scattering of 30 MeV positive and negative pions from nickel isotopes, 12:46663 (J;US)
Pion Plus Reactions
Elastic scattering of 30 MeV positive and negative pions from nickel isotopes, 12:46663 (J;US)

NICKEL ALLOYS
See also NICKEL BASE ALLOYS
Absorption Spectra
Extended x-ray-absorption fine-structure study of amorphous (Ni/sub x/Pt/sub 100-//sub x/)/sub 75/P/sub 25/ alloys, 12:45745 (J;US)
Electronic Structure
Electronic properties of the half-metallic ferromagnetic NiUSn, 12:45747 (J;US)
Order-Disorder Transformations
Possible influence of order-disorder transformations on the swelling of 85Ni-15Cr nichrome alloy, 12:45756 (J;NL)
Pairing Interactions
Supercell total energy approach to transition metal alloy pair interactions, 12:46802 (J;US)
Physical Radiation Effects
Neutron irradiation of Fe-Mn, Fe-Cr-Mn and Fe-Cr-Ni alloys and an explanation of their differences in swelling behavior, 12:45757 (J;NL)
Neutron irradiation scoping study of twenty-five copper-base materials, 12:45751 (J;US)
Possible influence of order-disorder transformations on the swelling of 85Ni-15Cr nichrome alloy, 12:45756 (J;NL)
Swelling
Neutron irradiation of Fe-Mn, Fe-Cr-Mn and Fe-Cr-Ni alloys and an explanation of their differences in swelling behavior, 12:45757 (J;NL)
Possible influence of order-disorder transformations on the swelling of 85Ni-15Cr nichrome alloy, 12:45756 (J;NL)
X-Ray Spectra
Extended x-ray-absorption fine-structure study of amorphous (Ni/sub x/Pt/sub 100-//sub x/)/sub 75/P/sub 25/ alloys, 12:45745 (J;US)

NICKEL BASE ALLOYS
Crystal Structure
Solid-solution strengthening: Substitution of V in Ni_3Al and structural stability of $Ni_3(Al,V)$, 12:45743 (J;US)
Electronic Structure
Solid-solution strengthening: Substitution of V in Ni_3Al and structural stability of $Ni_3(Al,V)$, 12:45743 (J;US)
Neutron Spectroscopy
Neutron and x-ray scattering studies of premartensitic phenomena, 12:46725 (R;US)
Phase Transformations
Neutron and x-ray scattering studies of premartensitic phenomena, 12:46725 (R;US)
X-Ray Diffraction
Neutron and x-ray scattering studies of premartensitic phenomena, 12:46725 (R;US)

NICKEL COMPLEXES
Supercritical Fluid Chromatography
Separation of metal-containing compounds by supercritical fluid chromatography, 12:45863 (J;US)

NICKEL-CADMIUM BATTERIES
Battery Charging
New type high-capacity Ni-Cd battery Pananica (SM30), 12:45529 (R;JP)
Capacitance
New type high-capacity Ni-Cd battery Pananica (SM30), 12:45529 (R;JP)

NIGHTGLOW
See AIRGLOW

NIOBATES
Specific compounds should be indexed by coordination of a descriptor in the form (CATION) COMPOUNDS and the above anion descriptor.
Chemical Preparation
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Crystal Growth
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Growth and dielectric properties of lead barium niobate single crystals and morphotropic phase boundary, 12:45796 (BA;US)
Dielectric Properties
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Dielectric aging effects in doped lead magnesium niobate: Lead titanate relaxor ferroelectric ceramics, 12:45804 (BA;US)
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Growth and dielectric properties of lead barium niobate single crystals and morphotropic phase boundary, 12:45796 (BA;US)
Low-temperature fired lead magnesium niobate, 12:45795 (BA;US)
Piezoelectricity
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Pyroelectric Effect
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Sintering
Low-temperature fired lead magnesium niobate, 12:45795 (BA;US)
Temperature Effects
Dielectric aging effects in doped lead magnesium niobate: Lead titanate relaxor ferroelectric ceramics, 12:45804 (BA;US)

NIOBIUM
Crystal Growth
Critical behavior of hydrogen in Nb/Ta superlattices, 12:45838 (J;US)
Superlattices
Critical behavior of hydrogen in Nb/Ta superlattices, 12:45838 (J;US)

NIOBIUM CHLORIDES
Formation Heat
Formation enthalpy of niobium tetrachloride, 12:45915 (RA;SU;In Russian)
Solution Heat
Thermochemistry of products of interaction of niobium and tantalum pentachlorides with ethanol, 12:45912 (RA;SU;In Russian)
Sublimation Heat
Sublimation heat of niobium tetrachloride, 12:45920 (RA;SU;In Russian)
NIOBIUM COMPLEXES
Pyrolysis
Thermochemistry of products of interaction of niobium and tantalum pentachlorides with ethanol, 12:45912 (RA;SU;In Russian)
NIOBIUM COMPOUNDS
See also NIOBATES
NIOBIUM CHLORIDES
NIOBIUM OXIDES
Chemical Reactions
Evaluation of laser desorbed transition-metal ions as analytical chemical ionization reagents by pattern recognition, 12:45870 (J;US)
NIOBIUM OXIDES
Thermodynamic Activity
Partial thermodynamic properties of Bi_2O_3 in solid solutions Bi_2O_3-Ta_2O_5, 12:45767 (RA;SU;In Russian)
NITRIC ACID
Production
Motor and turbine as co-drivers, 12:45676 (RA;GB)
NITRIC OXIDE
NO.
Removal
Study on NO removal in combustion flue gas by ammonia gas injection, 12:44882 (R;JP;In Japanese)
NITRIDES
See also BORON NITRIDES
SILICON NITRIDES
Laser Materials
Physical chemistry of energetic nitrides. Final report, 1 November 1983-30 April 1987, 12:45997 (R;US)
NITROGEN
Acoustic Measurements
Laser optogalvanic and photoacoustic studies of some atoms and small molecules, 12:46418 (R;US)
Dissociation
Estimate of the barrier to and rate of dissociation of dense nitrogen under shock conditions, 12:45836 (J;US)
The dissociation of dense liquid nitrogen and shock cooling, 12:46784 (R;US)
Electronic Structure
Nuclear quadrupole moment of ^{14}N. A theoretical prediction from full valence shell and full configuration interaction atomic wave functions, 12:46439 (J;US)
Laser Spectroscopy
Laser optogalvanic and photoacoustic studies of some atoms and small molecules, 12:46418 (R;US)
Mass Spectroscopy
Low-voltage, high-resolution mass spectrometric methods for fuel analysis: application to coal distillates, 12:44880 (J;US)
Nucleation
Liquid-to-vapor homogeneous nucleation in liquid nitrogen, 12:45839 (J;US)
Phase Studies
Nitrogen at high pressure, 12:45823 (R;US)
Superheating
Liquid-to-vapor homogeneous nucleation in liquid nitrogen, 12:45839 (J;US)
Vibrational States
Vibrational spectroscopy of shock-compressed fluid N_2 and O_2, 12:46737 (R;US)
NITROGEN 14
Quadrupole Moments
Nuclear quadrupole moment of ^{14}N. A theoretical prediction from full valence shell and full configuration interaction atomic wave functions, 12:46439 (J;US)
NITROGEN 15 TARGET
Pion Plus Reactions
Mass dependence of pion single-charge exchange to the isobaric analog state at 20 MeV, 12:46658 (J;US)
NITROGEN COMPOUNDS
See also AZIDES
NITRIDES
NITROGEN OXIDES
Removal
Nitrogen compound types in hydrotreated shale oils, 12:45050 (RA;US)
NITROGEN DIOXIDE
NO_2.
Toxicity
Effects of realistic combinations of SO/sub 2/, NO/sub 2/ and ozone on Sitka spruce, 12:46308 (R;DE)
NITROGEN IONS
Ion-Atom Collisions
Evidence for correlated double-electron capture in slow collisions of multicharged ions with He and H_2, 12:46466 (J;NL)
Ion-Molecule Collisions
Evidence for correlated double-electron capture in slow collisions of multicharged ions with He and H_2, 12:46466 (J;NL)
NITROGEN ISOTOPES
See also NITROGEN 14
Isotope Ratio
The atomic weight and isotopic composition of nitrogen and their variation in nature, 12:46159 (R;US)
Mass Number
The atomic weight and isotopic composition of nitrogen and their variation in nature, 12:46159 (R;US)
NITROGEN NITRIDES
See NITROGEN
NITROGEN OXIDES

NITROGEN DIOXIDE
Air Pollution Abatement
Elimination of SO_2 and reduction of NO/sub x/ formation through choice of appropriate fuel conversion and connected desulphurization, 12:45321 (R;XU)
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
Reduction of sulphur and nitrogen oxide emissions from fluidized bed boilers by control of combustion conditions, 12:44911 (R;XU)
Air Pollution Control
1987 symposium on stationary combustion nitrogen oxide control: Volume 1, 12:45322 (R;US)
1987 symposium on stationary combustion nitrogen oxide control: Volume 2, 12:45323 (R;US)
Cost of flue gas desulphurization and denitrification in the Federal Republic of Germany, 12:44897 (R;XU)
Costs and effectiveness of reducing sulphur and nitrogen emissions from power plants in Baden-Wuerttemberg, 12:44896 (R;XU)
Low-emission combustion processes, 12:44908 (R;XU)
Reduction of SO_2 and NO/sub x/ emissions from stationary sources in North Rhine-Westphalia - strategy and results, 12:44894 (R;XU)
Report of the seminar on the control of sulfur and nitrogen oxides from stationary sources, 12:46164 (R;XU)
Strategies for reducing sulphur and nitrogen emissions in relation to energy production structure and energy use, 12:44907 (R;XU)
Technologies for controlling pollutants from coal combustion, 12:44918 (R;XU)
Air Pollution Monitoring
Development of a high pressure dry coal feed system for a two-stage slagging gas turbine combustor, 12:45320 (B;US)
Combustion Kinetics
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly report No. 8, 12:45961 (R;US)

Deposition
Modeling the relationship between sources and receptors of wet deposition of S and NO/sub x/-N in the intermountain west of the United States, 12:46162 (R;US)
Emission
Rational use of energy and change in the pattern of energy consumption in the Federal Republic of Germany - effects on the emission of SO_2 and NO/sub x/, 12:46184 (R;XU)
Long-Range Transport
Modeling the relationship between sources and receptors of wet deposition of S and NO/sub x/-N in the intermountain west of the United States, 12:46162 (R;US)
Reduction
Use of advanced exhaust gas treatment devices, 12:45706 (TJ;GB)
Removal
Study on NO removal in combustion flue gas by ammonia gas injection, 12:44882 (R;JP;In Japanese)

NITROSO COMPOUNDS
Carcinogenesis
Morphological transformation induced by chemical carcinogens is enhanced by the biologically active metabolite of vitamin D_3, 1α,25-dihydroxycholecalciferol, 12:46322 (J;US)
Specific nuclear antigens expressed in differentiating human myeloid leukemia cells, 12:46323 (J;US)

NMR

NUCLEAR CHEMISTRY
Research Programs
Isotope and Nuclear Chemistry Division annual report FY 1986, October 1985-September 1986, 12:45957 (R;US)
NUCLEAR DATA COLLECTIONS
Annual progress report on nuclear data, 1986, 12:46678 (R;BE)
NUCLEAR ELECTRIC MOMENTS
Coupling
Primer on coupling collective electronic oscillations to nuclei, 12:46826 (R;US)
NUCLEAR ENERGY
Hazards
Importance of probabilistic evaluations in connection with risk analyses according to technical safety laws. A contribution to the clearer definition of 'risks' and 'hazards' with particular regard to the Atomic Energy Law, 12:45554 (R;DE;In German)
International Cooperation
Third review conference of the parties of the Treaty on Non-Proliferation of Nuclear Weapons, and recent developments concerning international safeguards, 12:45556 (R;DE;In German)
Risk Assessment
Importance of probabilistic evaluations in connection with risk analyses according to technical safety laws. A contribution to the clearer definition of 'risks' and 'hazards' with particular regard to the Atomic Energy Law, 12:45554 (R;DE;In German)
NUCLEAR ENGINEERING
Standardization
1985 annual report of the Nuclear Engineering Committee (KTA), 12:45484 (R;DE;In German)
NUCLEAR EXPLOSION DETECTION
Seismic Detection
Capabilities of seismic networks and their design. Technical report for the period 1 January-31 March 1987, 12:46158 (R;US)
Finite-difference modeling of seismological problems in magnitude estimation using body waves, surface waves, and seismic source imaging. Final report, 11 February 1985-10 February 1987, 12:46304 (R;US)
NUCLEAR EXPLOSIONS
Specifically named single nuclear explosions are listed by name and the word EVENT, e.g., BOXCAR EVENT. All projects involving nuclear explosions are listed by the project name and the word PROJECT, e.g., PLOWSHARE PROJECT.
See also GREENHOUSE PROJECT
Fallout Shelters
Blast testing of expedient shelters in model scale, 12:46146 (R;US)
Greenhouse Project
Analysis of radiation exposure for personnel on the residence islands of Enewetak Atoll after Operation Greenhouse, 1951-1952. Technical report, 3 December 85-20 April 1987, 12:46155 (R;US)
Simulation
Blast testing of expedient shelters in model scale, 12:46146 (R;US)
Damage distant airblast from MINOR SCALE, 12:46145 (R;US)
Expanded simulation techniques: DIRECT COURSE - a 1-kt height-of-burst nuclear-blast simulation. MINOR SCALE - an 8-kt surface nuclear-blast simulation, 12:46144 (R;US)
Large blast-wave simulators (lbs) with cold-gas drivers: computational design studies. Final report, 12:46143 (R;US)
NUCLEAR FACILITIES

FUEL CYCLE CENTERS
FUEL FABRICATION PLANTS
FUEL REPROCESSING PLANTS
NUCLEAR POWER PLANTS
RADIOACTIVE WASTE FACILITIES
Alarm Systems
Installation of and experience with a new standard criticality alarm system, 12:45513 (R;US)
Domestic Safeguards
Safeguards Summary Event List (SSEL): Pre-NRC through December 31, 1986, 12:45165 (R;US)
Radioactive Effluents
Alternatives to disposal of Hanford Site liquid effluents to the soil column, 12:45135 (R;US)
Safeguards
What are the attributes of a good standard and associated criteria?, 12:45158 (R;US)
Security
What are the attributes of a good standard and associated criteria?, 12:45158 (R;US)
NUCLEAR FUEL ELEMENTS
See FUEL ELEMENTS
NUCLEAR FUELS
See also SPENT FUELS
Isotope Ratio
Error evaluation for the numerical integration of special stiff differential equation systems, 12:45142 (RA;DD;In German)
NUCLEAR INDUSTRY
Artificial Intelligence
Applications of artificial intelligence in the US nuclear industry, 12:46961 (R;US)
Technology Transfer
Assessment of the impacts of transferring certain nuclear reactor technologies to the Soviet Union and Eastern Europe, 12:45558 (R;US)
NUCLEAR MAGNETIC RESONANCE
Pulse Techniques
Theory and applications of maps on SO(3) in nuclear magnetic resonance, 12:46129 (R;US)
SO-3 Groups
Theory and applications of maps on SO(3) in nuclear magnetic resonance, 12:46129 (R;US)
NUCLEAR MATERIALS MANAGEMENT
Accounting
A general approach to error propagation, 12:45159 (R;US)
A simulation model for material accounting systems, 12:45163 (R;US)
An integrated nondestructive assay system for a new plutonium scrap recovery facility, 12:45084 (J;US)
DYMAC - The first stab at large safeguards systems, 12:45180 (J;US)
Low level detection in safeguards and verification, 12:45170 (J;US)
Safeguards from the operators viewpoint, 12:45178 (J;US)
The development of gamma-ray spectrometry for safeguards, 12:45875 (J;US)
The role of systems studies in safeguards: Designing integrated systems, 12:45169 (J;US)
Variance and covariance calculations for nuclear materials accounting using "MAVARIC", 12:45162 (R;US)
Activation Analysis
The role of neutrons in safeguards, 12:45874 (J;US)
Computerized Control Systems
An integrated nondestructive assay system for a new plutonium scrap recovery facility, 12:45084 (J;US)
Data Covariances
1987 target values for uncertainty components in fissile isotope and element assay, 12:45171 (J;US)
Destructive Testing
1987 target values for uncertainty components in fissile isotope and element assay, 12:45171 (J;US)
Low Level Counting
Low level detection in safeguards and verification, 12:45170 (J;US)
Nondestructive Analysis
An integrated nondestructive assay system for a new plutonium scrap recovery facility, 12:45084 (J;US)
Safeguards from the operators viewpoint, 12:45178 (J;US)
Safeguards: The past present, and future, 12:45179 (J;US)
The development of gamma-ray spectrometry for safeguards, 12:45875 (J;US)
The role of neutrons in safeguards, 12:45874 (J;US)
P Codes
PROSA: A computer program for statistical analysis of near-real-time-accountancy (NRTA) data, 12:45161 (R;DE)
Physical Protection
History of physical security R and D, 12:45177 (J;US)

Quantitative Chemical Analysis
1987 target values for uncertainty components in fissile isotope and element assay, 12:45171 (J;US)
Radiation Detectors
Low level detection in safeguards and verification, 12:45170 (J;US)
Real Time Systems
DYMAC - The first stab at large safeguards systems, 12:45180 (J;US)
Safeguards
1987 target values for uncertainty components in fissile isotope and element assay, 12:45171 (J;US)
DYMAC - The first stab at large safeguards systems, 12:45180 (J;US)
Low level detection in safeguards and verification, 12:45170 (J;US)
Safeguards at Los Alamos: 20 years, 12:45172 (J;US)
Safeguards R and D at Los Alamos: The first 20 years, 12:45175 (J;US)
Safeguards R and D at Los Alamos: The next 20 years, 12:45176 (J;US)
Safeguards from the operators viewpoint, 12:45178 (J;US)
Safeguards: The past present, and future, 12:45179 (J;US)
The development of gamma-ray spectrometry for safeguards, 12:45875 (J;US)
The evolution of safeguards since Trinity - One man's viewpoint, 12:45174 (J;US)
The role of systems studies in safeguards: Designing integrated systems, 12:45169 (J;US)
The role of neutrons in safeguards, 12:45874 (J;US)
The US DOE safeguards program, 12:45173 (J;US)
Systems Analysis
The role of systems studies in safeguards: Designing integrated systems, 12:45169 (J;US)
Verification
Safeguards at Los Alamos: 20 years, 12:45172 (J;US)
NUCLEAR MATTER
Exotic Resonances
Tau electron atoms at RHIC, 12:46475 (BA;US)
Nuclear Structure
Tau electron atoms at RHIC, 12:46475 (BA;US)
NUCLEAR MEDICINE
Bibliographies
Research with radioisotopes in clinical and laboratory medicine: a bibliographic review, 12:46259 (RA;ZA)
Diagnostic Techniques
VIIIth international symposium on nuclear medicine. Abstracts, 12:46255 (R;CS)
Research Programs
Isotope and Nuclear Chemistry Division annual report FY 1986, October 1985-September 1986, 12:45957 (R;US)
NUCLEAR PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Accelerator Facilities
Nuclear Physics accelerator facilities, 12:46055 (R;US)
Research Programs
Nuclear Science Division: Annual report for the period October 1, 1985-September 30, 1986, 12:46649 (R;US)
Nuclear structure at intermediate energies: Progress report, November 1986-August 1987, 12:46644 (R;US)
NUCLEAR POWER
Consumption Rates
Realizing coal's potential, 12:45574 (RA;US)
Supporting analysis for world energy outlook (Forecasting to 1995; EIA OMS models; global aspects), 12:45564 (RA;US)
Forecasting
Commercial nuclear power, 1987: Prospects for the United States and the world, 12:45552 (R;US)
Global Aspects
The need for nuclear power, 12:45575 (RA;US)
Production
Supporting analysis for US energy outlook (Forecasting to 1995), 12:45565 (RA;US)
NUCLEAR POWER PLANTS
An RHR operation guide system based on knowledge engineering, 12:45417 (RA;JP)
Accidents
The need for nuclear power, 12:45575 (RA;US)
Capitalized Cost
The need for nuclear power, 12:45575 (RA;US)
Computerized Control Systems
NAIG Critical Assembly (NCA) Radiation Monitoring System, 12:45420 (RA;JP)
Computerized Simulation
Integrated operator-plant process modeling and decision support for allocation of function, 12:45392 (R;US)
Construction
Nuclear power plant construction activity, 1986, 12:45553 (R;US)
The need for nuclear power, 12:45575 (RA;US)
Containment
Concrete containment tests: Phase 2, Structural elements with liner plates: Interim report, 12:45385 (R;US)
Containment Buildings
Validation of seismic soil-structure interaction analysis techniques with Lotung experiment data: Overview of EPRI/NRC research program, 12:45499 (RA;US)
Control Systems
Integrated operator-plant process modeling and decision support for allocation of function, 12:45392 (R;US)
Coordinated Research Programs
Strategies for development of intrinsically safe and economical reactors, 12:45442 (RA;US)
Design
A conceptual design of intrinsically safe and economical reactor (ISER), 12:45437 (RA;US)
A systematic and cost effective approach to nuclear plant life extension, 12:45389 (BA;US)
Barge mounter ISER [intrinsically safe and economical reactor], 12:45438 (RA;US)
Nuclear design of ISER [intrinsically safe and economical reactor], 12:45439 (RA;US)
Trade-offs in size, quantity and reliability of generalized nuclear power plants, 12:45331 (BA;US)
Economic Impact
Potential attractiveness of modular reactors, 12:45436 (RA;US)
Economics
The need for nuclear power, 12:45575 (RA;US)
Electric Generators
Aging of nuclear station diesel generators: Evaluation of operating and expert experience: Phase 1, Study, 12:45388 (R;US)
Engineered Safety Systems
Aging of Class 1E batteries in safety systems of nuclear power plants, 12:45506 (R;US)
Expert Systems
Use of expert systems for technical diagnostics in nuclear power engineering, 12:45386 (RA;CS;In Czech)
Fuel Management
Nuclear design of ISER [intrinsically safe and economical reactor], 12:45439 (RA;US)
Licensing
The need for nuclear power, 12:45575 (RA;US)
Loose Parts Monitoring
Loose-part location and mass estimation techniques, 12:45418 (RA;JP)
Loss of Coolant
Main pump trip response of PIUS [process inherent ultimate safety], 12:45440 (RA;US)
Machinery
Utility machinery vibration monitoring guide: Final report, 12:45394 (R;US)
Man-Machine Systems
Integrated operator-plant process modeling and decision support for allocation of function, 12:45392 (R;US)
Meetings
Proceedings of the workshop on intrinsically safe and economical reactors, 12:45433 (R;US)
Transactions of the 9th international conference on structural mechanics in reactor technology: Panel Session JK: Structural and mechanical engineering research at the United States Nuclear Regulatory Commission, 12:45495 (R;US)

Monitoring
Utility machinery vibration monitoring guide: Final report, 12:45394 (R;US)
Optimization
Trade-offs in size, quantity and reliability of generalized nuclear power plants, 12:45331 (BA;US)
Personnel
Integrated operator-plant process modeling and decision support for allocation of function, 12:45392 (R;US)
Pipes
EPRI/NRC piping and fitting dynamic reliability program, 12:45500 (RA;US)
INEL/USNRC pipe damping experiments and studies, 12:45504 (RA;US)
Production
Monthly energy review, April 1987, 12:45578 (R;US)
Radiation Monitoring
NAIG Critical Assembly (NCA) Radiation Monitoring System, 12:45420 (RA;JP)
Radioactive Waste Disposal
Evaluation of the radiological safety in storing and processing of liquid and solid radioactive wastes from nuclear power stations, 12:45136 (RA;DD;In Russian)
Radioactive Wastes
Technical development of spent resins volume reduction system by inorganization method: Advanced oxidative decomposition, 12:45130 (RA;JP)
Reactor Components
Component Fragility Research Program: Phase 1, Demonstration tests: Volume 1, Summary report, 12:45509 (R;US)
Component Fragility Research Program: Phase 1, Demonstration tests: Volume 2, Appendices, 12:45510 (R;US)
Determination of a modal interaction correction for narrowband fragility data, 12:45502 (RA;US)
Latest research results on seismic fragility data of nuclear power plant equipment, 12:45501 (RA;US)
Reactor Control Systems
Wide range gamma dose ratemeter, 12:45421 (RA;JP)
Reactor Instrumentation
An integrated approach for signal validation in nuclear power plants, 12:45383 (R;US)
Functional consistency checking module for signal validation: Topical report, 12:45384 (R;US)
Reactor Licensing
Enforcement actions: Significant actions resolved: Quarterly progress report, April-June 1987, 12:45375 (R;US)
Reactor Maintenance
A systematic and cost effective approach to nuclear plant life extension, 12:45389 (BA;US)
Reactor Monitoring Systems
Software conception of in-service diagnostic systems of nuclear steam-generating facilities, 12:45405 (RA;CS;In Czech)
Reactor Operation
Operating experience feedback report: New plants, Commercial power reactors, 12:45376 (R;US)
Reactor Safety
A conceptual design of intrinsically safe and economical reactor (ISER), 12:45437 (RA;US)
An experimental investigation of reduced stiffness at seismic working loads in reinforced concrete shear wall structures, 12:45503 (RA;US)
Barge mounter ISER [intrinsically safe and economical reactor], 12:45438 (RA;US)
Concepts of intrinsic safety, 12:45434 (RA;US)
Determination of a modal interaction correction for narrowband fragility data, 12:45502 (RA;US)
EPRI/NRC piping and fitting dynamic reliability program, 12:45500 (RA;US)
Latest research results on seismic fragility data of nuclear power plant equipment, 12:45501 (RA;US)
Main pump trip response of PIUS [process inherent ultimate safety], 12:45440 (RA;US)
Nuclear design of ISER [intrinsically safe and economical reactor], 12:45439 (RA;US)
Potential attractiveness of modular reactors, 12:45436 (RA;US)
Proceedings of the workshop on intrinsically safe and economical reactors, 12:45433 (R;US)
Small intrinsically safe reactor implications, 12:45435 (RA;US)
Strategies for development of intrinsically safe and economical reactors, 12:45442 (RA;US)
Transactions of the 9th international conference on structural mechanics in reactor technology: Panel Session JK: Structural and mechanical engineering research at the United States Nuclear Regulatory Commission, 12:45495 (R;US)
Validation of seismic soil-structure interaction analysis techniques with Lotung experiment data: Overview of EPRI/NRC research program, 12:45499 (RA;US)
Risk Assessment
Recovery actions in PRA [probabilistic risk assessment] for the Risk Methods Integration and Evaluation Program (RMIEP): Volume 1, Development of the data-based method, 12:45508 (R;US)
Safety Engineering
The need for nuclear power, 12:45575 (RA;US)
Seismic Effects
Development of computer program for generation of simulated earthquake ground motions, 12:45330 (RA;JP)
Transactions of the 9th international conference on structural mechanics in reactor technology: Panel Session JK: Structural and mechanical engineering research at the United States Nuclear Regulatory Commission, 12:45495 (R;US)
Validation of seismic soil-structure interaction analysis techniques with Lotung experiment data: Overview of EPRI/NRC research program, 12:45499 (RA;US)
Service Life
A systematic and cost effective approach to nuclear plant life extension, 12:45389 (BA;US)
Spent Fuels
Spent fuel storage technical exchange, 12:45092 (R;US)
Technology Transfer
Assessment of the impacts of transferring certain nuclear reactor technologies to the Soviet Union and Eastern Europe, 12:45558 (R;US)
Walls
An experimental investigation of reduced stiffness at seismic working loads in reinforced concrete shear wall structures, 12:45503 (RA;US)
Water Treatment
Water treatment for the ISER [intrinsically safe and economical reactor] plant, 12:45441 (RA;US)

ATHABASCA DEPOSIT
PR SPRINGS DEPOSIT

Lithology
Clay minerals in a Utah tar sand and their potential effects on processing, 12:45055 (R;US)

Mineralogy
Clay minerals in a Utah tar sand and their potential effects on processing, 12:45055 (R;US)

Petrography
Clay minerals in a Utah tar sand and their potential effects on processing, 12:45055 (R;US)

Reserves
Major tar sand deposits of Utah, United States: recent field investigations, 12:45017 (RA;US)

Resource Assessment
Major tar sand deposits of Utah, United States: recent field investigations, 12:45017 (RA;US)

Stratigraphy
Clay minerals in a Utah tar sand and their potential effects on processing, 12:45055 (R;US)

OIL SAND INDUSTRY

Environmental Impacts
Water characterization and treatment, 12:45067 (RA;US)

Thermal Recovery
Criteria for the selection and monitoring of in situ, thermal recovery processes, 12:45072 (RA;US)

Waste Water
Wastewater treatment during bitumen recovery from tar sand, 12:45068 (RA;US)

OIL SAND OILS
See BITUMENS

OIL SAND PROCESSING PLANTS

Environmental Impacts
Environmental aspects of coal liquefaction and heavy oil upgrading, 12:44864 (R;XU)

OIL SANDS

Chemical Properties
Characterization of clay minerals in a Utah tar sand, 12:45054 (RA;US)

Gas Combustion Process
Hot gas pyrolysis of tar sand, 12:45032 (RA;US)

In-Situ Combustion
Chemical and physical properties of oils produced from tar sand, 12:45053 (RA;US)
Numerical model for thermal recovery processes in tar sand: description and application, 12:45030 (RA;US)
Numerical simulation of four forward combustion tube experiments using the Tar Sand Triangle resource, 12:45031 (RA;US)

Mineralogy
Characterization of clay minerals in a Utah tar sand, 12:45054 (RA;US)

Oil Yields
Oil yield loss diagnostics, 12:45035 (RA;US)

Physical Properties
Characterization of clay minerals in a Utah tar sand, 12:45054 (RA;US)

Pyrolysis
Hot gas pyrolysis of tar sand, 12:45032 (RA;US)
Preliminary results of tar sand pyrolysis with product oil recycling, 12:45034 (RA;US)
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)

Retorting
Preliminary results of tar sand pyrolysis with product oil recycling, 12:45034 (RA;US)

Steam Injection
An evaluation of the potential end uses of a Utah tar sand bitumen, 12:45040 (R;US)
Chemical and physical properties of oils produced from tar sand, 12:45053 (RA;US)
Comparison of laboratory and field steamflood test results, 12:45029 (RA;US)
Hot gas pyrolysis of tar sand, 12:45032 (RA;US)

Thermal Recovery
Bonding energies of bitumen to tar sand mineral, 12:45036 (RA;US)
Chemical and physical properties of original tar sand bitumens, 12:45052 (RA;US)
Comparison of recovery processes for Asphalt Ridge tar sand, 12:45028 (RA;US)
Oil yield loss diagnostics, 12:45035 (RA;US)
Pyrolysis of Asphalt Ridge tar sand, 12:45033 (RA;US)

OIL SHALE INDUSTRY

Environmental Effects
Environmental risk assessment for a future oil shale industry in the western U.S., 12:45073 (BA;US)
Influence of retorted oil shale recarbonation on mineralogy and element mobility, 12:45065 (RA;US)
Methods for geochemical model evaluation, 12:45066 (RA;US)

Liquid Wastes
Methods for geochemical model evaluation, 12:45066 (RA;US)

Risk Assessment
Environmental risk assessment for a future oil shale industry in the western U.S., 12:45073 (BA;US)

Waste Management
Influence of retorted oil shale recarbonation on mineralogy and element mobility, 12:45065 (RA;US)

OIL SHALE MINING

Environmental Effects
Distribution of selected elements in oil shale retort products, 12:45069 (RA;US)
Trace element distribution and oil yield associations of oil shale resources, 12:45048 (RA;US)

Gaseous Wastes
Distribution of selected elements in oil shale retort products, 12:45069 (RA;US)

Liquid Wastes
Distribution of selected elements in oil shale retort products, 12:45069 (RA;US)

OIL SHALE WASTE WATER
See OIL SHALES WASTE WATER

OIL SHALES
Bibliographies
Bibliographic data base on trace elements in oil shale and its products, 12:45049 (RA;US)
Cavities
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)
Chemical Composition
Bibliographic data base on trace elements in oil shale and its products, 12:45049 (RA;US)
Distribution of selected elements in oil shale retort products, 12:45069 (RA;US)
Chemical Properties
Bibliographic data base on trace elements in oil shale and its products, 12:45049 (RA;US)
Characterization of interim reference oil shales, 12:45047 (RA;US)
Supercritical fluid extraction of oil shale, 12:45023 (RA;US)
Trace element distribution and oil yield associations of oil shale resources, 12:45048 (RA;US)
Compacting
Modeling of oil shale compaction during retorting, 12:45037 (R;US)
Comparative Evaluations
Characterization of interim reference oil shales, 12:45047 (RA;US)
Data Compilation
Characterization of interim reference oil shales, 12:45047 (RA;US)
Fischer Assay
Selected elemental distributions as determined by reference retorting of oil shale and possible correlation with Fischer assay oil yield, 12:45056 (R;US)
Trace element distribution and oil yield associations of oil shale resources, 12:45048 (RA;US)
Yield loss estimates from product evaluation, 12:45046 (RA;US)
Fuel Gas
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)
Geochemistry
Trace element distribution and oil yield associations of oil shale resources, 12:45048 (RA;US)
Ground Water
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)
Information Needs
Bibliographic data base on trace elements in oil shale and its products, 12:45049 (RA;US)
In-Situ Retorting
Characterization of waters from retort 1 at least tract C-a, 12:45070 (RA;US)
Combustion retorting of oil shale at low-void volumes, 12:45021 (RA;US)
Experimental testing of the TREE/sup sm/ process, 12:44827 (RA;US)
Gas tracer analysis on oil shale rubble with permeability contrasts, 12:45025 (RA;US)
Off-gas characterization and cleanup for simulated in situ retorting experiments, 12:45059 (RA;US)
Postburn evaluation of retort 1 at least tract C-a, 12:45027 (RA;US)
Profiling of organic solutes in oil shale by-product waters, 12:45061 (RA;US)
Radio-frequency heating of oil shale blocks, 12:45022 (RA;US)
Results of experiments on compaction of oil shale during retorting, 12:45018 (RA;US)
Modified In-Situ Processes
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Oil Yields
Horizontal low-void retorting of eastern and western oil shale, 12:45020 (RA;US)
Modifications to a one-dimensional retorting model, 12:45026 (RA;US)
Retorting oil shale rubble with permeability contrasts, 12:45019 (RA;US)
Selected elemental distributions as determined by reference retorting of oil shale and possible correlation with Fischer assay oil yield, 12:45056 (R;US)
Yield loss estimates from product evaluation, 12:45046 (RA;US)
Physical Properties
Characterization of interim reference oil shales, 12:45047 (RA;US)
Pyrolysis
Development of an isothermal pyrolysis apparatus, 12:45044 (RA;US)
Isothermal pyrolysis of Colorado oil shale, 12:45042 (RA;US)
Isothermal decomposition of New Albany shale from Kentucky, 12:45043 (RA;US)
Quantitative Chemical Analysis
Selected elemental distributions as determined by reference retorting of oil shale and possible correlation with Fischer assay oil yield, 12:45056 (R;US)
Research Programs
Development of an isothermal pyrolysis apparatus, 12:45044 (RA;US)
Isothermal pyrolysis of Colorado oil shale, 12:45042 (RA;US)
Isothermal decomposition of New Albany shale from Kentucky, 12:45043 (RA;US)
Reaction of Green River and Chattanooga oil shales with strong bases and radical-forming reagents, 12:45045 (RA;US)
Retorting oil shale rubble with permeability contrasts, 12:45019 (RA;US)
Retorting
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Distribution of selected elements in oil shale retort products, 12:45069 (RA;US)
Horizontal low-void retorting of eastern and western oil shale, 12:45020 (RA;US)
Leaching of retorted oil shale with complexometric agents, 12:45063 (RA;US)
Modeling of oil shale compaction during retorting, 12:45037 (R;US)
Modifications to a one-dimensional retorting model, 12:45026 (RA;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Retort water characterization and evaluation of treatment methods, 12:45071 (RA;US)
Retorting oil shale rubble with permeability contrasts, 12:45019 (RA;US)
Separation and detection of sulfur, nitrogen, and arsenic species in oil shale by-product waters using ion chromatography, 12:45060 (RA;US)
Technical and economic feasibility of sulfur trioxide retorting of oil shale, 12:45024 (RA;US)
Trace element distribution and oil yield associations of oil shale resources, 12:45048 (RA;US)
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)
Yield loss estimates from product evaluation, 12:45046 (RA;US)

OIL SPILL FINGERPRINTING
See OIL SPILLS

OIL SPILLS
Environmental Impacts
Oil spill vulnerability, coastal morphology, and sedimentation of outer Kenai Peninsula and Montague Island. Final report, 12:45005 (R;US)
Outer Continental shelf environmental assessment program. Final reports of principal investigators. Volume 51, 12:45003 (R;US)

Water Pollution
Study of the effects of oil on marine turtles, 12:46312 (R;US)
Study of the effects of oil on marine turtles. Volume 1. Executive summary. Final report, 30 September 1983-1 October 1985, 12:46313 (R;US)
Study of the effects of oil on marine turtles. Volume 2. Technical report. Final report, 30 September 1983-1 October 1985, 12:46314 (R;US)
Study of the effects of oil on marine turtles. Volume 3. Appendices. Final report, 30 September 1983-1 October 1985, 12:46315 (R;US)

OIL WELLS
Gas Injection
Bulk inert gas generation - a practical solution to enhanced oil recovery in the North Sea, 12:44978 (RA;GB)
Hydrodynamics
Sharp and diffuse fronts in oil reservoirs: Front tracking and capillarity, 12:44983 (BA;US)
Microemulsion Flooding
Contracts for field projects and supporting research on enhanced oil recovery: Progress review No. 47, Quarter ending June 1986, 12:44977 (R;US)
Pumps
Water injection - onshore/offshore, 12:44980 (RA;GB)
Waterflooding
Water injection - onshore/offshore, 12:44980 (RA;GB)

OIL-EXPORTING COUNTRIES
For broad, general use only; if specific countries are discussed use the specific country descriptor.
Depletion Allowances
Depletion policies for oil-exporting developing economies, 12:45587 (R;GB)
Economic Growth
Depletion policies for oil-exporting developing economies, 12:45587 (R;GB)

OKLAHOMA
Geologic Faults
Investigation of the Meers fault in southwestern Oklahoma, 12:46330 (R;US)

OMEGA FACILITY
LLE [Laboratory for Laser Energetics] review: Quarterly report, October-December 1986, 12:46905 (R;US)
Ultraviolet Spectrometers
LLE [Laboratory for Laser Energetics] review: Quarterly report, October-December 1986, 12:46905 (R;US)

OMEGA-784 RESONANCES
Particle Production
A measurement of the spin-parity of the $\omega\pi$/sup 0/ state at 1200 MeV/c/sup 2/ in $\gamma p \rightarrow p\omega\pi$/sup 0/ at 20 GeV, 12:46524 (BA;US)

ONAGAWA-1 REACTOR
Onagawa, Miyagi, Japan
Radioactive Wastes
Extended NAIG MU-Gamma System, 12:45419 (RA;JP)
Reactor Instrumentation
Extended NAIG MU-Gamma System, 12:45419 (RA;JP)

ONCOGENES
Gene Regulation
Repair of DNA treated with λ-irradiation and chemical carcinogens: Progress report, 1983-1987, 12:46239 (R;US)

OOCYTES
Radiosensitivity
Neutron RBEs and the radiosensitive target for mouse immature oocyte killing, 12:46302 (J;US)

OPERATION (REACTOR)
See REACTOR OPERATION

OPERATORS (MATHEMATICAL)
See MATHEMATICAL OPERATORS

OPTICAL FIBERS
Attenuation
Radiation-induced transient attenuation of optical fibers at 800 and 1300 nm, 12:45812 (R;US)
Physical Radiation Effects
Radiation-induced transient attenuation of optical fibers at 800 and 1300 nm, 12:45812 (R;US)

OPTICAL SYSTEMS
Description of a multiframe optical probing system, 12:45987 (R;US)
Antireflection Coatings
Porous halide antireflective coatings for adverse environments, 12:45849 (BA;US)
Computerized Control Systems
An autonomous, closed-loop pointing system for use with satellite optics, 12:45982 (R;US)
Shutters
Development of a large-aperture PLZT shutter with enhanced operational/environmental capabilities, 12:46040 (BA;US)

OPTIMIZATION
Linear Programming
Using MINOS [Modular In-core Nonlinear Optimization System] as a subroutine for decomposition, 12:46989 (R;US)
Nonlinear Programming
Using MINOS [Modular In-core Nonlinear Optimization System] as a subroutine for decomposition, 12:46989 (R;US)

OPTOACOUSTIC CELLS
See PHOTOACOUSTIC SPECTROMETERS

ORDNANCE
Combustion Kinetics
Thermographic observation of hydrocarbon oxygen explosions, 12:46154 (BA;US)
Detonations
Thermographic observation of hydrocarbon oxygen explosions, 12:46154 (BA;US)
Infrared Thermography
Thermographic observation of hydrocarbon oxygen explosions, 12:46154 (BA;US)

OREGON
Rivers
Natural propagation and habitat improvement: Volume 1, Oregon: Final and annual reports, 1986, 12:45224 (R;US)

ORGANIC COMPOUNDS
See also ALDEHYDES
AMINES
AROMATICS
HETEROCYCLIC COMPOUNDS
HYDROCARBONS
HYDROXY COMPOUNDS
KETONES
NUCLEIC ACIDS
ORGANIC HALOGEN COMPOUNDS
ORGANIC NITROGEN COMPOUNDS
ORGANIC OXYGEN COMPOUNDS
ORGANIC PHOSPHORUS COMPOUNDS
ORGANOMETALLIC COMPOUNDS
PROTEINS
Activation Analysis
Simultaneous determination of selenite and trimethylselenonium ions in urine by anion exchange chromatography and molecular neutron activation analysis, 12:45862 (J;US)
Biosynthesis
Bioconversion of methane and hydrogen to organic materials for chemical industry, 12:45931 (R;JP;In Japanese)
Ion Exchange Chromatography
Simultaneous determination of selenite and trimethylselenonium ions in urine by anion exchange chromatography and molecular neutron activation analysis, 12:45862 (J;US)
Volatile Matter
Volatile organic hydrocarbon and aldehyde composition in Raleigh, North Carolina during the 1985 woodsmoke study, 12:46177 (R;US)

ORGANIC FLUORINE COMPOUNDS
Decomposition
Organic Rankine-cycle power systems working fluids study: Topical report No. 1: Fluorinol 85 (85 mole % trofluoroethanol in water), 12:45900 (R;US)
Stability
Organic Rankine-cycle power systems working fluids study: Topical report No. 1: Fluorinol 85 (85 mole % trofluoroethanol in water), 12:45900 (R;US)
X-Ray Spectroscopy
EXAFS spectroelectrochemistry of coordination complexes in non-aqueous solutions, 12:45876 (BA;US)

ORGANIC HALOGEN COMPOUNDS
See also ORGANIC FLUORINE COMPOUNDS

Absorption Spectroscopy
Application of GC/FTIR to thermal degradation studies, 12:45897 (BA;US)
Gas Chromatography
Application of GC/FTIR to thermal degradation studies, 12:45897 (BA;US)
Pyrolysis
Application of GC/FTIR to thermal degradation studies, 12:45897 (BA;US)

ORGANIC NITROGEN COMPOUNDS
Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.
See also AZAARENES
IMINES
NITROSO COMPOUNDS
PORPHYRINS
Absorption Spectroscopy
Application of GC/FTIR to thermal degradation studies, 12:45897 (BA;US)
Gas Chromatography
Application of GC/FTIR to thermal degradation studies, 12:45897 (BA;US)
Mass Spectroscopy
Tandem quadrupole/time-of-flight mass spectrometer for application to environmental analyses, 12:45887 (BA;US)
Pyrolysis
Application of GC/FTIR to thermal degradation studies, 12:45897 (BA;US)
X-Ray Spectroscopy
EXAFS spectroelectrochemistry of coordination complexes in non-aqueous solutions, 12:45876 (BA;US)

ORGANIC OXYGEN COMPOUNDS
Excluding HYDROXY COMPOUNDS, CARBONIC ACID DERIVATIVES, LIPIDS, STEROIDS, CARBOHYDRATES, ORGANIC ACIDS, ALDEHYDES, KETONES and ESTERS.
See also DIOXIN
ETHERS
FURANS
KETENES
Absorption Spectroscopy
Combined use of GC/MI/FTIR and GC/MS in the analyses of complex environmental samples, 12:45885 (BA;US)
Gas Chromatography
Combined use of GC/MI/FTIR and GC/MS in the analyses of complex environmental samples, 12:45885 (BA;US)
Mass Spectroscopy
Combined use of GC/MI/FTIR and GC/MS in the analyses of complex environmental samples, 12:45885 (BA;US)
Photolysis
Laser flash—chemiluminescence study of $O_2(^1\Delta)$ photoeliminated from 1,4-dimethylnaphthalene endoperoxide, 12:45945 (J;US)

ORGANIC PHOSPHORUS COMPOUNDS
Excluding NUCLEIC ACIDS and NUCLEOTIDES.
Raman Spectroscopy
Surface-enhanced Raman spectrometry of organophosphorus chemical agents, 12:45864 (J;US)
X-Ray Spectroscopy
EXAFS spectroelectrochemistry of coordination complexes in non-aqueous solutions, 12:45876 (BA;US)

ORGANIC WASTES
See also AGRICULTURAL WASTES
Combustion
Evaluation of combustion processes for destruction of organic wastes - General Portland. Air pollution test report, 12:45683 (R;US)

ORGANOMETALLIC COMPOUNDS
For compounds of metals and semimetals with organic compounds, but only when the metal or semimetal is directly bound to carbon.
Supercritical Fluid Chromatography
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
X-Ray Spectroscopy
EXAFS spectroelectrochemistry of coordination complexes in non-aqueous solutions, 12:45876 (BA;US)

ORNL
Joining
Process and equipment capabilities materials joining laboratory, 1987, 12:45730 (R;US)
Radiometric Surveys
An aerial radiological survey of the White Oak Creek Floodplain, Oak Ridge Reservation, Oak Ridge, Tennessee: Date of survey: September-October 1986, 12:45151 (R;US)
Stacks
The stack and vent survey, 12:45981 (R;US)
Vents
The stack and vent survey, 12:45981 (R;US)

OSCILLATORS
See also HARMONIC OSCILLATORS
Physical Radiation Effects
All-metal resonator designs for visible/near-infrared free-electron laser oscillators, 12:46039 (BA;US)
Resonators
All-metal resonator designs for visible/near-infrared free-electron laser oscillators, 12:46039 (BA;US)

OSMIUM ALLOYS
Phase Studies
Formation of metastable structures and amorphous phases in Pu-based systems using the triode sputtering technique, 12:45739 (R;US)

OSMIUM COMPLEXES
Chemistry
Inorganic chemistry, 12:45903 (RA;ZA)

OUTER CONTINENTAL SHELF
See CONTINENTAL SHELF

OVERBURDEN
Leaching
Results of leaching experiments conducted on samples from the Tono I UCG cavity, 12:44838 (R;US)
Removal
Exploration by geophysical methods, extraction and transport of hard rock inclusions during overburden removal, 12:44937 (R;XU)
Potential for blast casting in Canadian surface mines, 12:44947 (R;CA)

OXETANE
See ETHERS

OXIDATION
See also COMBUSTION
Temperature Dependence
Spent fuel oxidation test results, 12:45104 (RA;US)

OXYGEN
Adsorption
A surface science investigation of potential intermediates, catalysts, and promoters in the synthesis of higher alcohols by metals: Progress report, 12:45208 (R;US)
Atom-Molecule Collisions
Reactive scattering of electronically excited alkali atoms with molecules, 12:46427 (R;US)
Chemiluminescence
Laser flash—chemiluminescence study of $O_2(^1\Delta)$ photoeliminated from 1,4-dimethylnaphthalene endoperoxide, 12:45945 (J;US)
Combustion Kinetics
Thermographic observation of hydrocarbon oxygen explosions, 12:46154 (BA;US)
Diffusion
Oxygen-vacancy behavior in La/sub 2-//sub x/Sr/sub x/CuO/sub 4-//sub y/ by positron annihilation and oxygen diffusion, 12:45778 (J;US)
Dissolution
Thermodynamics of dissolution of Xe, O_2 and NH_3 in solvents with different structural features at 278-318 K, 12:45927 (RA;SU;In Russian)
Fluorescence Spectroscopy
Photochemical effects in two-photon-excited fluorescence detection of atomic oxygen in flames, 12:45868 (J;US)
Infrared Thermography
Thermographic observation of hydrocarbon oxygen explosions, 12:46154 (BA;US)

Ion Collisions
Heavy-particle collisions in the plasma edge, 12:46841 (R;US)
Laser Spectroscopy
Photochemical effects in two-photon-excited fluorescence detection of atomic oxygen in flames, 12:45868 (J;US)
Mass Spectroscopy
Low-voltage, high-resolution mass spectrometric methods for fuel analysis: application to coal distillates, 12:44880 (J;US)
Photochemistry
Photochemical effects in two-photon-excited fluorescence detection of atomic oxygen in flames, 12:45868 (J;US)
Thermochemical Diagrams
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
Vibrational States
Vibrational spectroscopy of shock-compressed fluid N_2 and O_2, 12:46737 (R;US)

OXYGEN 16
Hypernuclei
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)

OXYGEN 16 REACTIONS
Heavy Ion Fusion Reactions
Crystal blocking in heavy ion reactions, 12:46666 (J;NL)

OXYGEN 16 TARGET
Pion Plus Reactions
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)

OXYGEN 17
E3-Transitions
Comment on "Electroexcitation of M4 transitions in /sup 17/O and /sup 18/O", 12:46697 (J;US)
M4-Transitions
Comment on "Electroexcitation of M4 transitions in /sup 17/O and /sup 18/O", 12:46697 (J;US)

OXYGEN 17 TARGET
Electron Reactions
Comment on "Electroexcitation of M4 transitions in /sup 17/O and /sup 18/O", 12:46697 (J;US)

OXYGEN 18
E3-Transitions
Comment on "Electroexcitation of M4 transitions in /sup 17/O and /sup 18/O", 12:46697 (J;US)
Energy Levels
Spectroscopy of /sup 18/O: Radiative capture, /sup 14/C(α,γ)/sup 18/O, 12:46657 (J;US)
Isotope Effects
Observation of an oxygen isotope effect in $YBa_2Cu_3O_7$, 12:45775 (J;US)
M4-Transitions
Comment on "Electroexcitation of M4 transitions in /sup 17/O and /sup 18/O", 12:46697 (J;US)

OXYGEN 18 TARGET
Electron Reactions
Comment on "Electroexcitation of M4 transitions in /sup 17/O and /sup 18/O", 12:46697 (J;US)
Photonuclear Reactions
Ground-state photoneutron reactions in sup18O, 12:46659 (J;US)

OXYGEN COMPOUNDS
See also BORATES
MOLYBDATES
NIOBATES

Energy spectrum of the $(\pi\pi)$, (πk), (kk)dimesic atoms. Electromagnetic interaction, 12:46563 (R;SU;In Russian)
Lamb Shift
Energy spectrum of the $(\pi\pi)$, (πk), (kk)dimesic atoms. Electromagnetic interaction, 12:46563 (R;SU;In Russian)
PILES
See FOUNDATIONS
PINS (FUEL)
See FUEL PINS
PION MINUS REACTIONS
Charge-Exchange Reactions
Total disintegration of three-nucleon systems from charged π-mesons reactions, 12:46689 (R;XA)
Elastic Scattering
Elastic scattering of 30 MeV positive and negative pions from nickel isotopes, 12:46663 (J;US)
PION MINUS-DEUTERON INTERACTIONS
See PION-DEUTERON INTERACTIONS
PION MINUS-PROTON INTERACTIONS
Particle Production
The results of two scattering processes: $\pi\pi \rightarrow$ phiphi and $\pi\pi \rightarrow$ KK-bar, 12:46541 (BA;US)
PION NEUTRAL-DEUTERON INTERACTIONS
See PION-DEUTERON INTERACTIONS
PION PLUS REACTIONS
Charge-Exchange Reactions
Double charge exchange to the double isobaric analog state at T/sub π/—292 MeV, 12:46661 (J;US)
Mass dependence of pion single-charge exchange to the isobaric analog state at 20 MeV, 12:46658 (J;US)
Nuclear bound states of the eta^0 meson and pion double-charge-exchange reactions, 12:46699 (J;US)
Pion charge exchange and nuclear structure: II, Nuclear structure calculation, 12:46686 (R;US)
Total disintegration of three-nucleon systems from charged π-mesons reactions, 12:46689 (R;XA)
Elastic Scattering
Elastic scattering of 30 MeV positive and negative pions from nickel isotopes, 12:46663 (J;US)
PION PLUS-DEUTERON INTERACTIONS
See PION-DEUTERON INTERACTIONS
PION-DEUTERON INTERACTIONS
Elastic Scattering
Unitary meson-exchange πNN models: NN and πd elastic scattering, 12:46695 (J;US)
OPE Model
Unitary meson-exchange πNN models: NN and πd elastic scattering, 12:46695 (J;US)

PIONIC ATOMS
Energy Levels
Energy spectrum of the ($\pi\pi$), (πk), (kk)dimesic atoms. Electromagnetic interaction, 12:46563 (R;SU;In Russian)
Lamb Shift
Energy spectrum of the ($\pi\pi$), (πk), (kk)dimesic atoms. Electromagnetic interaction, 12:46563 (R;SU;In Russian)
PION-NUCLEON INTERACTIONS
Spectral Functions
Calculation of the pion-nucleon double spectral functions and applications, 12:46561 (R;DE;In German)
PIONS
See also PIONS MINUS
PIONS NEUTRAL
PIONS PLUS
Electromagnetic Form Factors
Search for rare muon and pion decay modes with the crystal box detector, 12:46522 (BA;US)
Particle Production
Heavy ion precompound phenomena: A glance at hard gamma and subthreshold pion production, 12:46694 (R;US)
Radiative Decay
Search for rare muon and pion decay modes with the crystal box detector, 12:46522 (BA;US)
PIONS MINUS
Particle Production
Angular dependence of slope parameters of invariant inclusive cumulative hadron production cross section in pC-interactions at 10 Gev/c and in π/sup -/C-interactions at 40 Gev/c, 12:46656 (R;SU;In Russian)
Study of π/sup +/π/sup -/ transitions from the Y(3S), 12:46530 (BA;US)
PIONS NEUTRAL
Particle Production
A measurement of the spin-parity of the $\omega\pi$/sup 0/ state at 1200 MeV/c/sup 2/ in $\gamma p \rightarrow p\omega\pi$/sup 0/ at 20 GeV, 12:46524 (BA;US)
Branching ratio of $\Xi^0 \rightarrow \Lambda\gamma$, a weak radiative hyperon decay, 12:46521 (BA;US)
Radiative Decay
A search for the C-nonvariant decay $\pi^0 \rightarrow 3\gamma$, 12:46504 (R;US)
A search for the C-noninvariant decay π^0 yields 3γ, 12:46591 (R;US)
Branching ratio of $\Xi^0 \rightarrow \Lambda\gamma$, a weak radiative hyperon decay, 12:46521 (BA;US)
PIONS PLUS
Electromagnetic Form Factors
First observation of the decay π/sup +/$\rightarrow$e/sup +/e/sup -/e/sup +/ν and A determination of the formfactors F/sub V/, F/sub A/ and R, 12:46575 (BA;US)
Leptonic Decay
First observation of the decay π/sup +/$\rightarrow$e/sup +/e/sup -/e/sup +/ν and A determination of the formfactors F/sub V/, F/sub A/ and R, 12:46575 (BA;US)
Particle Production
Study of π/sup +/π/sup -/ transitions from the Y(3S), 12:46530 (BA;US)
Radiative Decay
First observation of the decay π/sup +/$\rightarrow$e/sup +/e/sup -/e/sup +/ν and A determination of the formfactors F/sub V/, F/sub A/ and R, 12:46575 (BA;US)
PIPELINES
See also ALASKA OIL PIPELINE
Centrifugal Pumps
Improvement of the efficiency of double-suction high-power centrifugal pumps, 12:45678 (RA;GB)
PIPES
Frequency Response Testing
INEL/USNRC pipe damping experiments and studies, 12:45504 (RA;US)
Leaks
Survey of vendors of external petroleum-leak -monitoring devices for use with underground storage tanks. Project report, 12:44985 (R;US)
Mechanical Vibrations
INEL/USNRC pipe damping experiments and studies, 12:45504 (RA;US)
Seismic Effects
EPRI/NRC piping and fitting dynamic reliability program, 12:45500 (RA;US)
Surface Coating
Anti-abrasion protection with highly organized materials (Carbon fiber lined PVC pipe used in oil shale retorts), 12:45821 (R;US)
Two-Phase Flow
Theoretical and empirical study of single-substance, upward two-phase flow in a constant-diameter adiabatic pipe, 12:45293 (R;US)
PITTSBURGH ENERGY TECHNOLOGY CENTER
International Cooperation
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
Technology Transfer
[Pittsburgh Energy Technology Center]: Quarterly technical progress report for the period ending December 31, 1986, 12:44815 (R;US)
PLANETARY ATMOSPHERES
Excludes EARTH ATMOSPHERE.
Absorptivity
Laboratory evaluation and application of microwave absorption properties under simulated conditions for planetary atmospheres. Semiannual status report, 1 February-31 July 1987, 12:46378 (R;US)
PLANKTON
See also PHYTOPLANKTON
Lower Cook inlet meroplankton. Final report, 12:44999 (R;US)
PLANT CELLS
Biological Radiation Effects
Stochastic models for cells exposed to ionizing radiation, 12:46273 (R;US)
PLANTS
See also TREES
VEGETABLES
Anaerobic Digestion
Generation of gases from biomass by anaerobic digestion and their practical utilization as fuel, 12:45188 (R;GB)
PLANTS (INDUSTRIAL)
See INDUSTRIAL PLANTS
PLASMA
See also COLLISIONAL PLASMA
HIGH-BETA PLASMA
INHOMOGENEOUS PLASMA
LASER-PRODUCED PLASMA
LOW-BETA PLASMA
ROTATING PLASMA
Bernstein Mode
Study of directly launched ion Bernstein waves in a tokamak, 12:46883 (J;US)
Current-Drive Heating
Anomalous temperature equilibria due to E x B drive, 12:46888 (J;US)
Drift Instability
Statistical closure approximations and the fluctuation-dissipation theorem for drift-wave interaction, 12:46875 (J;US)
Dynamics
Hamiltonian four-field model for nonlinear tokamak dynamics, 12:46878 (J;US)
Equilibrium
Collective effects on equilibria of trapped charged plasmas, 12:46877 (J;US)
Hamiltonians
Hamiltonian four-field model for nonlinear tokamak dynamics, 12:46878 (J;US)
Ion Temperature
Anomalous temperature equilibria due to E x B drive, 12:46888 (J;US)
Kink Instability
Mechanism for rapid sawtooth crashes in tokamaks, 12:46887 (J;US)
Larmor Radius
Hamiltonian four-field model for nonlinear tokamak dynamics, 12:46878 (J;US)

Neutron Emission
Enhanced stability and neutron production in a dense Z-pinch plasma formed from a frozen deuterium fiber, 12:46886 (J;US)
Nonlinear Problems
Hamiltonian four-field model for nonlinear tokamak dynamics, 12:46878 (J;US)
Statistical closure approximations and the fluctuation-dissipation theorem for drift-wave interaction, 12:46875 (J;US)
Plasma Confinement
Collective effects on equilibria of trapped charged plasmas, 12:46877 (J;US)
Traps
Collective effects on equilibria of trapped charged plasmas, 12:46877 (J;US)
Turbulence
Statistical closure approximations and the fluctuation-dissipation theorem for drift-wave interaction, 12:46875 (J;US)

PLASMA ARC SPRAYING
Infrared Thermography
A thermographic look at plasma spraying, 12:46141 (BA;US)

PLASMA CONFINEMENT
See also INERTIAL CONFINEMENT
Computerized Simulation
Computational methods for kinetic models of magnetically confined plasmas, 12:46894 (B;US)
Fokker-Planck Equation
Computational methods for kinetic models of magnetically confined plasmas, 12:46894 (B;US)
Kinetic Equations
Computational methods for kinetic models of magnetically confined plasmas, 12:46894 (B;US)
Mathematical Models
Computational methods for kinetic models of magnetically confined plasmas, 12:46894 (B;US)
Research Programs
Massachusetts Institute of Technology Plasma Fusion Center: 1986-1987 Report to the President, 12:46862 (R;US)

PLASMA DIAGNOSTICS
A Codes
Direct detection of optical radiation through a sampling orifice for inductively coupled plasma atomic emission spectroscopy, 12:46423 (R;US)
Computerized Simulation
Numerical simulations of plasmas, 12:46895 (B;US)
Emission Spectroscopy
Direct detection of optical radiation through a sampling orifice for inductively coupled plasma atomic emission spectroscopy, 12:46423 (R;US)
TuFF4. Half-integer harmonic emission from laser plasmas as a coronal temperature diagnostic, 12:46896 (J;US)
F Codes
Direct detection of optical radiation through a sampling orifice for inductively coupled plasma atomic emission spectroscopy, 12:46423 (R;US)
Fluorescence Spectroscopy
Summary abstract: measurement of impurities in a neutral beam by laser induced fluorescence, 12:46897 (J;US)
Mathematical Models
Numerical simulations of plasmas, 12:46895 (B;US)
Research Programs
Numerical simulations of plasmas, 12:46895 (B;US)

PLASMA FILAMENT
Morphology
Similarities between the plasma vortex filaments (relativistic and nonrelativistic) observed in the plasma focus and in conventional relativistic electron-beam machines, 12:46939 (J;US)

PLASMA FOCUS
Plasma Filament
Similarities between the plasma vortex filaments (relativistic and nonrelativistic) observed in the plasma focus and in conventional relativistic electron-beam machines, 12:46939 (J;US)

PLASMA HEATING
Research Programs
Massachusetts Institute of Technology Plasma Fusion Center: 1986-1987 Report to the President, 12:46862 (R;US)

PLASMA INSTABILITY
See also ABSOLUTE INSTABILITIES
PLASMA MICROINSTABILITIES
New directions in Vlasov plasma turbulence and anomalous transport, 12:46854 (R;US)
Raman Effect
Laser-driven instabilities in long scalelength plasmas, 12:46928 (R;US)

PLASMA MICROINSTABILITIES
Boltzmann-Vlasov Equation
Gyrokinetic particle simulation model, 12:46885 (J;US)
Plasma Simulation
Gyrokinetic particle simulation model, 12:46885 (J;US)

PLASMA (QUARK)
See QUARK MATTER

PLASMA RINGS
Kinetic Energy
Results from the RACE [Ring ACceleration Experiment] Compact Torus Acceleration Experiment, 12:46873 (R;US)
Research Programs
Results from the RACE [Ring ACceleration Experiment] Compact Torus Acceleration Experiment, 12:46873 (R;US)

PLASMA SCRAPE-OFF LAYER
Fluctuations
Thermally driven convective cells and tokamak edge turbulence, 12:46853 (R;US)
Turbulence
Thermally driven convective cells and tokamak edge turbulence, 12:46853 (R;US)

PLASMA SHEATH
Plasma Simulation
Vortex dynamics and transport to the wall in a crossed-field plasma sheath, 12:46865 (R;US)

PLASMA SIMULATION
A Codes
Electromagnetic direct implicit plasma simulation, 12:46884 (J;US)
E Codes
ES2 user's manual: Version 1, 12:46866 (R;US)
Parallel Processing
QN3D: A three-dimensional quasi-neutral hybrid particle-in-cell code with applications to the tilt mode instability in field reversed configurations, 12:46996 (R;US)
Q Codes
QN3D: A three-dimensional quasi-neutral hybrid particle-in-cell code with applications to the tilt mode instability in field reversed configurations, 12:46996 (R;US)
Research Programs
Plasma theory and simulation: Quarterly progress report Nos. 1 and 2, January 1, 1986-June 30, 1986, 12:46847 (R;US)

PLASTICS
See also MYLAR
Surface Coating
Anti-abrasion protection with highly organized materials, 12:45821 (R;US)

PLATES
Thicker than SHEETS or FOILS.
Application of viscoplastic constitutive equations in finite element programs, 12:45387 (R;DE;In German)
Flow Models
Prediction of turbulent source flow between corotating disks with an anisotropic two-equation turbulence model, 12:46019 (B;US)
Turbulent Flow
Prediction of turbulent source flow between corotating disks with an anisotropic two-equation turbulence model, 12:46019 (B;US)

PLATINUM ALLOYS
Absorption Spectra
Extended x-ray-absorption fine-structure study of amorphous (Ni/sub x/Pt/sub 100-//sub x/)/sub 75/P/sub 25/ alloys, 12:45745 (J;US)

X-Ray Spectra
Extended x-ray-absorption fine-structure study of amorphous (Ni/sub x/Pt/sub 100-//sub x/)/sub 75/P/sub 25/ alloys, 12:45745 (J;US)

PLATINUM FLUORIDES
Affinity
Mass-spectrum study of ion-molecular equilibria with the participation of higher fluorides of ruthenium and platinum, 12:45923 (RA;SU;In Russian)
Reaction Heat
Mass-spectrum study of ion-molecular equilibria with the participation of higher fluorides of ruthenium and platinum, 12:45923 (RA;SU;In Russian)

PLESIOTHERAPY
See RADIOTHERAPY

PLT DEVICES
Ion Temperature
Effect of deuteron temperature on iron forbidden-line intensities in rf-heated tokamak plasmas, 12:46874 (J;US)

PLUTONIUM
Absorption Spectroscopy
Case studies of fiber optic sensors in process analysis, 12:45890 (BA;US)
Activation Analysis
The role of neutrons in safeguards, 12:45874 (J;US)
Concentration Ratio
Determination of impurities in plutonium by direct current plasma emission spectroscopy, 12:45892 (BA;US)
Emission Spectroscopy
Determination of impurities in plutonium by direct current plasma emission spectroscopy, 12:45892 (BA;US)
Fluorescence Spectroscopy
Case studies of fiber optic sensors in process analysis, 12:45890 (BA;US)
Hydrolysis
Chemical behaviour of plutonium in natural, aquatic systems: Hydrolysis, carbonate complexation and redox reactions, 12:45954 (R;DE;In German)
Nondestructive Analysis
The role of neutrons in safeguards, 12:45874 (J;US)
Quantitative Chemical Analysis
Determination of impurities in plutonium by direct current plasma emission spectroscopy, 12:45892 (BA;US)
Radioactive Wastes
Passive neutron assay of plutonium contaminated wastes, 12:45128 (RA;JP)
Recovery
Applications of molten salts in plutonium processing, 12:45083 (R;US)
Reclamation of plutonium from pyrochemical processing residues, 12:45081 (R;US)
Safeguards
The role of neutrons in safeguards, 12:45874 (J;US)
Solvent Extraction
Determination of impurities in plutonium by direct current plasma emission spectroscopy, 12:45892 (BA;US)

PLUTONIUM 239
Criticality
Critical dimensions of systems containing ^{235}U, ^{239}Pu, and ^{233}U: 1986 Revision, 12:45380 (R;US)
Radioecological Concentration
Site surveillance and maintenance program for Palos Park: Report for 1986, 12:45153 (R;US)

PLUTONIUM 239 TARGET
Photofission
Analysis of fissionable material using delayed gamma rays from photofission, 12:46681 (J;NL)
Analysis of fissionable material using delayed gamma rays from photofission, 12:46682 (J;NL)

PLUTONIUM ALLOYS
Phase Studies
Formation of metastable structures and amorphous phases in Pu-based systems using the triode sputtering technique, 12:45739 (R;US)

PLUTONIUM COMPLEXES
Stability
Chemical behaviour of plutonium in natural, aquatic systems: Hydrolysis, carbonate complexation and redox reactions, 12:45954 (R;DE;In German)

PLUTONIUM COMPOUNDS
See also PLUTONIUM NITRATES
Redox Potential
Chemical behaviour of plutonium in natural, aquatic systems: Hydrolysis, carbonate complexation and redox reactions, 12:45954 (R;DE;In German)
Valence
Chemical behaviour of plutonium in natural, aquatic systems: Hydrolysis, carbonate complexation and redox reactions, 12:45954 (R;DE;In German)

PLUTONIUM DIOXIDE
Dissolution
Process for dissolving slightly soluble thorium and/or plutonium oxides, 12:45086 (TG;US)

PLUTONIUM ISOTOPES
See also PLUTONIUM 239
Radioecological Concentration
The simultaneous determination of americium and plutonium by liquid scintillation counting, 12:46190 (BA;US)
Scintillation Counting
The simultaneous determination of americium and plutonium by liquid scintillation counting, 12:46190 (BA;US)

PLUTONIUM NITRATES
Diffusion
Transport characteristics of thorium nitrate in different practice-oriented solutions and diffusion coefficients of plutonium(IV)-nitrate in a nitric acid solution. A contribution to the optimization of the reprocessing of nuclear fuels, 12:45082 (R;DE;In German)

PLUTONIUM RECYCLE
Computerized Control Systems
An integrated nondestructive assay system for a new plutonium scrap recovery facility, 12:45084 (J;US)
Process Control
An integrated nondestructive assay system for a new plutonium scrap recovery facility, 12:45084 (J;US)

PLZT
Electrical Properties
Electrical properties of grain-grown PLZT ceramics, 12:45800 (BA;US)
Fabrication
Development of a large-aperture PLZT shutter with enhanced operational/environmental capabilities, 12:46040 (BA;US)
Grain Size
Electrical properties of grain-grown PLZT ceramics, 12:45800 (BA;US)

PNA

Carrier Lifetime
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Chemical Preparation
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)
Crystal Structure
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)
Raman Spectra
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Reflectivity
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
Sorptive Properties
In situ optical and structural studies of H_2 chemisorption in C_8K, 12:45842 (J;US)
POTASSIUM PHOSPHATES
Crystal Growth
Damage resistance and crystal growth of KDP [potassium dihydrogen phosphate], 12:46781 (R;US)
POWER CONDITIONING CIRCUITS
Control Equipment
Reactive power management device assessment: Final report, 12:46029 (R;US)
Cost Benefit Analysis
Reactive power management device assessment: Final report, 12:46029 (R;US)
POWER DISTRIBUTION
Calculation Methods
Critical experiments on determination of power distribution by means of gamma sensitive detector in BWRs, 12:45333 (RA;JP)
POWER GENERATION
See also COGENERATION
Cost Estimation
TF & PF magnet power conversion, 12:46904 (R;US)
POWER POOLS
See INTERCONNECTED POWER SYSTEMS
POWER SUPPLIES
See also PHOTOVOLTAIC POWER SUPPLIES
SPACECRAFT POWER SUPPLIES
Pulsed-power equipment for university accelerator-technology program. Final report, 12:46074 (R;US)
POWER SYSTEMS
Includes electric power networks with associated generating and transmission facilities.
See also DC SYSTEMS
INTERCONNECTED POWER SYSTEMS
RANKINE CYCLE POWER SYSTEMS
Control Systems
Dynamic security assessment for power systems: Research plan: Final report, 12:45313 (R;US)
Electric Power
Incentives for combined production of heat and power in some countries, 12:45559 (R;FI;In Finnish)
Load Management
Dynamic security assessment for power systems: Research plan: Final report, 12:45313 (R;US)
Thermal Power Plants
Incentives for combined production of heat and power in some countries, 12:45559 (R;FI;In Finnish)
POWER TRANSMISSION LINES
Monitors
Optical power line voltage and current measurement systems: Volume 1, Limits to the precision of electro-optic and magneto-optic sensors: Final report, 12:45329 (R;US)
POWER TRANSMISSION TOWERS
Design
Experimental analysis of drilled shaft foundations subjected to repeated axial loads under drained conditions: Final report, 12:45326 (R;US)
Foundations
Experimental analysis of drilled shaft foundations subjected to repeated axial loads under drained conditions: Final report, 12:45326 (R;US)
Soil-Structure Interactions
Experimental analysis of drilled shaft foundations subjected to repeated axial loads under drained conditions: Final report, 12:45326 (R;US)
PR SPRINGS DEPOSIT
Geology
Characterization of clay minerals in a Utah tar sand, 12:45054 (RA;US)
Research Programs
Characterization of clay minerals in a Utah tar sand, 12:45054 (RA;US)
PRASEODYMIUM 141
Photonuclear Reactions
Absolute photoneutron cross sections for Zr, I, Pr, Au, and Pb, 12:46669 (J;US)

PRASEODYMIUM BORIDES
Fabrication
Fabrication and characterization of rare earth hexaboride single-crystal materials, 12:45765 (R;US)
PRASEODYMIUM OXIDES
Thermodynamic Properties
Thermodynamic properties of Ln-Cu-O (Ln = La, Pr, Nd, Sm, Eu) systems, 12:45769 (RA;SU;In Russian)
PRECIPITATIONS (ATMOSPHERIC)
See ATMOSPHERIC PRECIPITATIONS
PRESSURE EFFECTS
Research Programs
Institute of Geophysics and Planetary Physics at Lawrence Livermore National Laboratory: 1986 annual report, 12:46334 (R;US)
PRESSURE VESSELS
Evaluation
Testing and evaluation of used UF_6 shipping packages, 12:45991 (BA;XA)
Materials
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)
Mechanical Vibrations
Problems in calculating reactor model (primary circuit) for nuclear power plant diagnostics, 12:45411 (RA;CS;In Czech)
Nondestructive Testing
Neutron embrittlement of reactor pressure vessel steels - a challenge to positron annihilation and other methods, 12:45732 (RA;DD)
Physical Radiation Effects
Neutron embrittlement of reactor pressure vessel steels - a challenge to positron annihilation and other methods, 12:45732 (RA;DD)
Positron annihilation studies on neutron irradiated reactor pressure vessel steels, 12:46765 (RA;DD)
Testing
Testing and evaluation of used UF_6 shipping packages, 12:45991 (BA;XA)
PRESSURIZED WATER COOLED MODERATED REACTO
See PWR TYPE REACTORS
PRESSURIZED WATER REACTORS
See PWR TYPE REACTORS
PRESTRESSED CONCRETE
Containment
Concrete containment tests: Phase 2, Structural elements with liner plates: Interim report, 12:45385 (R;US)
PRICES
Prior to June 1979, CHARGES was used.
Forecasting
World energy outlook: Economic and security implications, 12:45571 (RA;US)
PRIMARY COOLANT CIRCUITS
Corrosion
Probes for corrosion-related variables in LWR coolant: Interim report, 12:45340 (R;US)
Corrosion Protection
Probes for corrosion-related variables in LWR coolant: Interim report, 12:45340 (R;US)
PRINCETON LARGE TORUS
See PLT DEVICES
PROCESS HEAT REACTORS
Heat Exchangers
Calculation of creep deformation and stresses in thick-walled pipes, 12:45724 (R;DE;In German)
PROCESSING (WASTES)
See WASTE PROCESSING
PRODUCTION (HYDROGEN)
See HYDROGEN PRODUCTION
PRODUCTION (ISOTOPE)

PROFESSIONAL PERSONNEL
Training
Radioactive Waste Management Fellowship Program: Summary of program activities for calendar year 1986, 12:45116 (R;US)
The Hazardous Material Technician Apprenticeship Program at Lawrence Livermore National Laboratory, 12:46200 (R;US)
PROGRAM MANAGEMENT
Administrative Procedures
A plan for administrative computing at ANL FY1988 through FY1990, 12:46958 (R;US)
Documentation
Documentation as a management strategy for reaching goals in high-risk research-oriented projects, 12:46950 (R;US)
Expert Systems
Knowledge acquisition issues encountered during the development of an estimating expert system, 12:47005 (R;US)
Information Needs
Knowledge acquisition issues encountered during the development of an estimating expert system, 12:47005 (R;US)
Planning
A plan for administrative computing at ANL FY1988 through FY1990, 12:46958 (R;US)
Surveys
Physics through the nineties, 12:46343 (J;US)
PROGRAMMING LANGUAGES
See also NATURAL LANGUAGE
Praxis: The programming language: An advanced overview, 12:46992 (R;US)
PROJECT (GREENHOUSE)
See GREENHOUSE PROJECT
PROJECT MANAGEMENT
See PROGRAM MANAGEMENT
PROJECTILES
Impact Tests
High velocity erosion of metal interfaces, 12:45736 (R;US)
Launching
Effects of barrel joints on hypervelocity projectiles, 12:45986 (R;US)
PROPANE
Absorption Spectroscopy
Remote near infrared analyses of combustion gases over optical fibers, 12:45886 (BA;US)
PROPERTY MANAGEMENT
Administrative Procedures
A plan for administrative computing at ANL FY1988 through FY1990, 12:46958 (R;US)
Planning
A plan for administrative computing at ANL FY1988 through FY1990, 12:46958 (R;US)
PROPHASE
See MITOSIS
PROTAMINES
Electrophoresis
Distribution of protamines 1 and 2 in mammals and implications with respect to protamine gene expression, 12:45888 (BA;US)
Labelling
Distribution of protamines 1 and 2 in mammals and implications with respect to protamine gene expression, 12:45888 (BA;US)
Scintillation Counting
Distribution of protamines 1 and 2 in mammals and implications with respect to protamine gene expression, 12:45888 (BA;US)
PROTECTION (RADIATION)
See RADIATION PROTECTION
PROTEINS
See also GROWTH FACTORS
METALLOPROTEINS
PROTAMINES
RHODOPSIN
Biosynthesis
Apparatus for direct counting of beta-rays from two-dimensional protein gels: measurement of changes in protein synthesis due to changes in density of Chinese hamster ovary cells, 12:45873 (J;US)

Fluorescence Spectroscopy
Detection of single molecules of phycoerythrin in hydrodynamically focused flows by laser-induced fluorescence, 12:45865 (J;US)

PROTON REACTIONS
Elastic Scattering
Algorithm for integrating the Schroedinger equation, 12:46700 (J;US)

PROTON-ANTIPROTON INTERACTIONS
Correlation Functions
Study on the correlations between rapidities of two charged π-mesons in p-barp interactions at 32 GeV/c, 12:46508 (R;SU;In Russian)
Particle Production
A search for the $\xi(2.2)$ in p-barp formation, 12:46538 (BA;US)
Reviews
Search for long range interactions at highly relativistic velocities, 12:46517 (BA;US)

PROTON-NEUTRON INTERACTIONS
Potential Scattering
Neutron-proton scattering experiments and phase analyses for the n-p system in the energy range from 17 to 50 MeV, 12:46509 (R;DE;In German)
Research Programs
Study of the neutron-proton interaction in the 300-700 MeV energy region: Annual progress report, 1986-87, 12:46651 (R;US)

PROTON-PROTON INTERACTIONS
Color Model
An event generator for ultrarelativistic proton proton collisions: A multistring model, 12:46544 (R;US)
Fragmentation
An event generator for ultrarelativistic proton proton collisions: A multistring model, 12:46544 (R;US)
Radiation Detectors
Superfluid ^{4}He as a solar neutrino detector, 12:46110 (R;US)

PROTONS
Particle Production
Angular dependence of slope parameters of invariant inclusive cumulative hadron production cross section in pC-interactions at 10 Gev/c and in π/sup -/C-interactions at 40 Gev/c, 12:46656 (R;SU;In Russian)

PROTOPLASTS

PULMONARY CANCER
See CARCINOMAS

PULMONARY LAVAGE
See LUNGS

PULSED IRRADIATION
Personnel Dosimetry
Performance characteristics of a high-level solid-state personnel dosimetry system in pulsed radiation environments, 12:46101 (R;US)

PULVERIZED FUEL ASH
See FLY ASH

PULVERIZED FUELS
Combustion
Detailed model for practical pulverized coal furnaces and gasifiers: Quarterly technical progress report No. 7 for the period 1 May 1987 to 31 July 1987: Ninth quarterly reporting period, 12:44954 (R;US)

PULVERIZERS
Performance Testing
Development and testing of optimum comminution processes and equipment for the preparation of coal in a form adapted to new technologies, 12:44817 (R;XE;In German)
Investigation of the grinding process in an EVT mill - development of a process model, 12:44819 (R;AU)

PUMPS
See also CENTRIFUGAL PUMPS
Control Systems
Energy saving with electrical variable speed drives, 12:45677 (RA;GB)
Design
Water injection - onshore/offshore, 12:44980 (RA;GB)
Velocity
Energy saving with electrical variable speed drives, 12:45677 (RA;GB)

PUREX PROCESS
Equipment
Remote vacuum cleaner for PUREX cells, 12:45085 (J;US)

PVC
Radiolysis
On the conversion of alkyl radicals to polyenyl radicals in poly(vinylchloride) - quantum chemical model calculations, 12:45949 (RA;DD)

PWR TYPE REACTORS
See also CONNECTICUT YANKEE REACTOR
DUKOVANY V-2 REACTOR
MILLSTONE-3 REACTOR
SOUTH TEXAS PROJECT-1 REACTOR
THREE MILE ISLAND-2 REACTOR
WWER TYPE REACTORS
Computerized Control Systems
Advanced core-monitoring framework: Computer code manual, 12:45393 (R;US)
Containment Buildings
Seismic capability of containments including pressure effects, 12:45497 (RA;US)
Containment Systems
An evaluation of the effects of design details on the capacity of LWR [Light-water reactor] steel containment buildings, 12:45337 (R;US)
Fuel Cans
The impact of fuel cladding failure events on occupational radiation exposures at nuclear power plants: Case study, PWR [pressurized-water reactor] during an outage, 12:45507 (R;US)

Meltdown
Application of the core-concrete interaction code WECHSL to reactor case, 12:45472 (RA;US)
Importance of core/concrete interactions for German risk investigations and experimental verification, 12:45449 (RA;US)
Outages
The impact of fuel cladding failure events on occupational radiation exposures at nuclear power plants: Case study, PWR [pressurized-water reactor] during an outage, 12:45507 (R;US)
Primary Coolant Circuits
Probes for corrosion-related variables in LWR coolant: Interim report, 12:45340 (R;US)
Reactor Components
Examination of methods of analysing structural dynamics for their applicability in licensing procedures. Recent experience, results, and trends concerning the seismic load conditions, 12:45431 (R;DE;In German)
Reactor Core Disruption
Characteristics of releases from TREAT source-term experiment STEP-1, 12:45515 (J;US)
Reactor Cores
Analysis of in-core dynamics in pressurized water reactors with application to parameter monitoring, 12:45338 (R;US)
Reactor Operation
Licensee Event Report (LER) compilation for month of July 1987, 12:45377 (R;US)
Reactor Safety
Characteristics of releases from TREAT source-term experiment STEP-1, 12:45515 (J;US)
Seismic capability of containments including pressure effects, 12:45497 (RA;US)
Seismic margins review of nuclear power plants: NRC program overview, 12:45496 (RA;US)
Seismic Effects
Seismic margins review of nuclear power plants: NRC program overview, 12:45496 (RA;US)
Steam Generators
Intergranular attack of alloy 600 tubing: Simulation tests: Interim report, 12:45341 (R;US)
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)

PYRIMIDINE DIMERS
[Studies on the repair of damaged DNA in bacteriophage, bacterial and mammalian systems]: Final report, 12:46279 (R;US)

PYROLYSIS
Bench-Scale Experiments
Preliminary results of tar sand pyrolysis with product oil recycling, 12:45034 (RA;US)
Chemical Reaction Kinetics
Hot gas pyrolysis of tar sand, 12:45032 (RA;US)
Computerized Simulation
Hot gas pyrolysis of tar sand, 12:45032 (RA;US)
Research Programs
Preliminary results of tar sand pyrolysis with product oil recycling, 12:45034 (RA;US)

PYROLYTIC OILS
Fractionation
Biomass Thermochemical Conversion Program: 1986 annual report, 12:45206 (R;US)
Production
Biomass Thermochemical Conversion Program: 1986 annual report, 12:45206 (R;US)

PYROTECHNIC DEVICES
Reliability
Pyrotechnic component development at Sandia National Laboratory, 12:46149 (R;US)
Storage Life
Pyrotechnic component development at Sandia National Laboratory, 12:46149 (R;US)

PZT
Crystal-Phase Transformations
Electron microscopy characterization of lead zirconate titanate ceramics at the morphotropic phase boundary composition, 12:45799 (BA;US)
Electron Microscopy
Electron microscopy characterization of lead zirconate titanate ceramics at the morphotropic phase boundary composition, 12:45799 (BA;US)
X-Ray Spectroscopy
Electron microscopy characterization of lead zirconate titanate ceramics at the morphotropic phase boundary composition, 12:45799 (BA;US)

Q

QUALITY ASSURANCE
Quality assurance - a benefit or a burden?, 12:45895 (BA;US)

QUANTUM CHROMODYNAMICS
Computer Calculations
Status of the Columbia lattice parallel processor project, 12:46624 (BA;US)
Gauge Invariance
Yang-Mills theory and quantum chromodynamics in the temporal gauge, 12:46620 (J;US)
Lattice Field Theory
QCD glueballs in the presence of dynamcial fermions in a small periodic box, 12:46570 (J;NL)
Status of the Columbia lattice parallel processor project, 12:46624 (BA;US)
Monte Carlo Method
Status of the Columbia lattice parallel processor project, 12:46624 (BA;US)
Quark Matter
Status of the theory of QCD plasma, 12:46641 (BA;US)
Structure Functions
QCD predictions for the photon structure function, 12:46571 (BA;US)

QUANTUM ELECTRODYNAMICS
Gauge Invariance
Quantum electrodynamics in the temporal gauge, 12:46619 (J;US)
Self-Energy
Quantum electrodynamics based on self-energy: Spontaneous emission in cavities, 12:46814 (R;XA)
Quantum electrodynamics based on self-energy, without second quantization: The Lamb shift and long-range Casimir-Polder van der Waals forces near boundaries, 12:46602 (R;XA)

QUANTUM FIELD THEORY
See also LATTICE FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM ELECTRODYNAMICS
QUANTUM GRAVITY
A realistic model for quantum theory with a locality property, 12:46829 (R;US)
Canonical Transformations
Microcanonical quantization and its applications, 12:46640 (BA;US)
Conformal Invariance
Introduction to two dimensional conformal and superconformal field theory, 12:46636 (BA;US)
Gaussian Processes
Renormalization versus the Gaussian effective potential, 12:46617 (J;US)
Mathematical Space
Harmonic superspace formalism and the consistent Chiral anomaly, 12:46625 (BA;US)
Quantization
Microcanonical quantization and its applications, 12:46640 (BA;US)
Renormalization
Renormalization versus the Gaussian effective potential, 12:46617 (J;US)
String Models
String field theory at finite temperature, 12:46618 (J;US)

Supersymmetry
Finite quantum field theories and supersymmetry, 12:46614 (R;AT)
Harmonic superspace formalism and the consistent Chiral anomaly, 12:46625 (BA;US)
Introduction to two dimensional conformal and superconformal field theory, 12:46636 (BA;US)
Yang-Mills Theory
Harmonic superspace formalism and the consistent Chiral anomaly, 12:46625 (BA;US)
QUANTUM GRAVITY
Action Integral
Regular effective action of gauge field theory and quantum gravity, 12:46603 (R;XA)
QUANTUM MECHANICS
Analytical Solution
Exact solution for particle trajectories in modified quantum mechanics, 12:46825 (R;HU)
Hypothesis
Exact solution for particle trajectories in modified quantum mechanics, 12:46825 (R;HU)
Locality
Holistic aspects of quantum mechanics, 12:46831 (R;AT;In German)
Propagator
Path-integral derivation of the complex ABCD Huygens integral, 12:46835 (J;US)
Wave Equations
Path-integral derivation of the complex ABCD Huygens integral, 12:46835 (J;US)
Wave Packets
Quantum mechanics with spontaneous localization and the quantum theory of measurement, 12:46815 (R;XA)
QUARK MATERIAL
See QUARK MATTER
QUARK MATTER
Report on the parallel session on high energy nuclear interactions, 12:46701 (BA;US)
Equations of State
Quark matter in the Hartree-Fock approximation, 12:46600 (R;US)
Hadron Reactions
Signal for quark gluon plasma in fragmentation region, 12:46559 (R;XA)
Phase Diagrams
Thermodynamical considerations for the rehadronization of a quark-gluon plasma, 12:46690 (R;HU)
Quantum Chromodynamics
Status of the theory of QCD plasma, 12:46641 (BA;US)
Strangeness
Thermodynamical considerations for the rehadronization of a quark-gluon plasma, 12:46690 (R;HU)
QUARK MODEL
See also FLAVOR MODEL
STRING MODELS
Bag Model
Nonperturbative approach to quark propagator in the covariant, transverse gauge, 12:46609 (R;HU)
Cabibbo Angle
Implications of the observed K-M angles on future physics, 12:46579 (BA;US)
Infrared Divergences
Nonperturbative approach to quark propagator in the covariant, transverse gauge, 12:46609 (R;HU)
QUARK PLASMA
See QUARK MATTER
QUARK SEA
See QUARK MATTER
QUARK-GLUON INTERACTIONS
Report on the parallel session on high energy nuclear interactions, 12:46701 (BA;US)
QUARK-GLUON PLASMA
See QUARK MATTER
QUARKONIUM
A hypothetical bound state of quark and antiquark.
A study of strange and strangeonium states produced in LASS, 12:46539 (BA;US)
Energy Levels
New potential model for heavy quarkonium, 12:46555 (R;XA)
Particle Decay
New potential model for heavy quarkonium, 12:46555 (R;XA)
Particle Models
New potential model for heavy quarkonium, 12:46555 (R;XA)
QUARKS
Mass
Top quark and light Higgs scalar mass bounds in no-scale supergravity, 12:46626 (BA;US)
Particle Identification
Searches for monopoles and quarks, 12:46519 (BA;US)
Particle Structure
Substructure: A brief summary, 12:46574 (BA;US)
Rest Mass
On the gauge (in)dependence of the dynamical quark mass, 12:46552 (R;DE)
Weak Particle Decay
CP violation and weak decays of quarks and leptons, 12:46596 (BA;US)
QUARTZ
Acoustics
Radiation growth study of acoustic loss related defects in alpha-quartz, 12:45847 (J;US)
Crystal Structure
Radiation growth study of acoustic loss related defects in alpha-quartz, 12:45847 (J;US)
Radiolysis
Radiation growth study of acoustic loss related defects in alpha-quartz, 12:45847 (J;US)
Sorptive Properties
Mixture resolution of chemical agents detected by piezoelectric multisensor array, 12:45889 (BA;US)
Toxicity
Toxicity testing of drilling fluid: further studies of quartz-containing viscosifier on rat lung, 12:46318 (R;NO)
QUERCUS
See OAKS

R

R (EXPOSURE UNIT)
See RADIATION DOSE UNITS
RAD
See RADIATION DOSE UNITS
RADIATION ACCIDENTS
Classification
Analysis of unusual occurrences in the field of radiography and anti-emergency measures derived therefrom, 12:45512 (RA;DD;In German)
Emergency Plans
Model of population protection as applied to an urban area for a hypothetical nuclear power plant accident, 12:46286 (RA;IL)
First Aid
Doctors activities after radiation accidents, 12:46284 (RA;AT;In German)
International Agreements
Convention on assistance in the case of a nuclear accident or radiological emergency, 12:47009 (R;XA)
Therapy
Doctors activities after radiation accidents, 12:46284 (RA;AT;In German)
RADIATION BURDEN
See RADIATION DOSES
RADIATION CURING
Prior to December 1982 this concept was indexed by the coordination of CHEMICAL RADIATION EFFECTS and CROSS-LINKING.
Cost
Radiation curing. Comparison of heat, UV and radiation curing, 12:45182 (R;AT)

Uses
Radiation curing. Comparison of heat, UV and radiation curing, 12:45182 (R;AT)

RADIATION DAMAGE (BIOLOGICAL)
See RADIATION INJURIES

RADIATION DECONTAMINATION
See DECONTAMINATION

RADIATION DETECTORS
See also CHERENKOV COUNTERS
NEUTRON DETECTORS
SCINTILLATION COUNTERS
SHOWER COUNTERS
WHOLE-BODY COUNTERS

Performance Testing
Validation of the prompt alpha-track method, 12:46186 (R;US)

RADIATION DOSE DISTRIBUTIONS
Computerized Simulation
Dose calculation for contamination of the skin using the computer code VARSKIN, 12:46295 (R;US)
Monte Carlo Method
Specific absorbed fractions of energy at various ages from internal photon sources: 1, Methods, 12:46714 (R;US)
Numerical Solution
Specific absorbed fractions of energy at various ages from internal photon sources: 1, Methods, 12:46714 (R;US)
V Codes
Dose calculation for contamination of the skin using the computer code VARSKIN, 12:46295 (R;US)

RADIATION DOSE UNITS
For studies concerning units, concepts or definitions.
Calibration
Variation in thyroid calibration efficiencies as a function of phantom design for I-125, 12:46710 (R;US)

RADIATION DOSEMETERS
See DOSEMETERS

RADIATION DOSES
Computer Calculations
Electron transport calculations with biomedical and environmental applications: [Progress report, FY 1987], 12:46277 (R;US)
Computerized Simulation
Specific absorbed fractions of energy at various ages from internal photon sources: 3, Five-year-old, 12:46716 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 4, Ten-year-old, 12:46717 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 1, Methods, 12:46714 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 5, Fifteen-year-old male and adult female, 12:46718 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 6, Newborn, 12:46719 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 7, Adult male, 12:46720 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 2, One-year-old, 12:46715 (R;US)

RADIATION EXPOSURE (DOSES)
See RADIATION DOSES

RADIATION HYGIENE
See RADIATION PROTECTION

RADIATION INDUCED MUTANTS
DNA Repair
Mutational specificity of SOS mutagenesis, 12:46291 (RA;JP;In Japanese)

RADIATION INJURIES
Meetings
Proceedings of the symposium on fundamental problems in biological damage by radiation, 12:46293 (R;JP;In Japanese)

RADIATION PROTECTION
Dosimetry of x-ray beams: The measure of the problem, 12:46294 (R;US)
Radiation protection 1/87, 12:45154 (R;AT;In German)
Historical Aspects
Development of radioisotope applications in South Africa, 12:46260 (RA;ZA)
Meetings
1987 Annual Meeting. Program and abstracts of lectures, 12:46287 (R;IL)
Occupational Safety
Federal radiation protection guidance for occupational exposure: response to comments, 12:46721 (R;US)
Regulations
Federal radiation protection guidance for occupational exposure: response to comments, 12:46721 (R;US)
Standards
Environmental radiation standards, 12:45539 (R;US)

RADIATION SAFETY
See RADIATION PROTECTION

RADIATION SOURCES
For cosmic sources of radiation see also COSMIC GAMMA SOURCES, COSMIC RADIO SOURCES, and COSMIC X-RAY SOURCES.
See also GAMMA SOURCES
SYNCHROTRON RADIATION SOURCES
X-RAY SOURCES
Quality Assurance
Detection of an unknown fault in a Cobalt-60 radiotherapy unit during a quality assurance check, 12:46254 (RA;IL)
Uses
Industrial application of radioisotopes in South Africa: a bibliographic review, 12:45183 (RA;ZA)

RADIATION STREAMING
Monte Carlo Method
Analysis of the FNS streaming experiment with albedo Monte Carlo method, 12:46915 (RA;JP)

RADIATIONS

Yields
Experimental studies on catch fuel crops. Annex 1: field experiment 1980, 12:45234 (R;GB)
Experimental studies on catch fuel crops. Annex 2: field experiment 1981, 12:45235 (R;GB)

RADIUM
Waste Disposal
Superfund Record of Decision (EPA Region 8): Denver Radium/ROBCO, Colorado (second remedial action), September 1986. Final report, 12:46205 (R;US)

RADON
Radiation Detectors
Validation of the prompt alpha-track method, 12:46186 (R;US)
Radiation Monitoring
Emanation measurements of materials used in housing building, 12:45859 (RA;DD;In Russian)
Radioecological Concentration
Radon as an in situ tracer in geothermal reservoirs: Final report, 12:45278 (R;US)
Validation of the prompt alpha-track method, 12:46186 (R;US)

RADON 222
Air Pollution Control
Final rule for radon-222 emissions from licensed uranium mill tailings - economic analysis. Final report, 12:45152 (R;US)

RAILGUN ACCELERATORS
Differential Equations
Exact solutions to the governing dynamic equations of plasma armature electromagnetic railguns, 12:45984 (R;US)
Research Programs
Railgun development for EOS [equation-of-state] applications: A status report, 12:45988 (R;US)

RAMAN EFFECT
Multi-Photon Processes
Theoretical atomic and molecular photophysics, 12:46432 (R;US)

RAMJET ENGINES
Liquid Fuels
Transient spray-combustion computations. Report for October 1985-October 1986, 12:45960 (R;US)

RANDOM NUMBER GENERATORS
Components and cycles of a random function, 12:46987 (R;US)
RANDOM NUMBER: A syntax-directed package to produce random numbers in user-specified, univariate distributions: User's guide, 12:46993 (R;US)

RANKINE CYCLE POWER SYSTEMS
Working Fluids
Organic Rankine-cycle power systems working fluids study: Topical report No. 1: Fluorinol 85 (85 mole % trofluoroethanol in water), 12:45900 (R;US)

RAPSODIE REACTOR
Cover Gas
French experience concerning the contamination by inactive and radioactive impurities and the purification of the cover gas of LMFBRs, 12:45349 (RA;XE)

RARE EARTH COMPLEXES

REACTOR INSTRUMENTATION
Signals
An integrated approach for signal validation in nuclear power plants, 12:45383 (R;US)
Functional consistency checking module for signal validation: Topical report, 12:45384 (R;US)

REACTOR LICENSING
Compliance
Integrated safety assessment report, Haddam Neck Plant (Docket No. 50-213): Integrated Safety Assessment Program: Draft report, 12:45493 (R;US)

REACTOR MONITORING SYSTEMS
Measuring and evaluation systems for performance monitoring of reactor or its components. Not to be confused with reactor control systems.
A Codes
ANDAT - an interactive system for use in technical diagnostics of nuclear power plants, 12:45401 (RA;CS;In Czech)
Acoustic Emission Testing
Software conception of acoustic emission system for monitoring failure formation and propagation in material of primary circuit component, 12:45413 (RA;CS;In Czech)
Man-Machine Systems
ANDAT - an interactive system for use in technical diagnostics of nuclear power plants, 12:45401 (RA;CS;In Czech)
Mathematical Models
Algorithmization of neutron noise measurement and evaluation in reactor diagnostics, 12:45400 (RA;CS;In Czech)
Planning
Projects of an in-service diagnostic system, 12:45399 (RA;CS;In Czech)
Software conception of in-service diagnostic systems of nuclear steam-generating facilities, 12:45405 (RA;CS;In Czech)

REACTOR NOISE
Algorithms
Algorithmization of neutron noise measurement and evaluation in reactor diagnostics, 12:45400 (RA;CS;In Czech)
Measuring Methods
^{252}Cf-source-driven neutron noise measurements of subcriticality for a slab tank containing aqueous Pu-U nitrate, 12:45379 (R;US)

REACTOR OPERATION
Data Compilation
Licensee Event Report (LER) compilation for month of July 1987, 12:45377 (R;US)
Operating experience feedback report: New plants, Commercial power reactors, 12:45376 (R;US)
Evaluation
Integrated safety assessment report, Haddam Neck Plant (Docket No. 50-213): Integrated Safety Assessment Program: Draft report, 12:45494 (R;US)
Management
TARMS [Toshiba Advanced Reactor Management System]: An on-line boiling water reactor operation management system, 12:45492 (RA;JP)
Reactor Control Systems
TARMS [Toshiba Advanced Reactor Management System]: An on-line boiling water reactor operation management system, 12:45492 (RA;JP)

REACTOR SAFETY
Evaluation
Integrated safety assessment report, Haddam Neck Plant (Docket No. 50-213): Integrated Safety Assessment Program: Draft report, 12:45494 (R;US)
Research Programs
List of reports in the field of reactor safety research sponsored by BMFT, CEA, EPRI, JSTA and USNRC. Reported period: January 1-March 31, 1987. Progress report, 12:45482 (R;DE;In German)

REACTOR SAFETY EXPERIMENTS
See also NUCLEAR SAFETY PILOT PLANT
Sustained concrete attack by low-temperature, fragmented core debris, 12:45505 (R;US)

RECEIVERS (SOLAR)
See SOLAR RECEIVERS

RECEPTORS
Biological Localization
Localization of an EGF receptor in purified chromosomes from A431 and lymphoblast cells, 12:46242 (J;US)
Enzyme Induction
Repair of DNA treated with λ-irradiation and chemical carcinogens: Progress report, 1983-1987, 12:46239 (R;US)
RECOMBINATION
Of electrons, holes, ions, radicals or atoms.
Cross Sections
Theoretical studies of dissociative recombination, 12:46406 (R;US)
RECORDS MANAGEMENT
Administrative Procedures
A plan for administrative computing at ANL FY1988 through FY1990, 12:46958 (R;US)
Planning
A plan for administrative computing at ANL FY1988 through FY1990, 12:46958 (R;US)
RECREATIONAL AREAS
Space HVAC Systems
Small indoor swimming-pool at Schwalmtal. Space HVAC systems in changing and shower rooms. 4. Interim report, 12:45658 (R;DE;In German)
Swimming Pools

RETINA

Biological Radiation Effects
Biological applications and effects of optical masers. Annual report, 16 March 1985-15 March 1986, 12:46324 (R;US)

RETORTED SHALES
See SPENT SHALES

RETORTING
See also IN-SITU RETORTING

Bench-Scale Experiments
Preliminary results of tar sand pyrolysis with product oil recycling, 12:45034 (RA;US)

By-Products
Separation and detection of sulfur, nitrogen, and arsenic species in oil shale by-product waters using ion chromatography, 12:45060 (RA;US)

Environmental Effects
Distribution of selected elements in oil shale retort products, 12:45069 (RA;US)
Trace element distribution and oil yield associations of oil shale resources, 12:45048 (RA;US)

Gaseous Wastes
Distribution of selected elements in oil shale retort products, 12:45069 (RA;US)

Liquid Wastes
Distribution of selected elements in oil shale retort products, 12:45069 (RA;US)
Leaching of retorted oil shale with complexometric agents, 12:45063 (RA;US)
Retort water characterization and evaluation of treatment methods, 12:45071 (RA;US)
Separation and detection of sulfur, nitrogen, and arsenic species in oil shale by-product waters using ion chromatography, 12:45060 (RA;US)

Mathematical Models
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)

Off-Gas Systems
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)

Process Heat
Technical and economic feasibility of sulfur trioxide retorting of oil shale, 12:45024 (RA;US)

Research Programs
Horizontal low-void retorting of eastern and western oil shale, 12:45020 (RA;US)
Preliminary results of tar sand pyrolysis with product oil recycling, 12:45034 (RA;US)
Technical and economic feasibility of sulfur trioxide retorting of oil shale, 12:45024 (RA;US)

Sweep Efficiency
Horizontal low-void retorting of eastern and western oil shale, 12:45020 (RA;US)

RETORTS

Design
Development of an isothermal pyrolysis apparatus, 12:45044 (RA;US)

Gas Flow
Retorting oil shale rubble with permeability contrasts, 12:45019 (RA;US)

Gaseous Wastes
Off-gas characterization and cleanup for simulated in situ retorting experiments, 12:45059 (RA;US)

Hot Gas Cleanup
Off-gas characterization and cleanup for simulated in situ retorting experiments, 12:45059 (RA;US)

Permeability
Retorting oil shale rubble with permeability contrasts, 12:45019 (RA;US)

RF SYSTEMS

Pulse Techniques
Theory and applications of maps on SO(3) in nuclear magnetic resonance, 12:46129 (R;US)

RHENIUM ALLOYS

Phase Studies
Formation of metastable structures and amorphous phases in Pu-based systems using the triode sputtering technique, 12:45739 (R;US)

RHENIUM COMPLEXES

Catalytic Effects
Transition metal activation and functionalization of C-H [carbon-hydrogen] bonds: Progress report for period June 1, 1986-November 30, 1987, 12:45905 (R;US)

X-Ray Spectroscopy
EXAFS spectroelectrochemistry of coordination complexes in non-aqueous solutions, 12:45876 (BA;US)
RHENIUM FLUORIDES
Formation Heat
Thermodynamics of sublimation of rhenium tetra- and pentafluoride, 12:45926 (RA;SU;In Russian)
Sublimation Heat
Thermodynamics of sublimation of rhenium tetra- and pentafluoride, 12:45926 (RA;SU;In Russian)
RHODIUM COMPLEXES
Catalytic Effects
Transition metal activation and functionalization of C-H [carbon-hydrogen] bonds: Progress report for period June 1, 1986-November 30, 1987, 12:45905 (R;US)
RHODOPSIN
Biochemical Reaction Kinetics
Effect of cross linkers on the bacteriorhodopsin photocycle, 12:46241 (J;US)
Photochemistry
Hexatrienes. Investigations of ground state vibrational spectroscopy, triplet sensitized photo-isomerization, and structure, kinetics, and dynamics of the lowest excited triplet state, 12:45944 (R;DK)
RIBULOSE DIPHOSPHATE CARBOXYLASE
Biological Variability
Biochemical and physiological characterization of higher plants with reduced photorespiration: Final report for period May 25, 1981-May 24, 1985, 12:45231 (R;US)
Conformational Changes
Biochemical and physiological characterization of higher plants with reduced photorespiration: Final report for period May 25, 1981-May 24, 1985, 12:45231 (R;US)
Electrophoresis
Biochemical and physiological characterization of higher plants with reduced photorespiration: Final report for period May 25, 1981-May 24, 1985, 12:45231 (R;US)

ROSE BENGAL
Iodination
Fast radioiodination of rose bengal at room temperature, 12:45952 (R;ZA)
Labelling
Fast radioiodination of rose bengal at room temperature, 12:45952 (R;ZA)
ROTATING PLASMA
Ballooning Instability
Second regime tokamak operation at large aspect ratio, 12:46848 (R;US)
Equilibrium
Second regime tokamak operation at large aspect ratio, 12:46848 (R;US)
Mathematical Models
Second regime tokamak operation at large aspect ratio, 12:46848 (R;US)
ROTORS
Stability
Design, testing and commissioning of the reinjection centrifugal compressors for the Alrar gas treatment plant, 12:45008 (RA;GB)

RUBIDIUM
Atom-Molecule Collisions
State changing in collisions of Rb(ns) Rydberg atoms with HF, 12:46444 (J;US)
RURAL AREAS
Aerosols
Characteristics of individual particles at a rural site in the eastern United States, 12:46167 (R;US)
Particulates
Characteristics of individual particles at a rural site in the eastern United States, 12:46167 (R;US)
RUTHENIUM
Catalytic Effects
Catalytic methods for improved coal liquefaction and hydrotreating: Quarterly report No. 7 for the period March 23, 1987 through June 22, 1987, 12:44851 (R;US)
RUTHENIUM COMPLEXES
Catalytic Effects
Transition metal activation and functionalization of C-H [carbon-hydrogen] bonds: Progress report for period June 1, 1986-November 30, 1987, 12:45905 (R;US)
Chemistry
Inorganic chemistry, 12:45903 (RA;ZA)
Molecular Structure
Structural chemistry, 12:45902 (RA;ZA)
Vibrational spectroscopic characterization of the CCO ligand and the possible occurrence of CCO on surfaces, 12:45933 (J;US)
Photolysis
An investigation of the photochemical properties of transition metal arene complexes: Final report for the period July 1, 1983 to June 30, 1987, 12:45943 (R;US)
Raman Spectra
Vibrational spectroscopic characterization of the CCO ligand and the possible occurrence of CCO on surfaces, 12:45933 (J;US)
X-Ray Spectroscopy
Application of EXAFS spectroelectrochemsitry to structural studies of electroactive species immobilized on polymer coated electrodes, 12:45936 (BA;US)
RUTHENIUM FLUORIDES
Affinity
Mass-spectrum study of ion-molecular equilibria with the participation of higher fluorides of ruthenium and platinum, 12:45923 (RA;SU;In Russian)
Reaction Heat
Mass-spectrum study of ion-molecular equilibria with the participation of higher fluorides of ruthenium and platinum, 12:45923 (RA;SU;In Russian)
RUTHENIUM OXIDES
Electronic Structure
DSA RuO_2/TiO_2 electrode modeled by ion implantation: An in situ characterization by photoacoustic and photocurrent spectroscopy, 12:45808 (R;US)
Optical Properties
DSA RuO_2/TiO_2 electrode modeled by ion implantation: An in situ characterization by photoacoustic and photocurrent spectroscopy, 12:45808 (R;US)
Phase Transformations

SAVANNAH RIVER PLANT
Measuring Instruments
Controlled, economical and reliable volume measurement system for the laboratory, 12:46126 (R;US)
Radioactive Waste Disposal
Overview: Defense high-level waste technology program, 12:45147 (BA;US)
Radioactive Waste Processing
Overview: Defense high-level waste technology program, 12:45147 (BA;US)
Processing and disposal of defense nuclear waste at the Savannah river plant, 12:45146 (BA;US)
Radioactive Waste Storage
Overview: Defense high-level waste technology program, 12:45147 (BA;US)
Underground Facilities
Greater Confinement Disposal trench and borehole operations status, 12:45121 (R;US)
Wetlands
Correlation between aircraft MSS and LIDAR remotely sensed data on a forested wetland in South Carolina, 12:46233 (R;US)
SCALAR FIELDS
Vacuum States
Vacuum state of complex scalar fields in SO(2,1)-invariant backgrounds, 12:46616 (J;US)
SCANDIUM ALLOYS
Formation Heat
Thermodynamic characteristics of aluminium-scandium and zirconium-silicon binary alloys, 12:45720 (RA;SU;In Russian)
Solution Heat
Thermodynamic characteristics of aluminium-scandium and zirconium-silicon binary alloys, 12:45720 (RA;SU;In Russian)
SCANDIUM COMPOUNDS
Chemical Reactions
Evaluation of laser desorbed transition-metal ions as analytical chemical ionization reagents by pattern recognition, 12:45870 (J;US)
SCANNERS (IMAGE)
See IMAGE SCANNERS
SCATTERING
Cross Sections
XCOM: Photon cross sections on a personal computer, 12:46428 (R;US)
SCHOOL BUILDINGS
Air Conditioning
Marketing heat pumps: a class product, 12:45633 (RA;US)
Energy Consumption
Electricity consumption in schools, 12:45662 (R;DK;In Danish)
Space Heating
Marketing heat pumps: a class product, 12:45633 (RA;US)
SCHROEDINGER EQUATION
Algorithms
Algorithm for integrating the Schroedinger equation, 12:46700 (J;US)
SCHWARZSCHILD FIELD
See SCHWARZSCHILD METRIC
SCHWARZSCHILD METRIC
Cosmological Constant
New class of spherically symmetric interior solution with cosmological constant Λ, 12:46823 (R;XA)
SCHWARZSCHILD SOLUTION
See SCHWARZSCHILD METRIC
SCHWARZSCHILD SPACE
See SCHWARZSCHILD METRIC
SCHWINGER FUNCTIONAL EQUATIONS
Gauge Invariance
Schwinger models in arbitrary gauges and at finite temperature, 12:46604 (R;XA)
SCINTIGRAPHY
See SCINTISCANNING
SCINTILLATION CHAMBERS
See SCINTILLATION COUNTERS
SCINTILLATION COUNTERS
See also LIQUID SCINTILLATION DETECTORS
SOLID SCINTILLATION DETECTORS
Computerized Simulation
LIGHT: A ray tracing code to simulate light collection in scintillation spectrometers and light pipes, 12:46120 (R;US)
SCINTILLATION COUNTING
Beta Spectrometers
Computerized liquid scintillation assay of tritiated water and wipe test samples with a three-channel beta spectrometer, 12:45856 (RA;IL)
SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS
SCINTISCANNING
Nuclear Medicine
VIIIth international symposium on nuclear medicine. Abstracts, 12:46255 (R;CS)
SCOTLAND
See UNITED KINGDOM
SEA DISPOSAL
See MARINE DISPOSAL
SEALS
Friction
Thermomechanical effects in high-speed seal rubs. Final report, 26 February 1979-31 December 1984, 12:45979 (R;US)
Mathematical Models
Thermomechanical effects in high-speed seal rubs. Final report, 26 February 1979-31 December 1984, 12:45979 (R;US)
SEBACEOUS GLANDS
See SKIN
SECONDARY BATTERIES
See ELECTRIC BATTERIES

SECONDARY RECOVERY
See ENHANCED RECOVERY
SECOND-CLASS CURRENTS
Reviews
Second class current effects in tau lepton decay?, 12:46499 (RA;US)
SECRECY PROTECTION
Measures, regulations or orders established to protect the secrecy of certain places, installations, or offices.
Strong practical protocols, 12:45167 (R;US)
SECURITY
See also NATIONAL SECURITY
Inspection
What are the attributes of a good standard and associated criteria?, 12:45158 (R;US)
SEDIMENTS
Detritus
Source, composition, and flux of organic detritus in lower Cook Inlet. Final report, 12:44998 (R;US)
SEISMIC ARRAYS
Design
Capabilities of seismic networks and their design. Technical report for the period 1 January-31 March 1987, 12:46158 (R;US)
SEISMIC DETECTION
Finite-difference modeling of seismological problems in magnitude estimation using body waves, surface waves, and seismic source imaging. Final report, 11 February 1985-10 February 1987, 12:46304 (R;US)
SEISMIC EFFECTS
Research Programs
Component Fragility Research Program: Phase 1, Demonstration tests: Volume 1, Summary report, 12:45509 (R;US)
Component Fragility Research Program: Phase 1, Demonstration tests: Volume 2, Appendices, 12:45510 (R;US)
SEISMIC NOISE
Temperature Effects
Acoustic emission and wave propagation monitoring at the spent fuel test: Climax, Nevada, 12:45113 (J;GB)
SEISMOLOGY
Research Programs
CSDP: The seismology of continental thermal regimes: Final report for period April 1, 1986-April 1, 1987, 12:46332 (R;US)
SELENITES
Activation Analysis
Simultaneous determination of selenite and trimethylselenonium ions in urine by anion exchange chromatography and molecular neutron activation analysis, 12:45862 (J;US)
Ion Exchange Chromatography
Simultaneous determination of selenite and trimethylselenonium ions in urine by anion exchange chromatography and molecular neutron activation analysis, 12:45862 (J;US)
SELENIUM
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
SELENIUM COMPOUNDS
See also SELENITES
Activation Analysis
Simultaneous determination of selenite and trimethylselenonium ions in urine by anion exchange chromatography and molecular neutron activation analysis, 12:45862 (J;US)
Ion Exchange Chromatography
Simultaneous determination of selenite and trimethylselenonium ions in urine by anion exchange chromatography and molecular neutron activation analysis, 12:45862 (J;US)
SELENIUM IONS
Electron-Ion Collisions
Resonance enhancement of electron collision rates for fluorinelike ions, 12:46445 (J;US)
Inner-Shell Ionization
X-ray gain in neonlike ions from inner-shell ionization of sodiumlike ions by suprathermal electrons, 12:46011 (J;US)
X-Ray Spectra
X-ray gain in neonlike ions from inner-shell ionization of sodiumlike ions by suprathermal electrons, 12:46011 (J;US)
SEMICONDUCTOR DEVICES
See also SEMICONDUCTOR DIODES
SEMICONDUCTOR LASERS
SEMICONDUCTOR RESISTORS
Ohmic contacting schemes to gallium arsenide devices, 12:45819 (R;US)
Meetings
Stability of amorphous silicon alloy materials and devices, 12:46038 (B;US)
Physical Radiation Effects
Development of a theoretical model for annealing of radiation damage in semiconductor devices. Quarterly report, 8 March-8 June 1987, 12:45814 (R;US)
Heavy ion induced upsets in semiconductor devices, 12:45805 (R;US)
Variations in semiconductor device response in a medium-energy x-ray dose-enhancing environment, 12:46123 (R;US)
Response Functions
Variations in semiconductor device response in a medium-energy x-ray dose-enhancing environment, 12:46123 (R;US)
SEMICONDUCTOR DIODES
See also JUNCTION DIODES
Fabrication
[High energy semiconductor switch]: Second quarterly technical report, May 24, 1987 to August 24, 1987, 12:46028 (R;US)
Testing
[High energy semiconductor switch]: Second quarterly technical report, May 24, 1987 to August 24, 1987, 12:46028 (R;US)
SEMICONDUCTOR LASERS
Crystal Doping
Blue-green laser-diode research program. Revision. Quarterly Progress report No. 4, 1 January-31 March 1987, 12:45998 (R;US)
Efficiency
Efficient side-lobe suppression of laser-diode arrays, 12:46001 (R;US)
SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Electronic Structure
Electronic structure calculation of amorphous solid, 12:46801 (J;US)
Functionals of the ground-state energy and the band gaps of semiconductors and insulators, 12:46790 (J;US)
Self-energy shifts in heavily doped, polar semiconductors, 12:46789 (J;US)
Illuminance
The transient and periodic illumination of a semiconductor - semiconductor-electrolyte interface, 12:45249 (J;US)
Ion Implantation
Near-surface defect profiling with slow positrons, 12:46754 (RA;DD)
Physical Radiation Effects
Defects in semiconductor compounds, 12:46753 (RA;DD)
Irradiation induced defects in semiconductor compounds, 12:46776 (RA;DD)
Self-Energy
Self-energy shifts in heavily doped, polar semiconductors, 12:46789 (J;US)
Vacancies
Near-surface defect profiling with slow positrons, 12:46754 (RA;DD)

SEMICONDUCTOR RESISTORS
Chemical Preparation
Process for the chemical preparation of high-field ZNO varistors, 12:45846 (P;US)
SET THEORY
Algorithms
Un-Skolemizing clause sets, 12:46956 (R;US)
SEVERN RIVER
Tidal Power
Steel caissons for the Severn Barrage, 12:45294 (R;GB)
SHALE MINING
See OIL SHALE MINING
SHALE OIL
By-Products
Modification of petroleum asphalts with shale oil residues, 12:45058 (RA;US)
Chemical Composition
Spectrographic analyses of nitrogen fractions from a geokinetics shale oil distillate and a hydroprocessed intermediate, 12:45051 (RA;US)
Cost
Transportation fuels and engines for optimum energy utilization: An assessment of energy consumption from resources through end use: Final report, Volume 1, 12:45707 (R;US)
Denitrification
Nitrogen compound types in hydrotreated shale oils, 12:45050 (RA;US)
Hydrocracking
Nitrogen compound types in hydrotreated shale oils, 12:45050 (RA;US)
Spectrographic analyses of nitrogen fractions from a geokinetics shale oil distillate and a hydroprocessed intermediate, 12:45051 (RA;US)
Jet Engine Fuels
Capillary GC (gas chromatography) detection methods for nitrogen and sulfur compounds in shale-derived jet-propulsion fuels. Final report, March 1985-March 1986, 12:45057 (R;US)
Nitrogen Compounds
Modification of petroleum asphalts with shale oil residues, 12:45058 (RA;US)
Nitrogen compound types in hydrotreated shale oils, 12:45050 (RA;US)
Spectrographic analyses of nitrogen fractions from a geokinetics shale oil distillate and a hydroprocessed intermediate, 12:45051 (RA;US)
Quantitative Chemical Analysis
Selected elemental distributions as determined by reference retorting of oil shale and possible correlation with Fischer assay oil yield, 12:45056 (R;US)
Solvent Extraction
Supercritical fluid extraction of oil shale, 12:45023 (RA;US)
Thermal Cracking
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)
Waste Product Utilization
Modification of petroleum asphalts with shale oil residues, 12:45058 (RA;US)
SHEATHS (FUEL)
See FUEL CANS
SHELLS (CONTAINMENT)
See CONTAINMENT SHELLS
SHF RADIATION
See RADIOWAVE RADIATION
SHIELDING
Computer Calculations
Computerized system based on an IBM PC for radiation shielding calculations, 12:46706 (RA;IL)
Design
Fusion reactor physics and technology studies: Final report, December 1, 1985 to June 15, 1986, 12:46907 (R;US)
SHIELDING MATERIALS
Computer Calculations
Electron transport calculations with biomedical and environmental applications: [Progress report, FY 1987], 12:46277 (R;US)
SHIELDS
Design
Optimization in FBR shielding design, 12:45371 (RA;JP)
SHIPMENT
See TRANSPORT
SHIPS
Propulsion
Need for windship research in Europe, 12:45306 (R;GB)
Research Programs
Need for windship research in Europe, 12:45306 (R;GB)
Wind Power
Need for windship research in Europe, 12:45306 (R;GB)
SHOCK WAVES
Chemical Reaction Kinetics
Visible emission from granular explosives during shock initiation, 12:46151 (R;US)
Computer Calculations
Modeling shockwave deformation via molecular dynamics, 12:46978 (R;US)
Computerized Simulation
Modeling shockwave deformation via molecular dynamics, 12:46978 (R;US)
Mathematical Models
Why linear Birch and U/sub s/-U/sub p/ expansions work, 12:46785 (R;US)
Velocity
The equation of state of PETN detonation products, 12:46153 (R;US)
SHOTFIRING
See EXPLOSIVE FRACTURING
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Calibration
Physics calibration of the Soudan II nucleon decay experiment using BNL neutrinos, 12:46106 (RA;US)
SHUTTERS
Design
Development of a large-aperture PLZT shutter with enhanced operational/environmental capabilities, 12:46040 (BA;US)
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIGMA MINUS
Electromagnetic Form Factors
Sigma minus form factors and magnetic moment, 12:46529 (BA;US)
Magnetic Moments
Sigma minus form factors and magnetic moment, 12:46529 (BA;US)
Semileptonic Decay
Sigma minus form factors and magnetic moment, 12:46529 (BA;US)
SIGMA MODEL
Invariance Principles
σ model approach to the heterotic string theory, 12:46635 (BA;US)
Nonlinear Problems
σ model approach to the heterotic string theory, 12:46635 (BA;US)
Torsion in superstrings, 12:46634 (BA;US)
String Models
σ model approach to the heterotic string theory, 12:46635 (BA;US)
Torsion in superstrings, 12:46634 (BA;US)
Supersymmetry
σ model approach to the heterotic string theory, 12:46635 (BA;US)
Torsion in superstrings, 12:46634 (BA;US)
SIGNALS
Validation
An integrated approach for signal validation in nuclear power plants, 12:45383 (R;US)
Functional consistency checking module for signal validation: Topical report, 12:45384 (R;US)

SILANES
Chemical Reactions
The applicability of equilibrium calculations to dichlorosilane CVD [chemical vapor deposition], 12:45816 (R;US)
SILICA
Agglomeration
Slow aggregation of colloidal silica, 12:45830 (J;US)
Deposition
High damage threshold optical coatings, 12:45848 (BA;US)
Dielectric Properties
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Dusts
Health-hazard evaluation report HETA 84-186-1777, Sancap Abrasives, Inc., Alliance, Ohio, 12:46172 (R;US)
Electric Contacts
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Electronic Structure
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Interfaces
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
SiO_2/Si interface probed with a variable-energy positron beam, 12:45832 (J;US)
Optical Properties
High damage threshold optical coatings, 12:45848 (BA;US)
Physical Radiation Effects
Time to failure in single-pulse laser-induced damage, 12:46026 (BA;US)
Positron Collisions
SiO_2/Si interface probed with a variable-energy positron beam, 12:45832 (J;US)
SILICATES
Dielectric Properties
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Electric Contacts
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Electronic Structure
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Impact Shock
Shock-chemistry in natural materials and evolution of planetary surfaces, 12:46381 (R;US)
Interfaces
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Piezoelectricity
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Pyroelectric Effect
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Structural Chemical Analysis
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Weathering
Shock-chemistry in natural materials and evolution of planetary surfaces, 12:46381 (R;US)
SILICEOUS ROCK
See SANDSTONES
SILICON
A Centers
Pressure dependence of deep electronic levels in semiconductors: The oxygen-vacancy pair (or A center) in silicon, 12:45835 (J;US)
Atom Transport
CO_2 laser processing of diffusion induced lattice imperfections in silicon: Experiment and theory, 12:45829 (J;US)
Charge Carriers
Refinements in the determination of minority-carrier diffusion length measurements of polycrystalline silicon materials by the surface photovoltage method, 12:45824 (J;US)
Charged-Particle Transport
Refinements in the determination of minority-carrier diffusion length measurements of polycrystalline silicon materials by the surface photovoltage method, 12:45824 (J;US)
Chemical Vapor Deposition
The applicability of equilibrium calculations to dichlorosilane CVD [chemical vapor deposition], 12:45816 (R;US)
Crystal Defects
Defect characteristics in different crystallographic directions in CZ-Si as a function of doping and annealing, 12:46766 (RA;DD)
Light-induced positron studies of defects in amorphous silicon, 12:46769 (RA;DD)
Crystal Doping
CO_2 laser processing of diffusion induced lattice imperfections in silicon: Experiment and theory, 12:45829 (J;US)
Crystal Growth
The applicability of equilibrium calculations to dichlorosilane CVD [chemical vapor deposition], 12:45816 (R;US)
Crystallization
Solidification of highly undercooled liquid silicon produced by pulsed laser melting of ion-implanted amorphous silicon: Time-resolved and microstructural studies, 12:45841 (J;US)
Deep Level Transient Spectroscopy
Pressure dependence of deep electronic levels in semiconductors: The oxygen-vacancy pair (or A center) in silicon, 12:45835 (J;US)
Dielectric Properties
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Electric Contacts
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Electronic Structure
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Epitaxy
The applicability of equilibrium calculations to dichlorosilane CVD [chemical vapor deposition], 12:45816 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Grain Size
Nanocrystalline metals and semiconductors studied by positron lifetime, 12:46760 (RA;DD)
Inelastic Scattering
Resolution analyses for Moessbauer diffraction: resolved TDS profiles in silicon, 12:46803 (J;US)
Interfaces
Electronic properties of sol-gel-derived oxides on silicon, 12:45826 (J;US)
SiO_2/Si interface probed with a variable-energy positron beam, 12:45832 (J;US)
Ion Implantation
Solidification of highly undercooled liquid silicon produced by pulsed laser melting of ion-implanted amorphous silicon: Time-resolved and microstructural studies, 12:45841 (J;US)
Meetings
Stability of amorphous silicon alloy materials and devices, 12:46038 (B;US)

Melting
Solidification of highly undercooled liquid silicon produced by pulsed laser melting of ion-implanted amorphous silicon: Time-resolved and microstructural studies, 12:45841 (J;US)
Microstructure
Solidification of highly undercooled liquid silicon produced by pulsed laser melting of ion-implanted amorphous silicon: Time-resolved and microstructural studies, 12:45841 (J;US)
Oxidation
Voltammetric investigation of porous silicon for integrated circuit applications, 12:46033 (R;US)
Oxygen Additions
Defects and oxygen in silicon, 12:46752 (RA;DD)
Passivation
Wide bandgap passivation layers on silicon, 12:45228 (R;US)
Phonons
Renormalized acoustic branch in the vibrational spectrum of the π-bonded—chain model of Si(111)21, 12:45845 (J;US)
Photovoltaic Effect
Refinements in the determination of minority-carrier diffusion length measurements of polycrystalline silicon materials by the surface photovoltage method, 12:45824 (J;US)
Physical Radiation Effects
CO_2 laser processing of diffusion induced lattice imperfections in silicon: Experiment and theory, 12:45829 (J;US)
Thermal effect observed by positron annihilation techniques in electron irradiated silicon, 12:46767 (RA;DD)
Porosity
Voltammetric investigation of porous silicon for integrated circuit applications, 12:46033 (R;US)
Positron Collisions
SiO_2/Si interface probed with a variable-energy positron beam, 12:45832 (J;US)
Self-Diffusion
Comment on "Diffusion without vacancies or interstitials: A new concerted exchange mechanism", 12:45844 (J;US)
Solidification
Solidification of highly undercooled liquid silicon produced by pulsed laser melting of ion-implanted amorphous silicon: Time-resolved and microstructural studies, 12:45841 (J;US)
Vacancies
Defects and oxygen in silicon, 12:46752 (RA;DD)

SILICON 28
Hypernuclei
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)

SILICON 28 TARGET
Neutron Reactions
Annual progress report on nuclear data, 1986, 12:46678 (R;BE)
Pion Plus Reactions
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)

SILICON 30 TARGET
Pion Plus Reactions
Double charge exchange to the double isobaric analog state at T/sub π/—292 MeV, 12:46661 (J;US)

SILICON ALLOYS
Formation Heat
Thermodynamic characteristics of aluminium-scandium and zirconium-silicon binary alloys, 12:45720 (RA;SU;In Russian)
Phase Studies
Formation of metastable structures and amorphous phases in Pu-based systems using the triode sputtering technique, 12:45739 (R;US)
Solution Heat
Thermodynamic characteristics of aluminium-scandium and zirconium-silicon binary alloys, 12:45720 (RA;SU;In Russian)

SILICON CARBIDES
Erosion
Erosion of hard material coating systems, 12:45793 (BA;US)
Fine Structure
EXELFS [Extended Electron Energy Loss Fine Structure] of amorphous and crystalline SiC (Extended Electron Energy Loss Fine Structure), 12:46726 (R;US)
Fracture Mechanics
Wear of an alumina-silicon carbide whisker composite, 12:45794 (BA;US)
Porosity
Advanced ultrasonic NDE methods for characterizing porosity in SiC, 12:45791 (B;US)
Powder Metallurgy
Processing of laser formed SiC powder. Final report, 12:45770 (R;US)
Thermodynamic Properties
Erosion of hard material coating systems, 12:45793 (BA;US)
Ultrasonic Testing
Advanced ultrasonic NDE methods for characterizing porosity in SiC, 12:45791 (B;US)
Wear
Wear of an alumina-silicon carbide whisker composite, 12:45794 (BA;US)
Wear Resistance
Erosion of hard material coating systems, 12:45793 (BA;US)

SILICON CHLORIDES
Chemical Reactions
The applicability of equilibrium calculations to dichlorosilane CVD [chemical vapor deposition], 12:45816 (R;US)
Surfaces
The applicability of equilibrium calculations to dichlorosilane CVD [chemical vapor deposition], 12:45816 (R;US)

SILICON HYDRIDES
See SILANES

SILICON IONS
Ion-Atom Collisions
Calculations of coincident ionization plus excitation, 12:46470 (J;NL)
X-Ray Spectra
Ion-induced X-ray studies with a high luminosity von Hamos crystal spectrometer, 12:46122 (J;NL)

SILICON NITRIDES
Defects
Failure prediction of hot-pressed Si/sub 3/N/sub 4/ ceramics by NDE, 12:45790 (B;US)
Hot Pressing
Failure prediction of hot-pressed Si/sub 3/N/sub 4/ ceramics by NDE, 12:45790 (B;US)
Industrial Radiography
Failure prediction of hot-pressed Si/sub 3/N/sub 4/ ceramics by NDE, 12:45790 (B;US)
Ultrasonic Testing
Failure prediction of hot-pressed Si/sub 3/N/sub 4/ ceramics by NDE, 12:45790 (B;US)

SILICON OXIDES
See also QUARTZ
SILICA
Electronic Structure
Electronic structure of (Na_2O)/sub x/(SiO_2)/sub 1-x/ glasses, 12:45935 (J;US)

SILICON SOLAR CELLS
Efficiency
Characteristic improvement of amorphous silicon solar cell for indoor use, 12:45244 (R;JP)
Meetings
Stability of amorphous silicon alloy materials and devices, 12:46038 (B;US)
Passivation
Wide bandgap passivation layers on silicon, 12:45228 (R;US)

SILVER
Absorption Spectra
Plasmon resonance absorption in layered structures of silver with periodic corrugation, 12:46727 (R;US)
Antiproton Reactions
Observation of antiproton annihilation in heavy nuclei at 100 GeV/c, 12:46660 (R;US)
Electron-Ion Collisions
Resonance enhancement of electron collision rates for fluorinelike ions, 12:46445 (J;US)
Emission Spectroscopy
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Surface Properties
Plasmon resonance absorption in layered structures of silver with periodic corrugation, 12:46727 (R;US)

SILVER 110
Biological Localization
Influence of certain chemical substances on the accumulation of radioactive silver and cobalt in rats, 12:46297 (RA;DD;In Russian)
SILVER ALLOYS
Electronic Specific Heat
Ce(Cu/sub 0.9/Ag/sub 0.1/)$_6$: Highest electronic specific-heat coefficient of the heavy-fermion systems, 12:45750 (J;US)
Kondo Effect
Ce(Cu/sub 0.9/Ag/sub 0.1/)$_6$: Highest electronic specific-heat coefficient of the heavy-fermion systems, 12:45750 (J;US)
Magnetic Susceptibility
Ce(Cu/sub 0.9/Ag/sub 0.1/)$_6$: Highest electronic specific-heat coefficient of the heavy-fermion systems, 12:45750 (J;US)
Precipitation
Positron annihilation study of clustering of Ag atoms in quenched Al-1 at% Ag alloy, 12:46763 (RA;DD)
SIMS
See MASS SPECTROSCOPY
SKELETON
Radiation Doses
Specific absorbed fractions of energy at various ages from internal photon sources: 3, Five-year-old, 12:46716 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 4, Ten-year-old, 12:46717 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 1, Methods, 12:46714 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 5, Fifteen-year-old male and adult female, 12:46718 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 6, Newborn, 12:46719 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 7, Adult male, 12:46720 (R;US)
Specific absorbed fractions of energy at various ages from internal photon sources: 2, One-year-old, 12:46715 (R;US)
SKIN
Decontamination
Dose calculation for contamination of the skin using the computer code VARSKIN, 12:46295 (R;US)
Radiation Doses
Dose calculation for contamination of the skin using the computer code VARSKIN, 12:46295 (R;US)
Surface Contamination
Dose calculation for contamination of the skin using the computer code VARSKIN, 12:46295 (R;US)
SLAGS
Leaching
Results of leaching experiments conducted on samples from the Tono I UCG cavity, 12:44838 (R;US)
SLC
See STANFORD LINEAR COLLIDER
SLUDGES
Health Hazards
Health-hazard evaluation report HETA 86-132-1780, Alyeska Pipeline Service Company, Valdez, Alaska, 12:45006 (R;US)
SLUGS (FUEL)
See FUEL RODS
SLURRIES (FUEL)
See FUEL SLURRIES
SMOKES
See also TOBACCO SMOKES
Qualitative Chemical Analysis
Combined use of GC/MI/FTIR and GC/MS in the analyses of complex environmental samples, 12:45885 (BA;US)
Quantitative Chemical Analysis
Combined use of GC/MI/FTIR and GC/MS in the analyses of complex environmental samples, 12:45885 (BA;US)
SODA ASH
See SODIUM CARBONATES
SODIUM
Absorption Spectroscopy
Degenerate four-wave mixing in an analytical flame, 12:45879 (BA;US)
Atom-Molecule Collisions
Reactive scattering of electronically excited alkali atoms with molecules, 12:46427 (R;US)
Chemical Reaction Kinetics
Reactive scattering of electronically excited alkali atoms with molecules, 12:46427 (R;US)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Laser Spectroscopy
Low-pressure laser spectroscopy with flame atomization, 12:45866 (J;US)
Spectroscopy
Fiber optic sensor engineering: no trivial matter, 12:45882 (BA;US)
SODIUM CARBONATES
Performance Testing
Flue gas desulphurization by dry injection - pilot scale tests, 12:44904 (R;XU)
SODIUM CHLORIDES
Electric Conductivity
Electronic conduction in molten sodium chloride (As function of Na activity at 850 and 900°C), 12:45940 (R;US)
Sorptive Properties
Room-temperature luminescence properties of rho-aminobenzoic acid adsorbed on sodium acetate-sodium chloride mixtures, 12:45947 (J;US)
SODIUM CITRATES
See SODIUM COMPOUNDS
SODIUM COMPOUNDS
See also SODIUM CARBONATES
SODIUM CHLORIDES
SODIUM OXIDES
SODIUM SULFIDES
Sorptive Properties
Room-temperature luminescence properties of rho-aminobenzoic acid adsorbed on sodium acetate-sodium chloride mixtures, 12:45947 (J;US)
SODIUM IODIDE DETECTORS
See NAI DETECTORS
SODIUM LAURYL SULFATES
See SODIUM COMPOUNDS
SODIUM OXIDES
Electronic Structure
Electronic structure of (Na_2O)/sub x/(SiO_2)/sub 1-x/ glasses, 12:45935 (J;US)
SODIUM SULFIDES
Thermodynamic Activity
Sodium- and sulfur-activity measurements using glass-membrane reference electrodes/sensors, 12:45520 (R;US)
SODIUM-SULFUR BATTERIES
Electrolytes
Sodium- and sulfur-activity measurements using glass-membrane reference electrodes/sensors, 12:45520 (R;US)
SOILS
Biodegradation
Detection of a microbial consortium, including type 2 methanotrophs, by use of phospholipid fatty acids in an aerobic halogenated hydrocarbon-degrading soil column enriched with natural gas, 12:46226 (R;US)
Contamination
Estimating volume of contaminated soil for excavation: A quick and simple method, 12:46203 (R;US)
Marine Disposal
Fate and bioaccumulation of soil-associated low-level naturally occurring radioactivity following disposal into a marine ecosystem. Final report, 12:46232 (R;US)
Pollutants
Morton arboretum bioassays: earthworm bioassay procedures to evaluate the extent of aerially dispersed lead and cadmium in an urban arboretum, 12:46160 (R;NL)
Pollution
Processes affecting subsurface transport of leaking underground-storage-tank fluids, 12:46225 (R;US)

Quantitative Chemical Analysis
Surface-enhanced Raman spectrometry of organophosphorus chemical agents, 12:45864 (J;US)
Radioactivity
Fate and bioaccumulation of soil-associated low-level naturally occurring radioactivity following disposal into a marine ecosystem. Final report, 12:46232 (R;US)
Radionuclide Migration
Comparison of dissolution techniques for various natural matrix standards, 12:46207 (BA;US)
Simulation of ion movement in soil using a continuous-time Markov process, 12:46228 (RA;US)
Statistical Models
Statistical model for horizontal mass flux of erodible soil, 12:46198 (R;XA)

SOLAR ACTIVITY
See also FACULAE
SOLAR FLARES
SOLAR RADIO BURSTS
SOLAR WIND
Imaging of coronal mass ejections by the HELIOS spacecraft, 12:46353 (R;US)
Microwave Spectra
Microwave spectroscopy of a solar-active region observed during a partial eclipse. Final report, 1 January 1984-31 December 1985, 12:46347 (R;US)
Solar Flares
Working Group C report on short-term solar predictions, 12:46345 (R;US)

SOLAR ATMOSPHERE
See also HELIOSPHERE
PHOTOSPHERE
Interferometry
Application of the Knox-Thompson method to solar observations, 12:46346 (R;US)

SOLAR CELL RECEIVERS
See SOLAR RECEIVERS

SOLAR CELLS

INDIUM SELENIDE SOLAR CELLS
SILICON SOLAR CELLS
National technical report (Matsushita Electric Industrial Company), Vol. 32, No. 5, October 1986, 12:45522 (R;JP)
Research Programs
Current status of photovoltaic research at SERI, 12:45251 (BA;US)

SOLAR COLLECTORS
See also FLAT PLATE COLLECTORS
Design
Development of a stand-alone photovoltaic collector system using Fresnel lens air-cooled concentrators, 12:45269 (BA;CA)
Performance Testing
Development of a stand-alone photovoltaic collector system using Fresnel lens air-cooled concentrators, 12:45269 (BA;CA)

SOLAR CONCENTRATORS
Comparative Evaluations
Flat-plate versus concentrator photovoltaic systems-Comparative insolation energy production and economic analysis, 12:45268 (BA;CA)
Design
Development of a crossed lens photovoltaic concentrator, 12:45270 (BA;CA)
Performance Testing
Flat-plate versus concentrator photovoltaic systems-Comparative insolation energy production and economic analysis, 12:45268 (BA;CA)
Photovoltaic concentrator array evaluation, 12:45256 (BA;CA)

SOLAR CORONA
Mass Transfer
Imaging of coronal mass ejections by the HELIOS spacecraft, 12:46353 (R;US)
Mathematical Models
Physics of the inner heliosphere: Mechanisms, models and observational signatures. Semiannual progress reports, 1 May 1986-30 April 1987, 12:46370 (R;US)
Solar Activity
Imaging of coronal mass ejections by the HELIOS spacecraft, 12:46353 (R;US)
Thermodynamics
Physics of the inner heliosphere: Mechanisms, models and observational signatures. Semiannual progress reports, 1 May 1986-30 April 1987, 12:46370 (R;US)

SOLAR CYCLE
Energy Transfer
Atmospheric structure variations: modeling of atmospheric structure, 70 - 130 km. Final report, 1 January 1984-31 December 1986, 12:46400 (R;US)

SOLAR FLARES
Forecasting
Working Group C report on short-term solar predictions, 12:46345 (R;US)
Shock Waves
Application of the blast waves in the solar wind concept to major interplanetary shocks during the Solar Maximum Year (SMY), 12:46349 (R;US)

SOLAR NEUTRINOS
Prior to July, 1975 information was indexed to NEUTRINOS.
Neutrino Oscillation
Matter oscillations and solar neutrinos: A review of the MSW effect, 12:46526 (BA;US)
Resonant neutrino oscillations within the solar interior, 12:46525 (BA;US)
Radiation Detectors
Superfluid ^{4}He as a solar neutrino detector, 12:46110 (R;US)
Radiation Flux
Matter oscillations: neutrino transformation and regeneration in the earth, 12:46549 (RA;US)

SOLAR OCCULTATION
See ECLIPSE

SOLAR RADIO BURSTS
Detection
Kilometric Type-II radiation from interplanetary shocks: interpretation of Voyager results, 12:46351 (R;US)

SOLAR RECEIVERS
See also CENTRAL RECEIVERS
Heat Storage
DTA/DSC studies of phase equilibria in binary mixtures of barium carbonate with alkali carbonates, 12:45262 (R;US)

SOLAR SYSTEM EVOLUTION
High explosive simulations of supernovae and the supernova shell fragmentation model of solar system formation, 12:46367 (R;US)

SOLAR THERMAL POWER PLANTS
See also DISTRIBUTED COLLECTOR POWER PLANTS
TOWER FOCUS POWER PLANTS
Meetings
Proceedings of the solar thermal technology conference, 12:45258 (R;US)
Research Programs
Solar thermal technology: Annual report, Fiscal Year 1986, 12:45257 (R;US)

SOLAR THERMAL RECEIVERS
See SOLAR RECEIVERS

SOLAR WATER HEATERS
Cost Benefit Analysis
Cost reduction of the Sun Challenger (trade mark) batch solar water heater. Final report, 31 March 1986-30 April 1987, 12:45266 (R;US)
In-Service Inspection
In situ check of solar water heaters, 12:45265 (R;DK)
Materials
Cost reduction of the Sun Challenger (trade mark) batch solar water heater. Final report, 31 March 1986-30 April 1987, 12:45266 (R;US)

SOLAR WIND
Kilometric Type-II radiation from interplanetary shocks: interpretation of Voyager results, 12:46351 (R;US)
Density
Changes in the microturbulence spectrum of the solar wind during high-speed streams, 12:46354 (R;US)

Electron Density
Changes in the microturbulence spectrum of the solar wind during high-speed streams, 12:46354 (R;US)
Heat Flux
Bidirectional solar wind electron heat flux events, 12:46385 (J;US)
Heavy Ions
Observations of heavy energetic ions far upstream from Comet Halley, 12:46355 (RA;US)
Mathematical Models
Physics of the inner heliosphere: Mechanisms, models and observational signatures. Semiannual progress reports, 1 May 1986-30 April 1987, 12:46370 (R;US)
Shock Waves
Simulation of January 1-7, 1978 events, 12:46379 (R;TW)
Simulation
Simulation of January 1-7, 1978 events, 12:46379 (R;TW)
Thermodynamics
Physics of the inner heliosphere: Mechanisms, models and observational signatures. Semiannual progress reports, 1 May 1986-30 April 1987, 12:46370 (R;US)
Velocity
Application of the blast waves in the solar wind concept to major interplanetary shocks during the Solar Maximum Year (SMY), 12:46349 (R;US)

SOLENOIDS
Helical Configuration
Response of helical structures to high speed pulses or when can a helix be called an inductor?, 12:46036 (R;US)
Induction
Response of helical structures to high speed pulses or when can a helix be called an inductor?, 12:46036 (R;US)
Timing Properties
Response of helical structures to high speed pulses or when can a helix be called an inductor?, 12:46036 (R;US)

SOLID LUBRICANTS
Testing
Experimental evaluation of chromium-carbide-based solid lubricant coatings for use to 760°C, 12:45697 (R;US)

SOLID SCINTILLATION DETECTORS
See also NAI DETECTORS
Performance characteristics of a high-level solid-state personnel dosimetry system in pulsed radiation environments, 12:46101 (R;US)

SOLID STATE LASERS
Cladding
Edge-cladding glasses for solid-state laser garnet crystals, 12:45827 (J;US)
Design
High-average-power lasers, 12:46927 (RA;US)
Flash Tubes
Laser research and development, 12:46925 (RA;US)
Hybrid Systems
Coherent summation of Nd:YAG lasers. Final report, 1 October 1986-31 March 1987, 12:45999 (R;US)
Laser Materials
Edge-cladding glasses for solid-state laser garnet crystals, 12:45827 (J;US)
High-average-power lasers, 12:46927 (RA;US)
Laser research and development, 12:46925 (RA;US)
Materials Testing
Laser research and development, 12:46925 (RA;US)
Research Programs
High-average-power lasers, 12:46927 (RA;US)
Laser research and development, 12:46925 (RA;US)

SOLID WASTES
See also TAILINGS
WOOD WASTES
Chemical Properties
Evaluation of the uses and morphology of atmospheric fluidized bed combustion wastes from CFB Summerside AFBC boilers, 12:44889 (R;CA)
Combustion
Evaluation test on a hospital-refuse incinerator at Cedars Sinai Medical Center, Los Angeles, California. Final report, 12:46168 (R;US)
Gasification
Biological gasification of renewable resources. Annual report, March 1984-February 1985, 12:45205 (R;US)
Materials Recovery
Recovery of non-ferrous metal from pulverised refuse - a feasibility study, 12:46042 (R;GB)
Utilization of residues of desulphurization and denitrification technologies, 12:44901 (R;XU)
Oxidation
Thermal oxidation of spray dryer FGD waste product, 12:44900 (R;XU)
Physical Properties
Evaluation of the uses and morphology of atmospheric fluidized bed combustion wastes from CFB Summerside AFBC boilers, 12:44889 (R;CA)
Toxicity
Evaluation of the toxicity characteristic leaching procedure (TCLP) on utility wastes: Final report, 12:44886 (R;US)
Waste Disposal
By-product utilization and waste disposal introductory report, 12:44906 (R;XU)
Use and disposal of end-products (Stabilisa) of spray dryer absorption process, 12:44920 (R;XU)
Waste Processing
Processing and utilization of FGD-residuals from coal-fired power plants, 12:44898 (R;XU)
Thermal oxidation of spray dryer FGD waste product, 12:44900 (R;XU)
Utilization of residues of desulphurization and denitrification technologies, 12:44901 (R;XU)
Waste Product Utilization
By-product utilization and waste disposal introductory report, 12:44906 (R;XU)
Evaluation of the uses and morphology of atmospheric fluidized bed combustion wastes from CFB Summerside AFBC boilers, 12:44889 (R;CA)
Marketing and dump storing of solid end-products of a flue-gas desulphurization plant, 12:44893 (R;XU)
Processing and utilization of FGD-residuals from coal-fired power plants, 12:44898 (R;XU)
Thermal oxidation of spray dryer FGD waste product, 12:44900 (R;XU)
Use and disposal of end-products (Stabilisa) of spray dryer absorption process, 12:44920 (R;XU)
Utilization of by-products from the gypsum process and spray absorption process, 12:44892 (R;XU)
Utilization of residues of desulphurization and denitrification technologies, 12:44901 (R;XU)

SOLIDS
Shock Waves
Modeling shockwave deformation via molecular dynamics, 12:46978 (R;US)
Thermoelectric Properties
Thermoelectric power fluctuations, 12:46787 (J;US)

SOLVENT EXTRACTION
See also SUPERCRITICAL GAS EXTRACTION
Research Programs
Supercritical fluid extraction of oil shale, 12:45023 (RA;US)

SOLVENT-REFINING COAL PLANTS
See COAL PREPARATION PLANTS

SOLVENTS
See also NONAQUEOUS SOLVENTS
Absorption
Mixture resolution of chemical agents detected by piezoelectric multisensor array, 12:45889 (BA;US)
Fires
Health-hazard evaluation report HETA 83-194-1779, Dade County Fire Department, Miami, Florida, 12:45542 (R;US)
Regeneration
Regeneration of refrigerated methanol in conditioning gases from coal. Final report, June 1984-October 1985, 12:44861 (R;US)

SOUTH TEXAS PROJECT-1 REACTOR
Bay City, Texas, USA

Specifications
Technical specifications, South Texas Project, Unit No. 1 (Docket No. 50-498): Appendix "A" to License No. NPF-71, 12:45344 (R;US)
SOVIET UNION
See USSR
SPACE

Spent Fuel Storage
Virginia Power/DOE/EPRI PWR spent fuel storage cask performance testing and analysis (Viewgraphs only), 12:45094 (RA;US)
Standardized Terminology
International spent fuel storage update, 12:45105 (RA;US)
Test Facilities
Acoustic emission and wave propagation monitoring at the spent fuel test: Climax, Nevada (NNWSI), 12:45113 (J;GB)

SPENT FUELS
Casks
Rigid performance requirements assure public safety by regulations, 12:45109 (R;US)
Transportation planning for Civilian Radioactive Waste, 12:45088 (R;US)
Data Base Management
Office of Civilian Radioactive Waste Management (OCRWM), Waste Systems Data Development (WSDD) Program: Waste characterization subtask, 12:45133 (RA;US)
Fires
Response of spent LWR fuel to extreme environments, 12:45111 (BA;XA)
Isotope Ratio
Error evaluation for the numerical integration of special stiff differential equation systems, 12:45142 (RA;DD;In German)
Oxidation
Spent fuel oxidation test results, 12:45104 (RA;US)
Radioactive Waste Management
Office of Civilian Radioactive Waste Management (OCRWM), Waste Systems Data Development (WSDD) Program: Waste characterization subtask, 12:45133 (RA;US)
Spent fuel storage technical exchange, 12:45092 (R;US)
Radioactive Waste Storage
Spent fuel storage technical exchange, 12:45092 (R;US)
Radioactivity
Office of Civilian Radioactive Waste Management (OCRWM), Waste Systems Data Development (WSDD) Program: Waste characterization subtask, 12:45133 (RA;US)
Transport
Response of spent LWR fuel to extreme environments, 12:45111 (BA;XA)
Rigid performance requirements assure public safety by regulations, 12:45109 (R;US)
Transportation planning for Civilian Radioactive Waste, 12:45088 (R;US)

SPENT SHALES
Chemical Properties
Influence of retorted oil shale recarbonation on mineralogy and element mobility, 12:45065 (RA;US)
Postburn evaluation of retort 1 at least tract C-a, 12:45027 (RA;US)
Compacting
Results of experiments on compaction of oil shale during retorting, 12:45018 (RA;US)
Ground Subsidence
Results of experiments on compaction of oil shale during retorting, 12:45018 (RA;US)
Leachates
Characteristics of leachates from retorted oil shales, 12:45062 (RA;US)
Leaching of retorted oil shale with complexometric agents, 12:45063 (RA;US)
Oxidation-reduction and leachate chemistry of restored oil shale, 12:45064 (RA;US)
Leaching
Characteristics of leachates from retorted oil shales, 12:45062 (RA;US)
Mineralogy
Influence of retorted oil shale recarbonation on mineralogy and element mobility, 12:45065 (RA;US)
Physical Properties
Postburn evaluation of retort 1 at least tract C-a, 12:45027 (RA;US)
Quantitative Chemical Analysis
Selected elemental distributions as determined by reference retorting of oil shale and possible correlation with Fischer assay oil yield, 12:45056 (R;US)
Solubility
Influence of retorted oil shale recarbonation on mineralogy and element mobility, 12:45065 (RA;US)
Sorptive Properties
Oxidation-reduction and leachate chemistry of restored oil shale, 12:45064 (RA;US)
Waste Disposal
Leaching of retorted oil shale with complexometric agents, 12:45063 (RA;US)
Oxidation-reduction and leachate chemistry of restored oil shale, 12:45064 (RA;US)
Weathering
Western Research Institute: Quarterly technical progress report, April-June 1986, 12:45038 (R;US)

SPERM
See SPERMATOZOA
SPERMATIDS
See SPERMATOZOA
SPERMATOZOA
Quantitative Chemical Analysis
Distribution of protamines 1 and 2 in mammals and implications with respect to protamine gene expression, 12:45888 (BA;US)
Structural Chemical Analysis
Distribution of protamines 1 and 2 in mammals and implications with respect to protamine gene expression, 12:45888 (BA;US)

SPHEROMAK DEVICES
Equilibrium
Evolution of a decaying spheromak, 12:46879 (J;US)
Plasma Instability
Evolution of a decaying spheromak, 12:46879 (J;US)

SPICES
Chemical Radiation Effects
Treatment of spices with ionizing radiation - chemical, sensory, microbiological and toxicological aspects. Pt. 3, 12:46268 (R;DE;In German)
Radiopreservation
Treatment of spices with ionizing radiation - chemical, sensory, microbiological and toxicological aspects. Pt. 3, 12:46268 (R;DE;In German)

SPIN-OFF
See TECHNOLOGY TRANSFER
SPLINE FUNCTIONS
Interpolation
A shape preserving interpolant which has tension controls, 12:46995 (R;US)

SPRAY DRYING
Waste Management
Calcium spray dryer waste management: Design guidelines: Final report, 12:44885 (R;US)

SPRAY PONDS
See SPRAYS
SPRAYED COATINGS
Tensile Properties
T55-L-712 turbine engine compressor housing refurbishment project. Final report, 12:45729 (R;US)

SPRAYS
Combustion
Integrated approach to spray-combustion model development. Report for October 1985-October 1986, 12:45959 (R;US)
Transient spray-combustion computations. Report for October 1985-October 1986, 12:45960 (R;US)
Droplets
Transient spray-combustion computations. Report for October 1985-October 1986, 12:45960 (R;US)
SPUTTERING
Focused-ion-beam technology and applications, 12:46723 (R;US)
SRM
See CALIBRATION STANDARDS
STAINLESS STEEL-304L
Materials Working
Computer modeling of metal forming, 12:46974 (R;US)
Mechanical Vibrations
Damping characteristics of a composite-reinforced stainless-steel tube, 12:46023 (R;US)
STAINLESS STEEL-316
Corrosion
Corrosion studies under hydrogenated water chemistry, 12:45335 (RA;JP)
STAINLESS STEELS
See also STAINLESS STEEL-304L STAINLESS STEEL-316
Aging
Microstructural evolution and response to double-loop reactivation testing of heat-treated pH 13-8 Mo martensitic stainless steel, 12:45737 (R;US)
Creep
Third stage of irradiation creep involving its cessation at high neutron exposures, 12:45755 (J;NL)
Field Emission
Studies on temporal field emission from stainless steel surfaces: Final report, April 30, 1987 to June 30, 1987, 12:46091 (R;US)
Intergranular Corrosion
Microstructural evolution and response to double-loop reactivation testing of heat-treated pH 13-8 Mo martensitic stainless steel, 12:45737 (R;US)
Microstructure
Microstructural evolution and response to double-loop reactivation testing of heat-treated pH 13-8 Mo martensitic stainless steel, 12:45737 (R;US)
Nitridation
Nitriding of steels in fast reactor cover gas environments, 12:45356 (RA;XE)
Pitting Corrosion
Chloride induced corrosion of stainless steels and aluminium in condensing boilers, 12:45725 (R;DK;In Danish)
Precipitation Hardening
Microstructural evolution and response to double-loop reactivation testing of heat-treated pH 13-8 Mo martensitic stainless steel, 12:45737 (R;US)
Radiation Effects
Third stage of irradiation creep involving its cessation at high neutron exposures, 12:45755 (J;NL)
STANDARD MAN
See REFERENCE MAN
STANDARD MODEL
Phenomenological aspects of unified theories, 12:46622 (BA;US)
Twisted strings and orbifolds, 12:46595 (BA;US)
Charm Particles
An introduction to charm and heavy quark physics, 12:46612 (R;US)
Constraints
Constraining the standard model with a supergroup, 12:46639 (BA;US)
Electron-Positron Interactions
E_6 theories and Higgs boson pair production in e^+e^- annihilation, 12:46569 (J;NL)
Group Theory
Constraining the standard model with a supergroup, 12:46639 (BA;US)
Limiting Values
KMC unitarity and new physics, 12:46573 (BA;US)
Neutrino-Nucleon Interactions
sin/sup 2/ θ/sub w/ and radiative corrections, 12:46578 (BA;US)
Quarks
An introduction to charm and heavy quark physics, 12:46612 (R;US)
Radiative Corrections
sin/sup 2/ θ/sub w/ and radiative corrections, 12:46578 (BA;US)
Supersymmetry
Constraining the standard model with a supergroup, 12:46639 (BA;US)
Symmetry Breaking
Universal W,Z scattering theorems and no-lose corollary for the SSC, 12:46621 (BA;US)
Tau Particles
An introduction to charm and heavy quark physics, 12:46612 (R;US)
Testing
KMC unitarity and new physics, 12:46573 (BA;US)
New results on tau polarization measurement and electroweak interference in e/sup +/e/sup -/ annihilation into hadrons, 12:46540 (BA;US)
sin/sup 2/ θ/sub w/ and radiative corrections, 12:46578 (BA;US)
Weinberg Angle
sin/sup 2/ θ/sub w/ and radiative corrections, 12:46578 (BA;US)
Universal W,Z scattering theorems and no-lose corollary for the SSC, 12:46621 (BA;US)

STANFORD LINEAR COLLIDER
Beam Optics
A conceptual design of Final Focus Systems for linear colliders, 12:46089 (R;US)
Application of online modeling to the operation of SLC, 12:46069 (R;US)
Computer-Aided Design
Application of online modeling to the operation of SLC, 12:46069 (R;US)
Klystrons
Conventional power sources for colliders, 12:46090 (R;US)
Optical Systems
A conceptual design of Final Focus Systems for linear colliders, 12:46089 (R;US)
Power Supplies
Conventional power sources for colliders, 12:46090 (R;US)
Quadrupoles
High gradient superconducting quadrupoles, 12:46071 (R;US)
Superconducting Magnets
High gradient superconducting quadrupoles, 12:46071 (R;US)
STATE GOVERNMENT
Air Pollution Monitoring
Pilot project to demonstrate the feasibility of a state continuous-emission-monitoring system (CEMS) regulatory program. Summary report, 12:46197 (R;US)
STATISTICAL MECHANICS
Mathematical Models
Critical behavior of a new class of statistical-mechanical models with continuous variables and discretely valued interactions, 12:46834 (J;US)
STATISTICS
Limited to the indexing of information on the mathematical discipline of statistics or its application in other scientific disciplines; for indexing numerical values of a statistical nature use STATISTICAL DATA.
Power transformation of the sample kurtosis, 12:46962 (R;US)
STEAM DRIVE PROCESS
See FLUID INJECTION PROCESSES

STEAM GENERATORS
Reactor Monitoring Systems
Algorithms for in-service technical diagnostics of WWER type steam generators and pressurizers, 12:45412 (RA;CS;In Czech)
Tubes
Intergranular attack of alloy 600 tubing: Simulation tests: Interim report, 12:45341 (R;US)
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)
STEAM INJECTION
Additives
Contracts for field projects and supporting research on enhanced oil recovery: Progress review No. 47, Quarter ending June 1986, 12:44977 (R;US)
Bench-Scale Experiments
Contracts for field projects and supporting research on enhanced oil recovery: Progress review No. 47, Quarter ending June 1986, 12:44977 (R;US)
Chemical Reaction Kinetics
Hot gas pyrolysis of tar sand, 12:45032 (RA;US)
Computerized Simulation
Hot gas pyrolysis of tar sand, 12:45032 (RA;US)
STEEL INDUSTRY

Inflation and other cosmological aspects of superstring inspired models, 12:46390 (BA;US)
Introduction to two dimensional conformal and superconformal field theory, 12:46636 (BA;US)
Is the superstring semiclassical, 12:46631 (BA;US)
Phenomenological aspects of unified theories, 12:46622 (BA;US)
Superstrings, 12:46628 (BA;US)
Torsion in superstrings, 12:46634 (BA;US)
Symmetry Breaking
Twisted strings and orbifolds, 12:46595 (BA;US)
Temperature Effects
String field theory at finite temperature, 12:46618 (J;US)
Vertex Functions
Operator formulation of Wittens string field theory, 12:46627 (BA;US)
STRONG INTERACTIONS
Coupling Constants
Clustertopology of multihadronic events in the e/sup +/e/sup -/-annihilation, 12:46510 (R;DE;In German)
STRONTIUM
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Transport
Analysis and predictions of water and solute transport in a large lysimeter, 12:46227 (RA;US)
Finite element simulation of moisture movement and solute transport in a large caisson, 12:46230 (RA;US)
Simulation of ion movement in soil using a continuous-time Markov process, 12:46228 (RA;US)
Time and frequency domain analysis of tracer migration in crushed tuff, 12:46229 (RA;US)
STRONTIUM 90
Radioecological Concentration
Site surveillance and maintenance program for Palos Park: Report for 1986, 12:45153 (R;US)
STRONTIUM ALLOYS
Formation Heat
Formation enthalpy of alkaline earth metals with aluminium intermetallic compounds, 12:45721 (RA;SU;In Russian)
STRONTIUM COMPOUNDS
See also STRONTIUM OXIDES
STRONTIUM SULFIDES

Isotopic Exchange
Observation of an oxygen isotope shift in the superconducting transition temperature of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45787 (J;US)
Transition Temperature
Observation of an oxygen isotope shift in the superconducting transition temperature of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45787 (J;US)

STRONTIUM OXIDES
Absorption Spectra
Soft x-ray absorption studies on high-T/sub c/ superconducting oxides, 12:45782 (J;US)
Atom Transport
Oxygen-vacancy behavior in La/sub 2-//sub x/Sr/sub x/CuO/sub 4-//sub y/ by positron annihilation and oxygen diffusion, 12:45778 (J;US)
Contings
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Dielectric Properties
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Electron Collisions
Inverse photoemission studies of the empty electronic states and surface stability of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45780 (J;US)
Electronic Structure
Inverse photoemission studies of the empty electronic states and surface stability of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45780 (J;US)
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Passivation
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Photoelectron Spectroscopy
Oxygen withdrawal, copper valency, and interface reaction for Fe/La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45781 (J;US)
Photoemission
Spectroscopic evidence for passivation of the La/sub 1.85/Sr/sub 0.15/CuO_4 surface with gold, 12:45740 (J;US)
Photon Emission
Inverse photoemission studies of the empty electronic states and surface stability of La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45780 (J;US)
Piezoelectricity
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Pyroelectric Effect
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Sorptive Properties
Oxygen withdrawal, copper valency, and interface reaction for Fe/La/sub 1.85/Sr/sub 0.15/CuO_4, 12:45781 (J;US)
Structural Chemical Analysis
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Superconductivity
Electrical properties of high T/sub c/ superconductors under high pressures (LaBaCuO, LaSrCuO, YBaCuO), 12:45813 (R;US)
Magnetic studies of high T/sub c/ superconducting (La/sub 0.9/Sr/sub 0.1/)$_2$CuO/sub 4-y/, 12:45789 (J;US)
Soft x-ray absorption studies on high-T/sub c/ superconducting oxides, 12:45782 (J;US)
Vacancies
Oxygen-vacancy behavior in La/sub 2-//sub x/Sr/sub x/CuO/sub 4-//sub y/ by positron annihilation and oxygen diffusion, 12:45778 (J;US)

STRONTIUM SULFIDES
Bragg Reflection
Remanence on microscopic and macroscopic scales in the reentrant spin glass Eu/sub x/Sr/sub 1-//sub x/S, 12:45840 (J;US)
Hysteresis
Remanence on microscopic and macroscopic scales in the reentrant spin glass Eu/sub x/Sr/sub 1-//sub x/S, 12:45840 (J;US)
Neutron Diffraction
Remanence on microscopic and macroscopic scales in the reentrant spin glass Eu/sub x/Sr/sub 1-//sub x/S, 12:45840 (J;US)

EUROPIUM SULFIDES
HYDROGEN SULFIDES
INDIUM SULFIDES
SODIUM SULFIDES
STRONTIUM SULFIDES
Chemical State
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)
Corrosive Effects
Effects of injection on condensation on a film-cooled surface, 12:46048 (B;US)
Gravimetric Analysis
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)

Liquid Column Chromatography
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)
Polarography
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)
Voltametry
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)

SULFITES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Liquid Column Chromatography
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)

SULFUR
Combustion Kinetics
Kinetics of nitrogen and sulfur reactions in combustion systems: Quarterly report No. 8, 12:45961 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Mass Spectroscopy
Low-voltage, high-resolution mass spectrometric methods for fuel analysis: application to coal distillates, 12:44880 (J;US)
Thermochemical Diagrams
AR and TD Fossil Energy Materials Program: Semiannual progress report for the period ending March 31, 1987, 12:44859 (R;US)

SULFUR 32 REACTIONS
Deep Inelastic Heavy Ion Reactions
Distribution of reaction strength in /sup 32/S+/sup 182/W collisions, 12:46674 (J;US)
Elastic Scattering
Distribution of reaction strength in /sup 32/S+/sup 182/W collisions, 12:46674 (J;US)
Fission
Distribution of reaction strength in /sup 32/S+/sup 182/W collisions, 12:46674 (J;US)

SULFUR 34 TARGET
Pion Plus Reactions
Double charge exchange to the double isobaric analog state at T/sub π/—292 MeV, 12:46661 (J;US)

SULFUR COMPOUNDS

SULFUR DIOXIDE
Absorption Spectroscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Air Pollution Abatement
Coal markets and utilities' compliance decisions: Final report, 12:44963 (R;US)
Proceedings of the annual heat engines and gas stream cleanup systems contractors review meeting, 12:45310 (R;US)
State of the art of the dry limestone-additive method, 12:44922 (R;XU)
Air Pollution Control
Cost of flue gas desulphurization and denitrification in the Federal Republic of Germany, 12:44897 (R;XU)
Costs and effectiveness of reducing sulphur and nitrogen emissions from power plants in Baden-Wuerttemberg, 12:44896 (R;XU)
Feasibility test of a low emissions topping combustor for fluidized bed applications, 12:46046 (B;US)
Low-emission combustion processes, 12:44908 (R;XU)
Reduction of SO_2 and NO/sub x/ emissions from stationary sources in North Rhine-Westphalia - strategy and results, 12:44894 (R;XU)
Report of the seminar on the control of sulfur and nitrogen oxides from stationary sources, 12:46164 (R;XU)
Strategies for reducing sulphur and nitrogen emissions in relation to energy production structure and energy use, 12:44907 (R;XU)
Technologies for controlling pollutants from coal combustion, 12:44918 (R;XU)
Biological Effects
Differing response of asthmatics to sulfur dioxide exposure with continuous and intermittent exercise, 12:46311 (R;US)
Electron Spectroscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Emission
Rational use of energy and change in the pattern of energy consumption in the Federal Republic of Germany - effects on the emission of SO_2 and NO/sub x/, 12:46184 (R;XU)
Environmental Policy
Study of alternatives for a 30% reduction of SO_2 emissions in Austria and effects on the economy and consumers, 12:46185 (R;XU)
Materials Recovery
SO_2 recovery by means of adipic acid buffers, 12:44921 (R;XU)
Optical Microscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Pollution Regulations
Study of alternatives for a 30% reduction of SO_2 emissions in Austria and effects on the economy and consumers, 12:46185 (R;XU)
Removal
Evaluation of sorbents and additives for dry SO_2 (sulfur dioxide) removal (journal version), 12:44890 (R;US)
Evaluation of the toxicity characteristic leaching procedure (TCLP) on utility wastes: Final report, 12:44886 (R;US)
Experimental study of gas use to improve the limestone-injection process for SO_2 control on utility boilers. Topical report, November 1985-September 1986, 12:45325 (R;US)
Studies on the reaction of calcined limestone with sulfur dioxide: Technical progress report for the period April-June 1987, 12:44884 (R;US)
Scanning Electron Microscopy
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)
Toxicity
Effects of realistic combinations of SO/sub 2/, NO/sub 2/ and ozone on Sitka spruce, 12:46308 (R;DE)
X-Ray Diffraction
Use of analytical chemistry in characterizing a flue gas clean-up process, 12:45898 (BA;US)

SULFUR FLUORIDES
Absorption Spectroscopy
Picosecond dynamical temporal evolution of molecular IR absorption spectra, 12:45939 (BA;US)
Infrared Spectra
Picosecond dynamical temporal evolution of molecular IR absorption spectra, 12:45939 (BA;US)

SULFUR HYDRIDES
See HYDROGEN SULFIDES

SULFUR IONS
Ion-Atom Collisions
Ion-induced X-ray studies with a high luminosity von Hamos crystal spectrometer, 12:46122 (J;NL)
Ion-X-ray coincidence measurements in heavy ion collisions, 12:46459 (J;NL)
Ion-X-ray coincidence measurements in heavy ion collisions, 12:46472 (J;NL)
Liquid Column Chromatography
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)

Spectrophotometry
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)

SULFUR OXIDES
See also SULFUR DIOXIDE
SULFUR TRIOXIDE
Air Pollution Abatement
Reduction of sulphur and nitrogen oxide emissions from fluidized bed boilers by control of combustion conditions, 12:44911 (R;XU)

SULFUR SULFIDES
See SULFUR

SULFUR TRIOXIDE
Combustion Kinetics
Technical and economic feasibility of sulfur trioxide retorting of oil shale, 12:45024 (RA;US)
Uses
Technical and economic feasibility of sulfur trioxide retorting of oil shale, 12:45024 (RA;US)

SUN
Magnetic Monopoles
Monopoles, cosmology, and astrophysics - Update 1985, 12:46391 (J;US)
Shape
Variable oblateness of the sun: measurements of 1984, 12:46352 (R;US)

SUN SHADES
Computerized Simulation
Unified sun and sky illumination for shadows under trees, 12:46999 (R;US)
Image Processing
Unified sun and sky illumination for shadows under trees, 12:46999 (R;US)

SUPER HIGH FREQUENCY RADIATION
See RADIOWAVE RADIATION

SUPERALLOYS
See HEAT RESISTING ALLOYS

SUPERCOMPUTERS
Benchmarks
Evaluating computers and their performance: Perspectives, pitfalls, and paths, 12:46955 (R;US)
Computer Architecture
An embedded multiprocessor computer for proof-of-principle testing of exploratory systems concepts, 12:46984 (R;US)
Implementation of preconditioned s-step Conjugate Gradient methods on a multiprocessor system with memory hierarchy, 12:46967 (R;US)
Evaluation
Evaluating computers and their performance: Perspectives, pitfalls, and paths, 12:46955 (R;US)
Memory Devices
Implementation of preconditioned s-step Conjugate Gradient methods on a multiprocessor system with memory hierarchy, 12:46967 (R;US)
Programming Languages
An embedded multiprocessor computer for proof-of-principle testing of exploratory systems concepts, 12:46984 (R;US)

SUPERCONDUCTING CAVITY RESONATORS
Design
Superconducting radio frequency technology: Expanding the horizons of physics and technology, 12:46081 (R;US)
Technology Assessment
Superconducting radio frequency technology: Expanding the horizons of physics and technology, 12:46081 (R;US)

SUPERCONDUCTING DEVICES
Restricted to general or review articles and bibliographies.
See also SUPERCONDUCTING CAVITY RESONATORS
SUPERCONDUCTING MAGNETS
Coolants
Liquid-to-vapor homogeneous nucleation in liquid nitrogen, 12:45839 (J;US)

SUPERCONDUCTING FILMS
Electric Conductivity
Freestanding films of YBa_2Cu_3O/sub 6.9/, 12:46807 (R;US)
Magnetic Properties
Freestanding films of YBa_2Cu_3O/sub 6.9/, 12:46807 (R;US)

SUPERCONDUCTING MAGNETS
Magnetoelastic buckling in superconducting toroidal magnet systems, 12:45975 (R;DE;In German)
Design
Full length prototype SSC dipole test results, 12:46082 (R;US)
High gradient superconducting quadrupoles, 12:46071 (R;US)
Performance Testing
Full length prototype SSC dipole test results, 12:46082 (R;US)
High gradient superconducting quadrupoles, 12:46071 (R;US)

SUPERCONDUCTING SUPER COLLIDER
Superconducting Magnets
Full length prototype SSC dipole test results, 12:46082 (R;US)

SUPERCONDUCTIVITY
Superconducting accelerator technology, 12:46056 (R;US)
BCS Theory
Supersymmetry and superconductivity, 12:46597 (BA;US)
Mathematical Models
Theory of the one- and two-dimensional electron gas, 12:46804 (R;US)

SUPERCONDUCTORS
Abrikosov Theory
Abrikosov vortex motion and elementary pinning force in a SNS [Superconductor-Normal metal-Superconductor] Josephson junction, 12:46805 (R;US)
Electric Conductivity
On the rf surface resistance of the perovskite superconductors at 3 GHz, 12:46806 (R;US)
Ion Microprobe Analysis
Multidimensional elemental analysis with the Sandia nuclear microprobe, 12:46777 (R;US)
Josephson Junctions
Abrikosov vortex motion and elementary pinning force in a SNS [Superconductor-Normal metal-Superconductor] Josephson junction, 12:46805 (R;US)
Magnetic Flux
Abrikosov vortex motion and elementary pinning force in a SNS [Superconductor-Normal metal-Superconductor] Josephson junction, 12:46805 (R;US)
Magnetic Susceptibility
On the rf surface resistance of the perovskite superconductors at 3 GHz, 12:46806 (R;US)

SUPERCRITICAL FLOW
See TURBULENT FLOW

SUPERCRITICAL FLUID CHROMATOGRAPHY
Design
Supercritical fluid chromatography-mass spectrometry: principles and promise, 12:45884 (BA;US)
Efficiency
Reverse micelle supercritical fluid chromatography, 12:45872 (J;US)
Resolution
Supercritical fluid chromatography-mass spectrometry: principles and promise, 12:45884 (BA;US)
Sensitivity
Supercritical fluid chromatography-mass spectrometry: principles and promise, 12:45884 (BA;US)

SUPERCRITICAL GAS EXTRACTION
Reaction Intermediates
Intermediates formed during supercritical desulfurization of coal: Sixteenth quarterly technical progress report, April 1, 1987 to June 30, 1987, 12:44847 (R;US)

SUPERCRITICAL STATE
Critical Pressure
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)
Critical Temperature
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)
Density
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)

Mass Transfer
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)
Viscosity
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)
SUPERFUND
Remedial Action
Superfund Record of Decision (EPA Region 1): Tinkham Garage, Londonderry, New Hampshire, September 1986. Final report, 12:46237 (R;US)
Superfund Record of Decision (EPA Region 4): Pioneer Sand Company, Warrington, Florida, September 1986. Final report, 12:46209 (R;US)
Superfund Record of Decision (EPA Region 5): Arrowhead Refinery, Duluth, Minnesota, September 1986. Final report, 12:46210 (R;US)
Superfund Record of Decision (EPA Region 6): Sikes Disposal Pits, Crosby, Texas, September 1986. Final report, 12:46211 (R;US)
Superfund enforcement decision document (EPA Region 5): Burlington Northern (BN), Brainerd, Minnesota, June 1986. Final report, 12:46238 (R;US)
Superfund Record of Decision (EPA Region 8): Denver Radium/ROBCO, Colorado (second remedial action), September 1986. Final report, 12:46205 (R;US)
SUPERGRAVITY
Harmonic superspace formalism and the consistent Chiral anomaly, 12:46625 (BA;US)
Action Integral
Geometrization of Planck length in composite gravity and supergravity, 12:46820 (R;XA)
Limiting Values
Top quark and light Higgs scalar mass bounds in no-scale supergravity, 12:46626 (BA;US)
Mass Formulae
Top quark and light Higgs scalar mass bounds in no-scale supergravity, 12:46626 (BA;US)
String Models
Superstrings, 12:46628 (BA;US)
SUPERLATTICES
Crystal Growth
Critical behavior of hydrogen in Nb/Ta superlattices, 12:45838 (J;US)
SUPERNOVA REMNANTS
See also CRAB NEBULA
Infrared Spectra
Far infrared observations of crab-like supernova remnants. Final report, 1 June 1985-31 May 1986, 12:46372 (R;US)
SUPERNOVAE
Mass Distribution
High explosive simulations of supernovae and the supernova shell fragmentation model of solar system formation, 12:46367 (R;US)
Nonluminous Matter
High explosive simulations of supernovae and the supernova shell fragmentation model of solar system formation, 12:46367 (R;US)
Star Models
Type II supernovae from prompt explosions, 12:46384 (J;US)
SUPERSYMMETRY
Baker—Campbell—Hausdorff relations for the super-Poincare group, 12:46833 (J;US)
Harmonic superspace formalism and the consistent Chiral anomaly, 12:46625 (BA;US)
Phenomenological aspects of unified theories, 12:46622 (BA;US)
Supersymmetry and superconductivity, 12:46597 (BA;US)
SUPERVOLTAGE RADIOTHERAPY
See RADIOTHERAPY
SUPPLY DISRUPTION
Economic Impact
World energy outlook: Economic and security implications, 12:45571 (RA;US)
Emergency Plans
International energy actions, 12:45581 (RA;US)
Staying prepared for emergencies, 12:45580 (RA;US)
International Cooperation
International energy actions, 12:45581 (RA;US)
SUPPORT PILLARS
Stresses
Three-dimensional stress changes in pillars during longwall mining at Ellalong Colliery, 12:44935 (R;AU)
Width
Calculation of the width of barrier pillar required to protect a development drivage against inundation, 12:44938 (R;CA)
SUPPORTS (CATALYST)
See CATALYST SUPPORTS
SURFACE COATING
See also CLADDING
VACUUM COATING
Materials Testing
Anti-abrasion protection with highly organized materials, 12:45821 (R;US)
SURFACE EXPLOSIONS
Environmental Effects
Lofting of dust by very large explosions, 12:46147 (R;US)
SURFACE MINING
Data Acquisition Systems
Vehicle monitoring system at Widco mine, 12:44940 (R;CA)
Earthmoving Equipment
Exploration by geophysical methods, extraction and transport of hard rock inclusions during overburden removal, 12:44937 (R;XU)
Explosive Fracturing
Potential for blast casting in Canadian surface mines, 12:44947 (R;CA)
Geophysical Surveys
Exploration by geophysical methods, extraction and transport of hard rock inclusions during overburden removal, 12:44937 (R;XU)
Historical Aspects
Electricity and technical progress: The bituminous coal mining industry, mechanization to automation, 12:44948 (R;US)
Mine Haulage
Exploration by geophysical methods, extraction and transport of hard rock inclusions during overburden removal, 12:44937 (R;XU)
Mechanization of ancillary work in the case of combined transport and transport by lorry, 12:44936 (R;XU)
Vehicle monitoring system at Widco mine, 12:44940 (R;CA)
Mining Equipment
Electricity and technical progress: The bituminous coal mining industry, mechanization to automation, 12:44948 (R;US)
SURFACE TREATMENTS
Ion Implantation
Industrial applications of ion implantation into metal surfaces, 12:45714 (R;US)
SURFACE WATERS
See also COASTAL WATERS
LAKES
STREAMS
WATER RESERVOIRS
Acidification
National surface-water survey: Eastern Lake Survey, Phase 1 (ELS-1), 1984 (sas data tape). Data file, 12:46219 (R;US)
National surface water survey: Eastern Lake Survey, Phase 1 (ELS-1), 1984 (SAS export data tape). Data file, 12:46220 (R;US)
National surface water survey: Eastern Lake Survey, Phase I (ELS-1), 1984 (EBCDIC tape). Data file, 12:46221 (R;US)
National surface water survey: Eastern Lake Survey, Phase 1 (ELS-1), 1984 (ASCII tape). Data file, 12:46222 (R;US)
Contamination
Long-term performance assessment of grouted phosphate/sulfate waste from N Reactor operations, 12:45132 (R;US)
Waste Water
Wastewater characterization survey, Plattsburgh AFB, New York. Final report, 12:46215 (R;US)

Water Quality
National surface water survey: Eastern Lake Survey, Phase 1 (ELS-1), 1984 (for microcomputers). Data file, 12:46223 (R;US)
SURFACES
Frequency Mixing
Second-harmonic and sum-frequency generation for surface studies, 12:46742 (R;US)
Ion Implantation
Focused-ion-beam technology and applications, 12:46723 (R;US)
Sputtering
Focused-ion-beam technology and applications, 12:46723 (R;US)
SUSCEPTIBILITY (MAGNETIC)
See MAGNETIC SUSCEPTIBILITY
SUSPENSIONS (FUEL)
See FUEL SLURRIES
SWEAT GLANDS
See SKIN
SWEDEN
Fossil-Fuel Power Plants
Flue gas desulphurization at Oeresundverket, Malmoe, Sweden, 12:44913 (R;XU)
Government Policies
The need for nuclear power, 12:45575 (RA;US)
SWIRL FLOW
See VORTEX FLOW
SWITCHES
Design
A simple self-breaking 2 MV gas switch, 12:46010 (R;US)
Design and development of an improved AURORA Blumlein Oil Switch Trigger System, 12:46084 (R;US)
Testing
Design and development of an improved AURORA Blumlein Oil Switch Trigger System, 12:46084 (R;US)
SWITZERLAND
Biomass Conversion Plants
Prospects and perspectives of biomass conversion in Switzerland, 12:45203 (RA;DE;In German)
SYNCHROPHASOTRONS
See SYNCHROTRONS
SYNCHROTRON RADIATION SOURCES
See also NSLS
Design
Atomic physics and synchrotron radiation: the production and accumulation of highly charged ions, 12:46095 (J;NL)
Design considerations for a combined synchrotron light source and heavy-ion storage ring atomic physics facility, 12:46100 (J;NL)
Performance
Atomic physics and synchrotron radiation: the production and accumulation of highly charged ions, 12:46095 (J;NL)
Windows
Replaceable Be and Al windows for x-ray beam lines, 12:46075 (R;US)
SYNCHROTRONS

FERMILAB ACCELERATOR
FERMILAB TEVATRON
NSLS
Wiggler Magnets
The Beam Line X NdFe-steel hybrid wiggler for SSRL, 12:46092 (R;US)
SYNTHESIS
See also PHOTOSYNTHESIS
Chemical Reaction Kinetics
Novel experimental studies for coal liquefaction: Quarterly progress report, April 1, 1987 to June 30, 1987, 12:44849 (R;US)
SYNTHESIS GAS
Physical Properties
Development of an equation of state for computation of supercompressibility factors, critical flow factors, and other properties for wet, sour natural gases, sythetic gases and admixtures. Annual report, October 1985-September 1986, 12:45014 (R;US)
SYNTHETIC FUELS
See also ALCOHOL FUELS
PYROLYTIC OILS
Experiment Planning
Alternative fuels utilization program project office operation plan for FY 1986-87, 12:45709 (R;US)
Physical Properties
Molecular theory and computer-simulation studies of natural and synthetic gas mixtures. Final report, January 1, 1983-December 31, 1986, 12:45013 (R;US)
Research Programs
Alternative fuels utilization program project office operation plan for FY 1986-87, 12:45709 (R;US)
Biomass Thermochemical Conversion Program: 1986 annual report, 12:45206 (R;US)
CEC sub-programme of R & D on new energy vectors, 12:44856 (R;XE)
Thermodynamic Properties
Molecular theory and computer-simulation studies of natural and synthetic gas mixtures. Final report, January 1, 1983-December 31, 1986, 12:45013 (R;US)
SYNTHETIC LUBRICANTS
Additives
Boundary lubrication. Experiments with boundary lubrication and plain bearings at +60...-60 deg C temperatures, 12:45007 (R;FI;In Finnish)
Testing
Boundary lubrication. Experiments with boundary lubrication and plain bearings at +60...-60 deg C temperatures, 12:45007 (R;FI;In Finnish)
SYNTHINE PROCESS

THERMONUCLEAR DEVICES
Impurities
Summary abstract: measurement of impurities in a neutral beam by laser induced fluorescence, 12:46897 (J;US)
Research Programs
Atomic data for highly charged ions. Applications to X-ray laser design and thermonuclear fusion, 12:46889 (J;NL)
THERMONUCLEAR REACTOR MATERIALS
Chemical Vapor Deposition
Carbon film and its applications, 12:46913 (R;JP;In Japanese)
THERMONUCLEAR REACTORS
For use in cases where certain aspects of either hypothetical or real thermonuclear reactors are discussed.
See also LASER FUSION REACTORS
MAGNETIC MIRROR TYPE REACTORS
TOKAMAK TYPE REACTORS
Breeding Blankets
Special features of first-wall heat transfer in liquid-metal fusion reactor blankets, 12:46937 (J;US)
Fuel Systems
Summary abstract: description and performance of uranium beds used to pump tritium-deuterium at the Tritium Systems Test Assembly, 12:46943 (J;US)
Materials Testing
Integral measurements and calculations of neutron and gamma-ray emission at 14 MeV and an overview of the new multi-user tandem at LLNL, 12:46932 (R;US)
Radiation Streaming
Analysis of the FNS streaming experiment with albedo Monte Carlo method, 12:46915 (RA;JP)
THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS
THERMOSPHERE
Functional Models
Atmospheric structure variations: modeling of atmospheric structure, 70 - 130 km. Final report, 1 January 1984-31 December 1986, 12:46400 (R;US)
THIN FILMS
Chemical Vapor Deposition
The preparation of thin films for photovoltaic conversion by novel MOCVD techniques: Final subcontract report, March 1987, 12:45820 (R;US)
Harmonic Generation
Optical second harmonic generation from Langmuir-type molecular monolayers, 12:46740 (R;US)
Thermal Conductivity
LLE [Laboratory for Laser Energetics] review: Quarterly report, October-December 1986, 12:46905 (R;US)
THIOETHERS
See SULFIDES
THIOSULFATES
Liquid Column Chromatography
Determination of inorganic sulfur species in alkaline solutions using high performance liquid chromatography with polarographic detection, 12:45857 (R;US)
Oxidation
Cooperative research in coal liquefaction infratechnology and generic technology development: Quarterly report, April 1, 1987-July 1, 1987, 12:44852 (R;US)
THORIUM
Concentration Ratio
Determination of impurities in plutonium by direct current plasma emission spectroscopy, 12:45892 (BA;US)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Determination of impurities in plutonium by direct current plasma emission spectroscopy, 12:45892 (BA;US)
Ion-Atom Collisions
Electron-positron pair creation in heavy ion collisions and Bhabha scattering in the MeV range, 12:46420 (R;DE)

Solvent Extraction
Determination of impurities in plutonium by direct current plasma emission spectroscopy, 12:45892 (BA;US)
THORIUM 230
Air Pollution Monitoring
Bioassay for uranium mill tailings, 12:46191 (BA;US)
Radioecological Concentration
Bioassay for uranium mill tailings, 12:46191 (BA;US)
THORIUM 232 TARGET
Neutron Reactions
Dipole strength functions in the actinide mass region, 12:46679 (R;US)
Photofission
Analysis of fissionable material using delayed gamma rays from photofission, 12:46681 (J;NL)
Analysis of fissionable material using delayed gamma rays from photofission, 12:46682 (J;NL)
Photonuclear Reactions
Dipole strength functions in the actinide mass region, 12:46679 (R;US)
THORIUM 233
E1-Transitions
Dipole strength functions in the actinide mass region, 12:46679 (R;US)
THORIUM C
See THALLIUM 208
THORIUM NITRATES
Diffusion
Transport characteristics of thorium nitrate in different practice-oriented solutions and diffusion coefficients of plutonium(IV)-nitrate in a nitric acid solution. A contribution to the optimization of the reprocessing of nuclear fuels, 12:45082 (R;DE;In German)
THORIUM OXIDES
Dissolution
Process for dissolving slightly soluble thorium and/or plutonium oxides, 12:45086 (TG;US)
THREE MILE ISLAND-2 REACTOR
Dauphin County, Pennsylvania, USA
Radiation Protection
Radiation protection management program at TMI-2 [Three Mile Island]: Noteworthy practices and accomplishments: Final report, 12:45479 (R;US)
Reactor Accidents
The cooldown aspects of the TMI-2 accident, 12:45511 (R;US)
THREE-BODY PROBLEM
Bound State
Quark cluster model in the three-nucleon system, 12:46688 (R;XA)
Cluster Model
Quark cluster model in the three-nucleon system, 12:46688 (R;XA)
Color Model
Quark cluster model in the three-nucleon system, 12:46688 (R;XA)
THROMBOCYTES
See BLOOD PLATELETS
THRUSTERS
Scale Models
MPD thruster scaling, 12:45995 (B;US)
THYROID
Variation in thyroid calibration efficiencies as a function of phantom design for I-125, 12:46710 (R;US)
TIBER-X TOKAMAK
Fuel Systems
Fueling systems, 12:46903 (R;US)
Power Generation
TF & PF magnet power conversion, 12:46904 (R;US)
Thermonuclear Fuels
Fueling systems, 12:46903 (R;US)
TID
See TRAVELLING IONOSPHERIC DISTURBANCE
TIGHT SANDS
See SANDSTONES
TIME-SERIES ANALYSIS
Forecasting
Predicting chaotic time series, 12:46837 (J;US)
TIN 118 TARGET
Nuclear Quadrupole Resonance
Isospin structure of giant resonances from pion inelastic scattering, 12:46664 (J;US)
Pion Reactions
Isospin structure of giant resonances from pion inelastic scattering, 12:46664 (J;US)
TIN 120 TARGET
Pion Plus Reactions
Mass dependence of pion single-charge exchange to the isobaric analog state at 20 MeV, 12:46658 (J;US)
TIN ALLOYS
See also BRONZE
ZIRCALOY
Electronic Structure
Electronic properties of the half-metallic ferromagnetic NiUSn, 12:45747 (J;US)
Impurities
Positron lifetime and Moessbauer spectroscopy study of the vacancy-impurity interaction in dilute Al-Sn alloys, 12:46757 (RA;DD)
Vacancies
Positron lifetime and Moessbauer spectroscopy study of the vacancy-impurity interaction in dilute Al-Sn alloys, 12:46757 (RA;DD)
TITANATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
See also PLZT
PZT
Chemical Preparation
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Crystal Growth
Crystal growth, phase transformation studies, and micro-cracking in single crystal lead titanate, 12:45797 (BA;US)
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Crystal-Phase Transformations
Crystal growth, phase transformation studies, and micro-cracking in single crystal lead titanate, 12:45797 (BA;US)
Dielectric Properties
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Dielectric aging effects in doped lead magnesium niobate: Lead titanate relaxor ferroelectric ceramics, 12:45804 (BA;US)
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Low-temperature fired lead magnesium niobate, 12:45795 (BA;US)
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Piezoelectricity
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Pyroelectric Effect
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Sintering
Low-temperature fired lead magnesium niobate, 12:45795 (BA;US)

Structural Chemical Analysis
Piezoelectric properties and microstructure of glass-ceramics in the BaO-SrO-SiO/sub 2/-TiO/sub 2/ system, 12:45801 (BA;US)
Temperature Effects
Dielectric aging effects in doped lead magnesium niobate: Lead titanate relaxor ferroelectric ceramics, 12:45804 (BA;US)
TITANIUM 48 REACTIONS
Charge-Exchange Reactions
Quasi-elastic transfer and charge-exchange reactions in collisions of /sup 48/Ti on /sup 42/Ca and /sup 26/Mg, 12:46662 (R;DE;In German)
Elastic Scattering
Quasi-elastic transfer and charge-exchange reactions in collisions of /sup 48/Ti on /sup 42/Ca and /sup 26/Mg, 12:46662 (R;DE;In German)
One-Nucleon Transfer Reactions
Quasi-elastic transfer and charge-exchange reactions in collisions of /sup 48/Ti on /sup 42/Ca and /sup 26/Mg, 12:46662 (R;DE;In German)
Two-Nucleon Transfer Reactions
Quasi-elastic transfer and charge-exchange reactions in collisions of /sup 48/Ti on /sup 42/Ca and /sup 26/Mg, 12:46662 (R;DE;In German)
TITANIUM 50 TARGET
Pion Plus Reactions
Double charge exchange to the double isobaric analog state at T/sub π/—292 MeV, 12:46661 (J;US)
TITANIUM ALLOYS
Evaporation
Vaporization rate and thermodynamic properties of titanium and vanadium germanides, 12:45723 (RA;SU;In Russian)
Machining
Recycle process for depleted-uranium machining chips by vacuum-induction remelt. Final report, 12:45114 (R;US)
Physical Radiation Effects
Neutron irradiation scoping study of twenty-five copper-base materials, 12:45751 (J;US)
Thermodynamic Properties
Vaporization rate and thermodynamic properties of titanium and vanadium germanides, 12:45723 (RA;SU;In Russian)
TITANIUM OXIDES
Electronic Structure
DSA RuO_2/TiO_2 electrode modeled by ion implantation: An in situ characterization by photoacoustic and photocurrent spectroscopy, 12:45808 (R;US)
Optical Properties
DSA RuO_2/TiO_2 electrode modeled by ion implantation: An in situ characterization by photoacoustic and photocurrent spectroscopy, 12:45808 (R;US)
Phase Transformations
DSA RuO_2/TiO_2 electrode modeled by ion implantation: An in situ characterization by photoacoustic and photocurrent spectroscopy, 12:45808 (R;US)
TLD (DOSEMETERS)
See THERMOLUMINESCENT DOSEMETERS
TLD SYSTEMS
See THERMOLUMINESCENT DOSEMETERS
TMPN

ORGANIC OXYGEN COMPOUNDS
TMR REACTORS
Breeding Blankets
Updated reference design of a liquid-metal-cooled tandem mirror fusion breeder, 12:46936 (J;US)
Design
Updated reference design of a liquid-metal-cooled tandem mirror fusion breeder, 12:46936 (J;US)
Shielding
Fusion reactor physics and technology studies: Final report, December 1, 1985 to June 15, 1986, 12:46907 (R;US)
Thermonuclear Reactor Cooling Systems
Fusion reactor physics and technology studies: Final report, December 1, 1985 to June 15, 1986, 12:46907 (R;US)
Wall Effects
Fusion reactor physics and technology studies: Final report, December 1, 1985 to June 15, 1986, 12:46907 (R;US)
TMX DEVICES
Charged-Particle Transport
Experimental results from TMX-U (Tandem Mirror Experiment-Update), 12:46871 (R;US)
Loss Cone Instability
Microstability of the TMX tandem mirror experiments, 12:46872 (R;US)
Plasma Microinstabilities
Microstability of the TMX tandem mirror experiments, 12:46872 (R;US)
Research Programs
Experimental results from TMX-U (Tandem Mirror Experiment-Update), 12:46871 (R;US)
Thermal Barriers
Experimental results from TMX-U (Tandem Mirror Experiment-Update), 12:46871 (R;US)
TOBACCO SMOKES
Mass Spectroscopy
Dual cell FTMS-A powerful tool for complex mixture analysis, 12:45880 (BA;US)
TOHOKU-1 REACTOR
See ONAGAWA-1 REACTOR
TOKAMAK DEVICES
See also DOUBLET-3 DEVICE
SPHEROMAK DEVICES
Beam Currents
Neutral-beam current drive in tokamaks, 12:46935 (J;US)
Beam Injection Heating
Momentum and thermal transport in neutral-beam-heated tokamaks, 12:46851 (R;US)
Collisional Heating
Neoclassical electron heat conduction in tokamaks performed by the ions, 12:46852 (R;US)
Computer-Aided Design
Numerical simulation of tokamaks: Ideal MHD [magnetohydrodynamics] equilibrium and stability, 12:46910 (R;US)
Computerized Simulation
Numerical simulation of tokamaks: Ideal MHD [magnetohydrodynamics] equilibrium and stability, 12:46910 (R;US)
Numerical simulations of plasmas, 12:46895 (B;US)
Confinement Time
Drift wave models of tokamak confinement, 12:46893 (BA;XA)
Design
Second regime tokamak operation at large aspect ratio, 12:46848 (R;US)
Drift Instability
Drift wave models of tokamak confinement, 12:46893 (BA;XA)
Energy Balance
Volt-second consumption in tokamaks with sawtooth activity, 12:46861 (R;US)
Equilibrium
Two and three dimensional tokamak equilibrium modifications driven by localized ICRF [ion cyclotron range of frequencies] ponderomotive force, 12:46864 (R;US)
Heat Flux
Division of Development and Technology Plasma/Materials Interaction and High Heat Flux Materials and Components Task Groups: Report on the joint meeting, July 9, 1986, 12:46900 (R;US)
ICR Heating
Two and three dimensional tokamak equilibrium modifications driven by localized ICRF [ion cyclotron range of frequencies] ponderomotive force, 12:46864 (R;US)
Kink Instability
Ponderomotive stabilization of external kink modes in tokamaks, 12:46863 (R;US)
Magnetic Flux
Volt-second consumption in tokamaks with sawtooth activity, 12:46861 (R;US)
Materials Testing
Division of Development and Technology Plasma/Materials Interaction and High Heat Flux Materials and Components Task Groups: Report on the joint meeting, July 9, 1986, 12:46900 (R;US)

Plasma-wall interaction data needs critical to a Burning Core Experiment (BCX), 12:46898 (R;US)
Mathematical Models
Numerical simulations of plasmas, 12:46895 (B;US)
MHD Equilibrium
Recent improvements to the GATO MHD [magnetohydrodynamics] stability package, 12:46855 (R;US)
Plasma Confinement
Division of Development and Technology Plasma/Materials Interaction and High Heat Flux Materials and Components Task Groups: Report on the joint meeting, July 9, 1986, 12:46900 (R;US)
Mechanism for rapid sawtooth crashes in tokamaks, 12:46887 (J;US)
Plasma Diagnostics
Numerical simulations of plasmas, 12:46895 (B;US)
Two and three dimensional tokamak equilibrium modifications driven by localized ICRF [ion cyclotron range of frequencies] ponderomotive force, 12:46864 (R;US)
Plasma Disruption
Hamiltonian four-field model for nonlinear tokamak dynamics, 12:46878 (J;US)
Plasma Heating
Study of directly launched ion Bernstein waves in a tokamak, 12:46883 (J;US)
Plasma Pressure
Mechanism for rapid sawtooth crashes in tokamaks, 12:46887 (J;US)
Plasma Simulation
Hamiltonian four-field model for nonlinear tokamak dynamics, 12:46878 (J;US)
Research Programs
[Plasma properties: Annual report], 12:46849 (R;US)
Transport Theory
Second regime tokamak operation at large aspect ratio, 12:46848 (R;US)
Wall Effects
Division of Development and Technology Plasma/Materials Interaction and High Heat Flux Materials and Components Task Groups: Report on the joint meeting, July 9, 1986, 12:46900 (R;US)
Plasma-wall interaction data needs critical to a Burning Core Experiment (BCX), 12:46899 (R;US)
Plasma-wall interaction data needs critical to a Burning Core Experiment (BCX), 12:46898 (R;US)

TOKAMAK FUSION TEST REACTOR
See TFTR TOKAMAK

TOKAMAK TYPE REACTORS
See also DOUBLET REACTORS
PLT DEVICES
TFTR TOKAMAK
TIBER-X TOKAMAK
Beam Currents
Use of polarimetry to measure the current profile in MTX, 12:46869 (R;US)
Chemical Reaction Kinetics
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
Energy Losses
Problems in modeling TF ripple loss of fast alphas from a tokamak reactor, 12:46842 (R;US)
Plasma Diagnostics
Use of polarimetry to measure the current profile in MTX, 12:46869 (R;US)
Polarimeters
Use of polarimetry to measure the current profile in MTX, 12:46869 (R;US)
Reactor Operation
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
Reactor Physics
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)
Reactor Safety
NAIG [Nippon Atomic Industry Group] annual review, 1984, 12:45488 (R;JP)

TOKYO-3 REACTOR
See FUKUSHIMA-3 REACTOR

TOLUENE
Mass Spectroscopy
Tandem quadrupole/time-of-flight mass spectrometer for application to environmental analyses, 12:45887 (BA;US)

TOOLS
Not for EDUCATIONAL TOOLS.
Design
Remote tool development at the Interim Examination and Maintenance (IEM) cell, 12:45426 (R;US)

TORSATRON STELLARATOR
See also ATF TORSATRON
Magnetic Surfaces
Magnetic surface mapping with highly transparent screens on the Auburn Torsatron, 12:46846 (R;US)

TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS

TOWER FOCUS POWER PLANTS
Technology Assessment
Assessment of central receiver solar thermal enhanced oil recovery systems, 12:45261 (R;US)

TOXIC MATERIALS
See also TOXINS
Carcinogens
Health assessment of exposure to developmental toxicants, 12:45543 (R;US)
Mutagens
Health assessment of exposure to developmental toxicants, 12:45543 (R;US)
Regulations
RTECS (Registry of Toxic Effects of Chemical Substances) regulatory subfile. Regulations, recommendations, and assessments (for microcomputers). Data file, 12:45540 (R;US)
Risk Assessment
Risk assessment, management, communication: a guide to selected sources. Update. Information guide, 12:45541 (R;US)
Standards
RTECS (Registry of Toxic Effects of Chemical Substances) regulatory subfile. Regulations, recommendations, and assessments (for microcomputers). Data file, 12:45540 (R;US)

TOXINS
Labelled Compounds
Synthesis of radiolabeled mycotoxins. Annual report, 1 December 1985-30 November 1986, 12:46264 (R;US)

TRANSALASKA PIPELINE
See ALASKA OIL PIPELINE

TRANSDUCERS
Fabrication
SAW transduction in electrostrictive substrates, 12:45803 (BA;US)
Piezoelectricity
SAW transduction in electrostrictive substrates, 12:45803 (BA;US)
Sound Waves
SAW transduction in electrostrictive substrates, 12:45803 (BA;US)

TRANSFER (ELECTRON)
See ELECTRON TRANSFER

TRANSFER (HEAT)
See HEAT TRANSFER

TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION

TRANSFER (MASS)
See MASS TRANSFER

TRANSFORMER OILS
See INSULATING OILS

TRANSFORMERS
Acoustic Measurements
Evaluation of an acoustic resonance temperature sensor for transformers: Final report, 12:45327 (R;US)
Insulating Oils
Bubble formation in transformers: Final report, 12:45328 (R;US)
Performance Testing
Evaluation of an acoustic resonance temperature sensor for transformers: Final report, 12:45327 (R;US)

Temperature Effects
Evaluation of an acoustic resonance temperature sensor for transformers: Final report, 12:45327 (R;US)
TRANSFRONTIER CONTAMINATION
For radioactive contamination only; for nonradioactive pollution use TRANSFRONTIER POLLUTION.
Dose Equivalents
Consequences of the Chernobyl reactor accident for the Munich area, 12:46204 (R;DE;In German)
Radiation Doses
Consequences of the Chernobyl reactor accident for the Munich area, 12:46204 (R;DE;In German)
TRANSIENT REACTOR TEST FACILITY
See TREAT REACTOR
TRANSIENT SPECIES

Biological Radiation Effects
Forest decline, natural and technically generated radioactivity. Expertise on possible relations between effluent radioactive rare gas from nuclear plants and forest decline and regarding the comparability of natural and artificial radioactivity, 12:46280 (R;DE;In German)
Radioactivity
Forest decline, natural and technically generated radioactivity. Expertise on possible relations between effluent radioactive rare gas from nuclear plants and forest decline and regarding the comparability of natural and artificial radioactivity, 12:46280 (R;DE;In German)
TRICHLOROACETALDEHYDE
See CHLORAL
TRIPLET PARTICLES
See QUARKS
TRITIUM
Air Pollution Monitoring
Differential atmospheric tritium sampler, 12:46193 (BA;US)
Mound tritium stack air measurements - An update, 12:46189 (BA;US)
Isotopic Exchange
Distribution of protamines 1 and 2 in mammals and implications with respect to protamine gene expression, 12:45888 (BA;US)
Radioecological Concentration
Differential atmospheric tritium sampler, 12:46193 (BA;US)
Mound tritium stack air measurements - An update, 12:46189 (BA;US)
Site surveillance and maintenance program for Palos Park: Report for 1986, 12:45153 (R;US)
Scintillation Counting
Computerized liquid scintillation assay of tritiated water and wipe test samples with a three-channel beta spectrometer, 12:45856 (RA;IL)
TROMBE WALLS
International Energy Agency solar heating and cooling programme. Task VIII. Passive and hybrid solar low energy buildings. Simulation model validation using test cell data, 12:45263 (R;DK)
TROUT
Population Dynamics
Evaluation of management of water releases for Painted Rocks Reservoir, Bitterroot River, Montana: Final report, 12:45225 (R;US)

TRU WASTES
See ALPHA-BEARING WASTES
TUBES
For objects of tubular shape; not for DRIFT TUBES, ELECTRON TUBES or IMAGE STORAGE TUBES.
Creep
Calculation of creep deformation and stresses in thick-walled pipes, 12:45724 (R;DE;In German)
Intergranular Corrosion
Intergranular attack of alloy 600 tubing: Simulation tests: Interim report, 12:45341 (R;US)
Mechanisms for formation and disruption of surface oxides: Final report, 12:45339 (R;US)
Mechanical Vibrations
Damping characteristics of a composite-reinforced stainless-steel tube, 12:46023 (R;US)
TUBES (CONDUITS)
See PIPES
TUFF
Radionuclide Migration
Analysis and predictions of water and solute transport in a large lysimeter, 12:46227 (RA;US)
Finite element simulation of moisture movement and solute transport in a large caisson, 12:46230 (RA;US)
Panel summary report, 12:46231 (RA;US)
Time and frequency domain analysis of tracer migration in crushed tuff, 12:46229 (RA;US)
TUMORS
See NEOPLASMS
TUNGSTATES
Formation Heat
Formation enthalpy of gaseous indium and thallium molybdates and thallium tungstate, 12:45925 (RA;SU;In Russian)
TUNGSTEN
Electron Emission
Emission characteristics of the ZrO/W thermal-field electron source, 12:46405 (R;US)
TUNGSTEN 182 TARGET
Sulfur 32 Reactions
Distribution of reaction strength in /sup 32/S+/sup 182/W collisions, 12:46674 (J;US)
TUNGSTEN 183
Lifetime
Quantum interference measurement using microfoil conversion electron (MICE) detection, 12:46675 (J;US)
Moessbauer Effect
Resolution analyses for Moessbauer diffraction: resolved TDS profiles in silicon, 12:46803 (J;US)
TUNGSTEN COMPLEXES
X-Ray Spectroscopy
EXAFS spectroelectrochemistry of coordination complexes in non-aqueous solutions, 12:45876 (BA;US)
TURBINE BLADES
Corrosion
Effects of injection on condensation on a film-cooled surface, 12:46048 (B;US)
Erosion
Temperature effect on particle dynamics and erosion in radial inflow turbine, 12:46047 (B;US)
Temperature Effects
Temperature effect on particle dynamics and erosion in radial inflow turbine, 12:46047 (B;US)
Thermal Stresses
Water-cooled gas turbine blade (Part 1), 12:45309 (R;JP;In Japanese)
Vapor Condensation
Effects of injection on condensation on a film-cooled surface, 12:46048 (B;US)
TURBOCHARGERS
Fabrication
Exploratory development of a twin-spool turbocharger for a high-output diesel engine. Final report, September 1983-June 1986, 12:45690 (R;US)
Testing
Exploratory development of a twin-spool turbocharger for a high-output diesel engine. Final report, September 1983-June 1986, 12:45690 (R;US)
TURBOMACHINERY
Aerodynamics
Aeroelasticity in axial-flow turbomachines. Volume 1: unsteady turbomachinery aerodynamics, 12:46013 (R;FR)
Energy Efficiency
Power recovery in process plants using Radial Inflow Turbines, 12:45679 (RA;GB)
Fluid Mechanics
Time-dependent processes and damage detection in thermal system components. Progress report: Second half of 1983 to first half of 1986, 12:45314 (R;DE;In German)
Seals
Straight cylindrical seal for high-performance turbomachines, 12:45978 (R;US)
TURBULENCE
Nonlinear Problems
Dimension densities for turbulent systems with spatially decaying correlation functions, 12:46477 (R;US)
TURBULENT FLOW
Fluctuations
Pressure gradient alignment with strain rate and scalar gradient in simulated Navier—Stokes turbulence, 12:46485 (J;US)
Heat Transfer
Momentum and thermal transport in neutral-beam-heated tokamaks, 12:46851 (R;US)
Momentum Transfer
Momentum and thermal transport in neutral-beam-heated tokamaks, 12:46851 (R;US)
Pressure Gradients
Pressure gradient alignment with strain rate and scalar gradient in simulated Navier—Stokes turbulence, 12:46485 (J;US)
TURKEY
Air Pollution
Situation and control of air pollution in Ankara/Turkey, 12:44915 (R;XU)
Air Pollution Control
Situation and control of air pollution in Ankara/Turkey, 12:44915 (R;XU)
TURNIPS
See BRASSICA
TURTLES
Environmental Impacts
Study of the effects of oil on marine turtles, 12:46312 (R;US)
Study of the effects of oil on marine turtles. Volume 1. Executive summary. Final report, 30 September 1983-1 October 1985, 12:46313 (R;US)
Study of the effects of oil on marine turtles. Volume 2. Technical report. Final report, 30 September 1983-1 October 1985, 12:46314 (R;US)
Study of the effects of oil on marine turtles. Volume 3. Appendices. Final report, 30 September 1983-1 October 1985, 12:46315 (R;US)
TWO-PHASE FLOW
Mathematical Models
Theoretical and empirical study of single-substance, upward two-phase flow in a constant-diameter adiabatic pipe, 12:45293 (R;US)

WWER-3 REACTOR
Reactor Safety
Investigations of the dispersion, concentration, and isotope ratio of aerosols of nuclear power plants in operation, 12:46188 (RA;DD;In Russian)
WWER-440 REACTOR
See WWER-3 REACTOR

X

X RADIATION
Cell Killing
Ionizing radiation-induced DNA damage. Its detection and relevance to cellular lethality, 12:46289 (RA;JP;In Japanese)
Mathematical Models
Influence of the vertical density profile on the detectable scattering quantum number in very simplified forward and backward scattering models for quantum radiation. 1. Calculation of mean values, 12:45184 (RA;DD;In German)
Scattering
Influence of the vertical density profile on the detectable scattering quantum number in very simplified forward and backward scattering models for quantum radiation. 1. Calculation of mean values, 12:45184 (RA;DD;In German)
X-2220 RESONANCES
Gluon Model
Test of the transverse magneticity of the $\xi(2.23)$, 12:46556 (R;XA)
Helicity
Test of the transverse magneticity of the $\xi(2.23)$, 12:46556 (R;XA)
XENON
Acoustic Measurements
Laser optogalvanic and photoacoustic studies of some atoms and small molecules, 12:46418 (R;US)
Dissolution
Thermodynamics of dissolution of Xe, O_2 and NH_3 in solvents with different structural features at 278-318 K, 12:45927 (RA;SU;In Russian)
Electron Drift
Low energy electron drift and scattering in krypton and xenon, 12:46408 (R;US)
Electron-Atom Collisions
Study on the xenon radiation ultrasoft X-ray spectra in the 52-94 eV photon energy range, 12:46422 (R;SU;In Russian)
Laser Spectroscopy
Laser optogalvanic and photoacoustic studies of some atoms and small molecules, 12:46418 (R;US)
Luminescence
Electric field dependence of the total excimer luminescence of xenon excited below the atomic ionization limit, 12:46413 (RA;US)
Photoionization
Electric field dependence of the total excimer luminescence of xenon excited below the atomic ionization limit, 12:46413 (RA;US)
Scattering
Low energy electron drift and scattering in krypton and xenon, 12:46408 (R;US)
X-Ray Spectra
Study on the xenon radiation ultrasoft X-ray spectra in the 52-94 eV photon energy range, 12:46422 (R;SU;In Russian)
XENON 128
De-Excitation
Study of the nuclear structure of /sup 128/Xe by means of the (α,n) reaction at threshold, 12:46667 (R;DE;In German)
M1-Transitions
M1 transitions between collective levels and F-spin purity, 12:46685 (R;US)
Rotational States
Study of the nuclear structure of /sup 128/Xe by means of the (α,n) reaction at threshold, 12:46667 (R;DE;In German)
XENON IONS
Electron-Ion Collisions
Resonance enhancement of electron collision rates for fluorinelike ions, 12:46445 (J;US)
X-Ray Spectra
Time-resolved measurements of short-wavelength fluorescence from x-ray-excited ions, 12:46449 (J;US)
XI NEUTRAL
Radiative Decay
Branching ratio of $\Xi^0 \rightarrow \Lambda\gamma$, a weak radiative hyperon decay, 12:46521 (BA;US)
Weak Hadronic Decay
Branching ratio of $\Xi^0 \rightarrow \Lambda\gamma$, a weak radiative hyperon decay, 12:46521 (BA;US)
XI PARTICLES
See also XI NEUTRAL
Particle Identification
A search for the $\xi(2.2)$ in p-barp formation, 12:46538 (BA;US)
Particle Production
A search for the $\xi(2.2)$ in p-barp formation, 12:46538 (BA;US)
XI-NEUTRAL
See XI NEUTRAL
X-RASERS
See X-RAY LASERS
X-RAY DETECTION
Li-Drifted Si Detectors
Semiconductor detector performance for low-energy x-rays, 12:46130 (R;US)
Photodetectors
X-ray photoelectric detectors with conical cathodes: Sensitivity to beam divergence, 12:46117 (R;US)
X-RAY DIFFRACTION
Microdiffraction with synchrotron radiation, 12:46796 (J;NL)
X-RAY DOSIMETRY
Calorimetric Dosemeters
Thin-foil x-ray dosimeters with millisecond response time dose and heat-flow calculations, 12:46118 (R;US)
X-RAY EQUIPMENT
See also X-RAY SOURCES

Safety
Controlling laboratory conditions and preventing the problem: The health physicist's viewpoint, 12:45976 (R;US)
X-Ray Dosimetry
Dosimetry of x-ray beams: The measure of the problem, 12:46294 (R;US)
X-RAY FLUORESCENCE ANALYZERS
Design
Development of an x-ray fluorescence microprobe at the National Synchrotron Light Source, Brookhaven National Laboratory: Early results: Comparison with data from other techniques, 12:46102 (R;US)
Sensitivity
Development of an x-ray fluorescence microprobe at the National Synchrotron Light Source, Brookhaven National Laboratory: Early results: Comparison with data from other techniques, 12:46102 (R;US)
X-RAY LASERS
Computerized Simulation
Studies of new geometries for x-ray lasers, 12:46006 (RA;US)
Feasibility Studies
X-ray gain in neonlike ions from inner-shell ionization of sodiumlike ions by suprathermal electrons, 12:46011 (J;US)
Research Programs
Atomic data for highly charged ions. Applications to X-ray laser design and thermonuclear fusion, 12:46889 (J;NL)
LLE [Laboratory for Laser Energetics] review: Volume 30: Quarterly report, January-March 1987, 12:46003 (R;US)
X-RAY RADIOGRAPHY
Radiation Accidents
Analysis of unusual occurrences in the field of radiography and anti-emergency measures derived therefrom, 12:45512 (RA;DD;In German)
Resolution
X-ray microscopy of inertial fusion targets using a laser-produced plasma as an x-ray source, 12:46004 (RA;US)
X-RAY SOURCES
For cosmic sources of x radiation use COSMIC X-RAY SOURCES.
Design
Generating soft x-ray spectra using the SPEED pentaxial diode, 12:46061 (R;US)
Saturn: A large area x-ray simulation accelerator, 12:46063 (R;US)
Operation
Generating soft x-ray spectra using the SPEED pentaxial diode, 12:46061 (R;US)
X-RAY SPECTROMETERS
Design
Ion-induced X-ray studies with a high luminosity von Hamos crystal spectrometer, 12:46122 (J;NL)
Performance
Ion-induced X-ray studies with a high luminosity von Hamos crystal spectrometer, 12:46122 (J;NL)
X-RAY SPECTROSCOPY
Correlation Functions
Mathematical description of properties of a weakly deformed Gauss peak. 2. Calculation of the modified correlation function of two weakly deformed Gauss peaks, 12:45860 (RA;DD;In German)
Mathematical description of properties of a weakly deformed Gauss peak. 3. Prove of the density function property of the modified correlation function, 12:46708 (RA;DD;In German)
Gauss Function
Mathematical description of properties of a weakly deformed Gauss peak. 1. Calculation of the moment generating function and the higher moments, 12:45861 (RA;DD;In German)
Mathematical Models
Mathematical description of properties of a weakly deformed Gauss peak. 2. Calculation of the modified correlation function of two weakly deformed Gauss peaks, 12:45860 (RA;DD;In German)
Mathematical description of properties of a weakly deformed Gauss peak. 3. Prove of the density function property of the modified correlation function, 12:46708 (RA;DD;In German)
Mathematical description of properties of a weakly deformed Gauss peak. 1. Calculation of the moment generating function and the higher moments, 12:45861 (RA;DD;In German)

Y

YANG-MILLS THEORY
Conservation Laws
Geometrical-integrability constraints and equations of motion in four plus extended super spaces, 12:46838 (BA;US)
Equations of Motion
Geometrical-integrability constraints and equations of motion in four plus extended super spaces, 12:46838 (BA;US)
Gauge Invariance
Yang-Mills theory and quantum chromodynamics in the temporal gauge, 12:46620 (J;US)
Supersymmetry
Higher derivative super Yang-Mills theories, 12:46586 (R;XA)
YANKEE CONNECTICUT REACTOR
See CONNECTICUT YANKEE REACTOR
YANKEE VERMONT REACTOR
See VERMONT YANKEE REACTOR
YEASTS
Biological Radiation Effects
Stochastic models for cells exposed to ionizing radiation, 12:46273 (R;US)
YOSHIDA SARCOMA
See EXPERIMENTAL NEOPLASMS
YTTERBIUM ALLOYS
Solution Heat
Solution enthalpy of ytterbium and lutetium in germanium, 12:45719 (RA;SU;In Russian)
YTTERBIUM OXIDES
Microstructure
Microstructure and properties of YBa2Cu3O/sub 9-//sub δ/ superconductors with transitions at 90 and near 290 K, 12:45774 (J;US)
Superconductivity
Microstructure and properties of YBa2Cu3O/sub 9-//sub δ/ superconductors with transitions at 90 and near 290 K, 12:45774 (J;US)
YTTRIUM 89
Hypernuclei
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)
YTTRIUM 89 TARGET
Pion Plus Reactions
Kaon-nucleus reactions and hypernuclei, 12:46654 (R;US)
YTTRIUM ALLOYS
Magnetic Properties
Relationships between local order and magnetic behavior in amorphous Fe/sub 0.30/Y/sub 0.70/: Extended x-ray-absorption fine structure and susceptibility, 12:45748 (J;US)
Order Parameters
Relationships between local order and magnetic behavior in amorphous Fe/sub 0.30/Y/sub 0.70/: Extended x-ray-absorption fine structure and susceptibility, 12:45748 (J;US)
YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES
FERRITE GARNETS
YTTRIUM COMPOUNDS
YTTRIUM COMPLEXES
Sublimation Heat
Thermodynamic properties of aluminium, chromium, yttrium and zirconium acetylacetonates, 12:45916 (RA;SU;In Russian)
YTTRIUM COMPOUNDS
See also YTTRIUM OXIDES
Chemical Reactions
Evaluation of laser desorbed transition-metal ions as analytical chemical ionization reagents by pattern recognition, 12:45870 (J;US)

Electric Conductivity
Freestanding films of YBa_2Cu_3O/sub 6.9/, 12:46807 (R;US)
On the rf surface resistance of the perovskite superconductors at 3 GHz, 12:46806 (R;US)
Magnetic Properties
Freestanding films of YBa_2Cu_3O/sub 6.9/, 12:46807 (R;US)
Magnetic Susceptibility
On the rf surface resistance of the perovskite superconductors at 3 GHz, 12:46806 (R;US)

YTTRIUM OXIDES
Coatings
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa_2Cu_3O/sub 6.9/, 12:45773 (J;US)
Critical Current
Superconducting properties of aligned crystalline grains of $Y_1Ba_2Cu_3O$/sub 7-//sub δ/, 12:45785 (J;US)
Critical Field
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Crystal Structure
Structural and dynamical studies of δ-Bi_2O^3 oxide ion conductors. III. Phase relationships in the system (Bi_2O_3)/sub 1-x/(M_2O_3)/sub x/ as a function of pressure and temperature (M = Y, Er, or Yb), 12:45788 (J;US)
Crystallization
Enthalpy of crystallization of rare earth ferrite garnets, 12:45913 (RA;SU;In Russian)
Crystal-Phase Transformations
Oxygen ordering and the orthorhombic-to-tetragonal phase transition in YBa_2Cu_3O/sub 7-//sub x/, 12:45776 (J;US)
Current Density
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Deposition
High damage threshold optical coatings, 12:45848 (BA;US)
Electric Conductivity
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Electron-Electron Coupling
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Electronic Structure
Unoccupied electronic states and surface phenomena for YBa_2Cu_3O/sub 6.9/, 12:45777 (J;US)
Grain Orientation
Superconducting properties of aligned crystalline grains of $Y_1Ba_2Cu_3O$/sub 7-//sub δ/, 12:45785 (J;US)
Hall Effect
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Interfaces
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa_2Cu_3O/sub 6.9/, 12:45773 (J;US)
Isotope Effects
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
Observation of an oxygen isotope effect in $YBa_2Cu_3O_7$, 12:45775 (J;US)
Magnetic Susceptibility
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Magnetization
Large anisotropic critical magnetization currents in single-crystal YBa_2Cu_3O/sub 7-//sub δ/, 12:45784 (J;US)
Microstructure
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)
Mixing
Reaction and intermixing at metal-superconductor interfaces: Fe/YBa_2Cu_3O/sub 6.9/, 12:45773 (J;US)
Optical Properties
High damage threshold optical coatings, 12:45848 (BA;US)
Order-Disorder Transformations
Oxygen ordering and the orthorhombic-to-tetragonal phase transition in YBa_2Cu_3O/sub 7-//sub x/, 12:45776 (J;US)
Phase Studies
Structural and dynamical studies of δ-Bi_2O^3 oxide ion conductors. III. Phase relationships in the system (Bi_2O_3)/sub 1-x/(M_2O_3)/sub x/ as a function of pressure and temperature (M = Y, Er, or Yb), 12:45788 (J;US)
Superconductivity
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
Electrical properties of high T/sub c/ superconductors under high pressures (LaBaCuO, LaSrCuO, YBaCuO), 12:45813 (R;US)
Observation of an oxygen isotope effect in $YBa_2Cu_3O_7$, 12:45775 (J;US)
Superconducting properties of aligned crystalline grains of $Y_1Ba_2Cu_3O$/sub 7-//sub δ/, 12:45785 (J;US)
Thermoelectric Properties
Normal-state properties of ABa_2Cu_3O/sub 7-//sub y/ compounds (A = Y and Gd): Electron-electron correlations, 12:45779 (J;US)
Transition Heat
Enthalpy of crystallization of rare earth ferrite garnets, 12:45913 (RA;SU;In Russian)
Transition Temperature
Complete absence of isotope effect in $YBa_2Cu_3O_7$: Consequences for phonon-mediated superconductivity, 12:45783 (J;US)
Experiments concerning the connective nature of superconductivity in $YBa_2Cu_3O_7$, 12:45772 (J;US)

Z

ZENER DIODES
See JUNCTION DIODES
ZEOLITES
Encapsulation
Encapsulation of noble gas in zeolites, 12:45125 (R;DE;In German)
Radioactive Waste Processing
Encapsulation of noble gas in zeolites, 12:45125 (R;DE;In German)
Rare Gases
Encapsulation of noble gas in zeolites, 12:45125 (R;DE;In German)
ZINC
Chemical Reactions
Chemical behavior of zinc in cover gas environments, 12:45355 (RA;XE)
Dislocations
Positron-dislocation interaction in deformed Zn and Cd, 12:46759 (RA;DD)
Emission Spectroscopy
Characterization of Rio Blanco retort 1 water following treatment by lime-soda softening and reverse osmosis, 12:45039 (R;US)
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
Gas Chromatography
Process off-gas characterization experiments for block reactor runs 10 and 12, 12:45041 (R;US)
ZINC 67 TARGET
Neutron Reactions
Measurement of /sup 67/Zn (n,α) /sup 64/Ni reaction thermal cross section and its interpretation in the framework of the Reich-Moore multilevel formalism, 12:46665 (R;SU;In Russian)
ZINC COMPOUNDS
See also ZINC OXIDES

Chemical Preparation
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Chemical Reaction Kinetics
Use of a computer controlled flow injection analysis system for the rapid on-line determination of distribution coefficients, 12:45878 (BA;US)
Crystal Growth
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Dielectric Properties
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Piezoelectricity
Dielectric and piezoelectric properties of Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-PbTiO/sub 3/-BaTiO/sub 3/ ceramics, 12:45802 (BA;US)
Pyroelectric Effect
Growth, dielectric and pyroelectric properties of 0.9Pb(Zn/sub 1/3/Nb/sub 2/3/)O/sub 3/-0.1PbTiO/sub 3/ single crystals, 12:45798 (BA;US)
Solvent Extraction
Use of a computer controlled flow injection analysis system for the rapid on-line determination of distribution coefficients, 12:45878 (BA;US)

ZINC OXIDES
Chemical Preparation
Process for the chemical preparation of high-field ZNO varistors, 12:45846 (P;US)

ZIRCALOY
For unspecified Zircaloy alloys.
Diffusion Welding
Texture in ZIRCALOY-clad uranium, 12:45759 (J;US)

ZIRCONIUM
Photonuclear Reactions
Absolute photoneutron cross sections for Zr, I, Pr, Au, and Pb, 12:46669 (J;US)

ZIRCONIUM 90 TARGET
Nuclear Quadrupole Resonance
Isospin structure of giant resonances from pion inelastic scattering, 12:46664 (J;US)
Pion Reactions
Isospin structure of giant resonances from pion inelastic scattering, 12:46664 (J;US)

ZIRCONIUM ALLOYS
Formation Heat
Thermodynamic characteristics of aluminium-scandium and zirconium-silicon binary alloys, 12:45720 (RA;SU;In Russian)
Physical Radiation Effects
Neutron irradiation scoping study of twenty-five copper-base materials, 12:45751 (J;US)
Solution Heat
Thermodynamic characteristics of aluminium-scandium and zirconium-silicon binary alloys, 12:45720 (RA;SU;In Russian)

ZIRCONIUM CHLORIDES
Chemical Preparation
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)
Crystal Structure
Cation distributions within a cluster framework. Synthesis and structure of the carbon- and boron-centered zirconium cluster compounds $KZr_6Cl_{15}C$ and $CsKZr_6Cl_{15}B$, 12:45932 (J;US)
Formation Heat
Formation enthalpy of zirconium monochloride, 12:45911 (RA;SU;In Russian)

ZIRCONIUM COMPLEXES
Sublimation Heat
Thermodynamic properties of aluminium, chromium, yttrium and zirconium acetylacetonates, 12:45916 (RA;SU;In Russian)

ZIRCONIUM OXIDES
Electron Emission
Emission characteristics of the ZrO/W thermal-field electron source, 12:46405 (R;US)

ZPPR REACTOR
Control Elements
Reaction rate and control rod analysis in a large heterogeneous core ZPPR-13A, 12:45414 (RA;JP)
Nuclear Reaction Kinetics
Reaction rate and control rod analysis in a large heterogeneous core ZPPR-13A, 12:45414 (RA;JP)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form DE82000001 or TI82000001 appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the document quality for microfiche (MF) and printed copy (PC) production: 1 = 92 to 95% legibility, available PC and MF; 2 = 88 to 91% legibility, available MF only; 3 = 87% or less legibility, available PC only. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS).

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE87003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) and other price codes are for domestic users; prices for foreign purchasers are, in most instances, twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($6.50).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters, and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico, please use this price schedule; other addressees, write for PR-360-4.

MICROFICHE		EXCEPTIONAL		MAGNETIC TAPES		DISKETTES	
A01	$6.50	E01	$7.50	T01	$150.00	D01	$ 50

PRICES EFFECTIVE JANUARY 1, 1987

U. S. DEPARTMENT OF COMMERCE

National Technical Information Service

5285 Port Royal Road, Springfield, Virginia 22161

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., 87-22,350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

DOE CURRENT AWARENESS BULLETINS

TIMELY INFORMATION FOR RESEARCHERS IN SPECIALIZED SUBJECT AREAS

To keep science, industry, the government, and the public up to date on worldwide energy literature, the DOE Office of Scientific and Technical Information publishes a series of Current Awareness Bulletins on various aspects of energy production and use. The information abstracted in these bulletins comes from scientific and technical reports, journal articles, conference papers and proceedings, patents, theses, books, and monographs. The semimonthly bulletins are:

ACID PRECIPITATION (PB87-901000) Wet and dry deposition, long-range transport, environmental effects, modeling, and socioeconomic factors.

BUILDINGS ENERGY TECHNOLOGY (PB87-900700) Technology required for economic energy conservation in buildings of all types.

COAL-BASED SYNFUELS (PB87-901400) Conversion of coal to gaseous or liquid fuels.

COAL COMBUSTION AND UTILIZATION (PB87-914400) All aspects of coal combustion and direct utilization, including fluidized-bed combustion, MHD generators, and coal fuel cells.

COAL PREPARATION AND POLLUTION CONTROL (PB87-900800) Coal cleaning and the technology of reducing air pollution from the direct combustion of coal.

DIRECT ENERGY CONVERSION (PB87-946600) Photovoltaic conversion, magnetohydrodynamics, electrohydrodynamics, thermoelectric generators, thermionic converters, fuel cells, etc.

ENERGY FROM BIOMASS (PB87-900600) Biomass production, conversion, and use for energy.

GEOTHERMAL ENERGY TECHNOLOGY (PB87-914700) Technology required for economic recovery of geothermal energy and its use, either directly or to produce electricity.

HEAVY-ION REACTIONS (PB87-900500) All aspects of heavy-ion ($A > 4$) reactions.

LASER RESEARCH (PB87-901100) Research and development, excluding applications.

NUCLEAR FUEL CYCLE (PB87-913400) Uranium reserves, ore exploration, mining, processing, and enrichment; spent-fuel reprocessing; nuclear materials management and safeguards; nuclear fuel fabrication and properties; and environmental and health and safety aspects.

NUCLEAR REACTOR SAFETY (PB87-913500) Accident analysis, safety systems, radiation protection, decommissioning and dismantling, and security measures.

RADIOACTIVE WASTE MANAGEMENT (PB87-902900) Spent-fuel transport and storage, radioactive effluents from nuclear facilities, techniques of processing radioactive wastes, and ultimate disposal of the wastes.

SOLAR THERMAL ENERGY TECHNOLOGY (PB87-901200) Research and development relating to the use of solar thermal systems as a significant energy source.

TRANSPORTATION ENERGY RESEARCH (PB87-900900) Engineering and design of energy-efficient automotive propulsion systems and all aspects of energy conservation in transportation.

UNCONVENTIONAL PETROLEUM (PB87-901300) Secondary and tertiary recovery of petroleum and oil shales and tar sands.

Bulletins are available by subscription from the National Technical Information Service, U. S. Department of Commerce, Springfield, VA 22161. Subscription rates for one year (24 issues) are $80.00 for domestic subscribers and $160.00 for subscribers outside the United States, Canada, and Mexico. Use the order number given in parentheses after the bulletin title.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
